Species	Date(s) Observed	Spawning	Rearing	Migration
Arctic Charr	9/27/89	X		

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

- A male (355 mm) and female (278 mm) were captured by electrofishing - spawning behavior was not observed but they were in spawning colors and condition (male ripe)
- The fish were holding beneath an overhung cut-bank.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
