OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho	11/13/02	Yes (31)			☑
					☐
					☐
					☐
					☐

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Aerial survey flow on 11/13/02 in a supercub. Observed 31 live and 2 carcasses in this branch of the river. Many of the coho were paired up and on spawning redds. Currently this reach of Clear Creek is classified in the catalog for coho rearing only. Attached is a map showing the area where the spawning coho were observed. Richardson Clearwater River is the local name and refered to as such in most ADF&G reports for this Clear Creek.
