Public Review Nomination for Waters
Important to Anadromous Species

☐ Addition X Correction ☐ Deletion

Name of Waterbody (if known): 306-70-10800
(Campers Cove)

Location:

Anadromous Waters Catalog Volume and Number SW III

USGS 1:63,360 Quadrangle _____

or 1:250,000 (if 1:63,360 not available) Adak

Species	Date(s) Observed	Stage(s) (Spawning, Rearing, Migration)

Comments: Please provide any clarifying information in addition to identification on Anadromous Waters Catalog Public Review Maps.

Stream was drafted too long. Please correct upper point. Reference map + memo from Pat Holmes and original nomination form. + map.

Department of Fish & Game - Kodiak

SUBJECT: November 2 & 7 Telephone Conversations

Thanks for your assistance in clarifying the "numbering" problem for some of the Attu Island streams. It was good to learn that your staff had changed the numbering sequence on some of the streams in order to provide number consistency. I was afraid that I had "buggered up" the system when I edited my board report information for last year's stream nominations.

I would like to suggest that you consider reapplying the streams on Attu which were designated in the original catalog but were deleted when the first computerized version was generated. Judging from my experience they all should have Dolly Varden and quite likely pink salmon. As far as the question of the length of the stream utilized by anadromous species, your cartographer could trace the stream channel to the first 200 foot contour line. We were unfortunately unable to examine the streams during our 1982 study. I feel that it would be best to provide the anadromous classifications for these streams. Please note attached, Figure. .

There have been some rumors of a potential land exchange at Attu. If a change in land ownership status were to occur it would be advantageous to assure protection of anadromous streams.

In reference to our discussion on the Stream Atlas, I believe that you could obtain better contract on your charts if your cartographer outlined the masters for major islands in the chain with an "0" rapidograph. You also might look into black line copies for your atlas reproductions. Several years ago we changed over to "black line" from "blue line" for our chart work, and were quite pleased with the product.

The catalog could be improved if its printout could be programmed to list the islands in geographic order to correspond with the order of the Atlas. There is a "glitch" in the present program which lists all longitude west of 180° in an accumulative order. For example, 179° east longitude is listed as 181° west longitude ect.

In several cases the statistical areas overlap two or more islands. This occurs between Tanaga/Kanaga, Kanaga/Adak, Adak/Great Sitkin/Kagalaska, Atka/Amlia, and Umnak/Unalaska. This situation can result in considerable confusion. Your ideas of listing the names of the islands after the map sheet titles; as well as listing major streams or bays would help a lot.

Corrections for 1984 catalog and Atlas:

Attu:

Kaufman Creek, 309-25-10900 is illustrated in the Atlas but is not listed in the catalog. The Peaceful River 309-15-10400 should have coho illustrated not chum.

Kiska Island:

Stream #308-12-10700 is illustrated in the Atlas as 308-12-10100.

Tanaga Island:

Five streams are missing from the Atlas and catalog. These would have been illustrated on Gareloi Island quad. I checked my 3/5/83 correspondence to you and it lists 18 nominations for Tanaga. The present catalog listings only include 13 streams. I have included a new set of nominations for the missing streams. Please note attached map.

Adak Island:

Your cartographer or possibly myself were a bit loose with the pen or outlining the length of a few streams. I have included a map with corrections outlined in red.

Atka Island:

Stream #305-32-12700 should also list chum and coho. On the northeast end of the island there is a small pink and chum stream 2.3 miles north of Cape Shaw. There should also be a pink stream listed on the south shore of Vasilief Bay, 1.4 miles southeast of 305-32-11900. The stream which was designated 305-32-170 in 1973, in the next bay south, should have been deleted. I am unsure as to which stream 305-32-11700 is in the Atlas. ck. this (see xerox)

Unalaska Island:

There are four minor streams which did not make it into the 1983 catalog. In Kalekta Bay there is a pink stream 1.3 miles east of 302-30-11400, it was #130 in the 1973 catalog. In the South Arm of Udamat Bay there is a small pink stream .6 miles northeast of 302-50-11470.

In Usof Bay there should be two additional pink streams. One at 2.2 miles northwest of Johnson Cove (302-70-10900), and one 1.5 miles south of Johnson Cove.

Please note in the western portion of Kuliak Bay stream #302-80-10150 does not empty directly into the bay. It connects with the outlet of the small lake to the west (see attached xerox).
