IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

Side channel of the main river flowing out of Tustumena glacier, near Tustumena L., supported close to 1000 spawning sockeye salmon. Channel located immediately south of main channel, near lake, glacially occluded and shallow
