Revision Year:	2011	[signature] Habitat Operations Manager	7/14/10 Date
Revision to:	Atlas ____ Catalog ____ Both X	[signature] AWC Project Biologist	3/9/10 Date
Revision Code:	~~[illegible]~~, c-7, b-6, C-9	[signature] Cartographer	10/21/10 Date

OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho salmon	~~8/21, 8/22, 8/25, 8/30, 9/9/2010~~			X	☑
	10/4-9				☐
	11/6-8				☐
					☐
					☐

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Coho salmon observed as part of radio tracking study, tag numbers 1209, 1329, 1457, 1277, 1168, 1165, 1361, 1394

revise stream mouth and add arc w/coho salmon present

Name of Observer (please print): Zachary Liller

Signature: [signature] Date: 3/9/10

Agency: ADFG - CF

Address: 333 Raspberry Road
Anchorage, AK 99518

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Anadromous Waters Catalog.

Signature of Area Biologist: Douglas B Molyneaux Date: 3/12/2010 Revision 05/08

Note: Locations were determined by plotting lat/long for each fish detected during aeiral survey flights. In the typical situation where a fish was detected on multiple occasions during the flight (i.e. different locations) the location corresponding to the maximum signal strenght was plotted. Location names were determined using a combination of ArcGIS, Garmin Map, and quarter-quads. The entire Kuskokwim drainage above Aniak was flown extensively in October with the exception of the upper Holitna, upper Aniak, and a few small mainstem tributaries. These portions of the drainage that were not covered in October were flown in November. In the situation that a fish was detected in both the October and November surveys (n=48) the most upstream location was selected as the best estimate of upstream destination. In the situation were a fish was located in the mainstem during one survey event and in a tributary in the other, the tributary location was used, unless signal strenght dictated otherwise. **This table only represents best estimates of final upstream location for the purpose of mapping and FINAL distribution summaries(i.e. Green cells). Yellow cells represent new fish located during the November flight.**
