IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

Inclusion of Juneau Creek (244-30-10010-2165) in AWC supported by historic data

additional Data on File 1951-2004. Most spawning occurs in first 1½ mile of stream. additional intermitten spawning may occure up to 2½ miles of stream where an impassible falls prevents farther passage of salmon

Sockeye - 1951-1952, 1984 Chinook - 1952, 2004
Pink - 1978, 1999, 2001, 2004 Ss, Ksr - On File Soldotna
