Chinook salmon	10-10-86		X	

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

2 juvenile chinook salmon were taken at bridge crossing approximately 100 yards upstream of confluence with Little Susitna River. Rearing habitat is limited due to fast moving water over large rock and boulders. Several Dolly Varden were taken 1/4 mile above bridge crossing. Water level was up 2 feet from previous day when minnow traps were set.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
