The only changes I made were on Seward A-7

10110 1. I relocated Spring Ck to more closely approximate its true location, and added S for the 4 sockeye I saw spawning in it in 1983.

10070 2. On Seward Lagoon I added the 2nd Ave drainage (outlet of First Lake) and noted CO since they have spawned there in years past when we've had enough rain to get coho up that creek. Also added P_s for the few pinks that spawn in the lagoon inlet and outlet.

10078 3. I added P_s for the short creek I noted between the two airport runways. This creek used to be part of the one shown immediately east until the airport folks closed off the culvert years ago.

2040 4. I added S_{sr} for the sockeye that utilize Fox Canyon rearing pond for spawning/rearing. They also use the slow channel downstream, which is the one traced on this stream.
