Species	Date(s) Observed	Spawning	Rearing	Migration
COHO SALMON	10/1/88		XXXX	
DOLLY VARDEN	10/1/88	XXXX	XXXX	

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

Electrofished 845 seconds in approximately 2600 Ft. of this tributary to 241-20-10550. Sampled in reach of stream upstream of a point located due south of the lake found in the NW¼ Sec 20, T. 10 S, R. 14 W. Approximately 80 adult Dolly Varden in spawning colors were observed. They ranged in size from 300 to 600 mm long. Approximately 50 juvenile Dolly Varden from 50 mm to 90 mm long were also captured. One juvenile coho (48 mm long) was captured. Upper reach of this section has a 12' to 15' high waterfall that blocks fish movement.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.

This stream provides sections of good spawning and rearing habitat. (See photos P-467-1 thru 14) and P-466-24a
