Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

Eight young-of-the-year coho electroshocked from stream just above road to canoe take-out point (see map). Probably spawned in stream — no Y-O-Y coho captured in Swanson River during electroshocking effort at canoe take-out point on same day.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.

Topography by photogrammetric methods from aerial photographs taken 1950. Field annotated 1951. Map not field checked.

Selected hydrographic data compiled from USC&GS Charts H3210 (1910) and 8553 (1952), (1:194,154 scale). This information is not intended for navigational purposes.

Universal Transverse Mercator projection; 1927 North American datum. 10,000-foot grid based on Alaska coordinate system, zone 4. 1000-meter Universal Transverse Mercator grid ticks, zone 5, shown in blue.

Gray land lines represent unsurveyed and unmarked locations predetermined by the Bureau of Land Management, Folio S 16, Seward Meridian.

Swamps, as portrayed, indicate only the wetter areas usually of low relief, as interpreted from aerial photographs.

Lake elevations are unchecked.
