Drafted Date

Species	Date(s) Observed	Spawning	Rearing	Migration
COHO SALMON	10/1/88		XXX	

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

From Helicopter survey it was determined that the 10-15acre lake located in the NW¼ Section 13, T.10 S., R.15 W.S.M., is connected by a well defined outlet stream to a previously documented anadromous fish waterbody. The lake appears to provide ideal coho salmon rearing habitat.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
