Regional Supervisor 11-14-89 Date

SOF 12/12/89

FI Drafted 12/4/89 Date

Species	Date(s) Observed	Spawning	Rearing	Migration
Pink Salmon	8/19/89	X		

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

At the head of Thunder Bay there is a small stream that enters from the east. We counted 31 pink salmon in the short section of the stream and the pond. Entrance is probably only at high tide.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.

Seldovia C-1

There is about a 500' waterfall about 1/4 to 1/2 mile upstream with a lake above. There were only 2 pink salmon in the stream.

On to Thunder Bay where we anchored for supper. Visited 4 sites, Small stream on E side had 31 Pinks that would spawn in the inlet stream or shallow areas of pond. The inlet into the stream ~~had~~ looked to be too shallow for fish passage and there were 3 dead (stranded) in the stream.

The tributary that enters Thunder Bay from the NE had 3 channels that looked too shallow however there were fish in them and the high tides also went up that far. It was a high gradient stream, but still there were 87 pinks overall.

There is a large waterfall with a small lake behind a gravel berm in the NW corner, but the lake has no outlet - No fish were
