OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
COHO					

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Ed, The Topo maps are confusing for this Creek. Although the mouths are seperated by about 200 yds where they come into the Little Sus - They may be the same Creek - (# 2100). I'll hold on to this one and walk or fly the Creek next summer. About 600 coho go up the 1st Creek - fewer the second.
