Nathan:

I do not believe that I have directly worked in Crab Creek tributary 103-60-10500-2005, but I have electrofished streams that enter it from the north, and have found coho juveniles in them. I do not recall finding evidence of steelhead use, but was not looking for it either. Therefore, it is my opinion that sufficient evidence exists to specify -2005 as COr.

Dust off your memories, guys--

I just got a call from Nathan, who is working with Ed Weiss on the catalog. He asked if I had any records of the nomination for a trib to Crab Creek: 103-60-10500-2005. (Crab Creek was originally catalogued by Don Cornelius in 1986). The -2005 trib is the uppermost catalogued portion, above a 'coho-rearing polygon' nominated by Jack in 1986 or '88. It's also upstream of a trib to the south (-0910) that flows into the coho polygon, and contains coho and steelhead. Nathan and Ed have no record of the species in the -2005 trib. Does anybody remember adding that? If so, approximately what year, and (miraculously) what species you saw? I'd bet on coho, wouldn't want to bet on steelhead...

Please reply to both Nathan and me; if nobody remembers, it'd be relatively easy to go trap it if KHC will let us on the road system. Thanks!

Moira:

Can you fax me a map of the trib in question? I did a bunch of shocking in that area when KHC went back in to clean up some sticks left from when Jack and Glenn were in there. Pushed the upper limits of a few tribs upstream.

-Jim

Moira; This is too vague in my memory right now to give a definate answer, but coho seems logical. I would suggest trapping it. Did you know that about half of my POWI files are still in Ketchikan? A lot of the historical information is in storage, mixed in with the Ketchikan files. There are very complete files for all of the inspections, FRN responses, and reports of all kinds for things like this and a wealth of other POW info. When do you want to come and sort it out so you can take it back to Craig with you for years of exciting bedtime reading?

Nathan,

I just got back from trib. 2005 of Crab Creek. I would agree with the length of stream that is presently cataloged. I electroshocked this trib. and found coho and steelhead juveniles. I do not think this stream is spawning as there was no evidence of adult fish. I would catalog 103-60-10500-2005 as CO and SH rearing. For your information, I also found several sea-run Dolly Varden as well as resident DV. If you need any more infomation feel free to contact me.

Mark
