OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
	6/30/93				

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Two barriers were located at the sites indicated on the map. The first was 5' and 15' vertical falls. The second was a 30' drop in a gorge. Shocking upstream failed to capture any coho. Due to the location of the falls in the gorge it is unlikely that this system will ever be laddered.
