IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Six coho salmon were observed spawning just below Holgate's land last fall. Tagging studies have shown that anadromous cutthroat trout spawn in this system (see FDS report 91-51). This spring, about 12 spawning pairs of CT were observed spawning between Rus Walton's property and Small tracts road. One pair was spawning just upstream of the road. During fry trapping investigations this year, All three species (juveniles) were caught up to (over)
