Name of Waterbody (if known): Shakan Bay #12

105-42-10160

Location:

Anadromous Waters Catalog Volume and Number S.E. Alaska

USGS 1:63,360 Quadrangle (6) Petersburg A-5 (6)

or 1:250,000 (if 1:63,360 not available) _____

Species	Date(s) Observed	Stage(s) (Spawning, Rearing, Migration)
Coho CO	6/27/85	rearing with spawning area available

Comments: Please provide any clarifying information. Also, please include a map of the area identifying the stream reach. This can be a copy of the map from the Anadromous Waters Atlas.

Rearing coho were trapped and observed in good numbers in the intertidal area, indicating rearing use. Spawning area is available in the upper intertidal area and for at least 160 meters upstream. A rearing Dolly Varden was the only fish captured beyond the intertidal area.
