There are some questions on the attached nominations that need to be answered before we process them.

1. We need some idea of what elevation the intertidal zone ends in order to draft the atlas correctly. These were from Craig Burns (Barrier Locations indicated)
2. I thought we were going to model probable fish habitat along with ground truthing before adding them to the atlas. (additional justifications given)
3. I need to know why pinks at the mouth of the stream indicates spawning occurring in the stream re. Your Gold Creek situation, (additional justification on forms)
4. On the Harding Cabin stream - the nomination says 150, the stream survey shows only 50 (corrected)
