Cutthroat (CT)	July 27 & 31, 1984		✓	

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

Cutthroat juveniles were caught in minnow traps in the mainstem and Tributary #2 of Switzer Cr. It is believed they would be found in all tributaries to Switzer Cr.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
