Attention: Mr. Karl Johnstone, Chairmen, and Members of ABF,

Sirs:

By my testimony, attached drawn to your attention on this 2013 Proposal 131 – 5 AAC 05.360

To effectively guide and protect species management in its rearing and wintering waters of the Bering Sea, and the North Pacific migration and returning migration routes, and,

Further ensure fishing gear [five (5) inches] from use to target species in its puerile juvenile state.

What will happen if measure is not done? Historically and by targeting the species suffer loss

On the species life of wintering and rearing within its waters Chinook return at Eight (8) years of age, and puerile juvenile are known to come inshore waters and return again to wintering grounds.

This end request, question, answer (s),

Thank You,
