Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

Upper limits of fish on main Log Jam Creek moved downstream - 40 to 50 foot falls blocks fish passage. Two tributaries added as indicated. Gorbusha Creek provides majority of spawning habitat in this system. Little Gorbusha Creek only supports coho salmon.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
