Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

The main channel of the Arnklin River is in the wrong location in two areas. Using USFS modified quads, field observation and aerial surveys I have placed the main stem in the correct channel.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
