Richard Reed — Regional Supervisor — 8/14/86 Date

F1 — Drafted — 10/23 Date

Species	Date(s) Observed	Spawning	Rearing	Migration
coho	8/8/86		X	

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

Rearing coho were occasionally observed in this small tributary. The substrate is not exceptional quality but may well be utilized by spawning coho. A survey during peak escapement is needed to determine spawning use. Only the upper portion of the tributary accessible to anadromous use was surveyed. The habitat nearer to the confluence to the mainstem may be higher quality.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
