Drafted Date

Species	Date(s) Observed	Spawning	Rearing	Migration
Coho	7/9/86	Suitable substrate present	X	

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

Rearing coho were commonly observed in this small stream. Beaver dam impoundments dominated the habitat of the stream near the sample site. A small stretch of substrate suitable for spawning use was noticed ~~and~~ The lower reach of the stream may contain some spawning gravel also. Coho usage most likely extends beyond the sample point.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
