Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

On 8-14-86 approx. 500 adult sockeye were seen in the first ½ mile of this stream water levels were high which hampered insibility. A fry trap was set near the confluence with MTN stream - catch = 109 CO, 1 RB (40 minute soak.)
A survey By seasonal B. Kirkpatrick confirmed rearing in the upper reaches 7/86

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
