OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
Chum Salmon	9/08/95	7,000			
Chum Salmon	9/03/93	1,500			
Chum Salmon	8/31/92	250			
Chum Salmon	8/29/90	3,200			

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Chum Salmon have been observed using this system during the past 25-35 years. Because the area is confusing during some of the earlier years, the fish were logged as being in other streams. It was only recently discovered that this stream is not listed in the anadromous stream catalogue.

Name of Observer (please print) Arnold R. Shaul
