Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc.

Two forks converge and flow north. One tributary (west one) comes out of lake. Habitat of surrounding area has been logged. Surrounding slopes are mostly closed canopy second growth of about 35 years old. Streamside habitat is too marshy for most of it to be forested.

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
