Rosgen Channel Type: E4 *Low gradient, meandering riffle/pool stream with low width/depth ratio and little deposition. Very efficient and stable. High meander width ratio.*

Station Comments: Channel becomes beaded and discontinuous within 1 km upstream. Stream may periodically go dry downstream. One large beaver dam blocks the stream a short distance above the King Salmon River confluence. The stream flows through a broad pass dividing the Kuskokwim and Nushagak river drainages. The pass provides a good opportunity for headwater capture, perhaps providing opportunities for exchanges of fish communities.
