

To; Whom it may concern,

name is

Set Net RC 022

I My Danny Wassily as a fisherman

I Belive that exetending the low water mark would really help out the Clark's Point set netters to catch more fish cause really when the fishing run come's it don't wait for anyone cause at a 12" to 13" low tide's we can even fish the water comes in only about one foot or less on a tide now are we Clark's Point set netter are to make it to live through the winter. As a set netter

I really agree to exetion on the low water tide to go out 700 feet more.

Sincerely

Danny Wassily
