REPORT REVIEWED BY: Mike Nowy Wildlife Biologist 5/19/80

SIGNATURE TITLE DATE

RECOMMENDATIONS: If stream enters Unit 6 it should be check for resident fish habitat — see attached pages

5/15/80
Unit 6
Kitkun Bay

Stream #20

Stream #20 is a stream 5-12 feet wide and ranging in depth from 4-10 inches with pools to 18 inches deep. The substrate is bedrock, large cobbles, and some spawning gravel. There is a probable barrier falls 20 ft high about 200 ft from mouth of creek. The gradient above the falls is 25 to 30% with large rocks and more 8-10 ft falls. No fish were shocked in the creek. It is possible some intertidal salmon spawning may occur as well in the first 200 ft. of the stream. The stream was flagged B/W for the first 200 ft. to the falls and was tagged at the mouth. The unit boundary is far above this point.
