Lake Survey Form

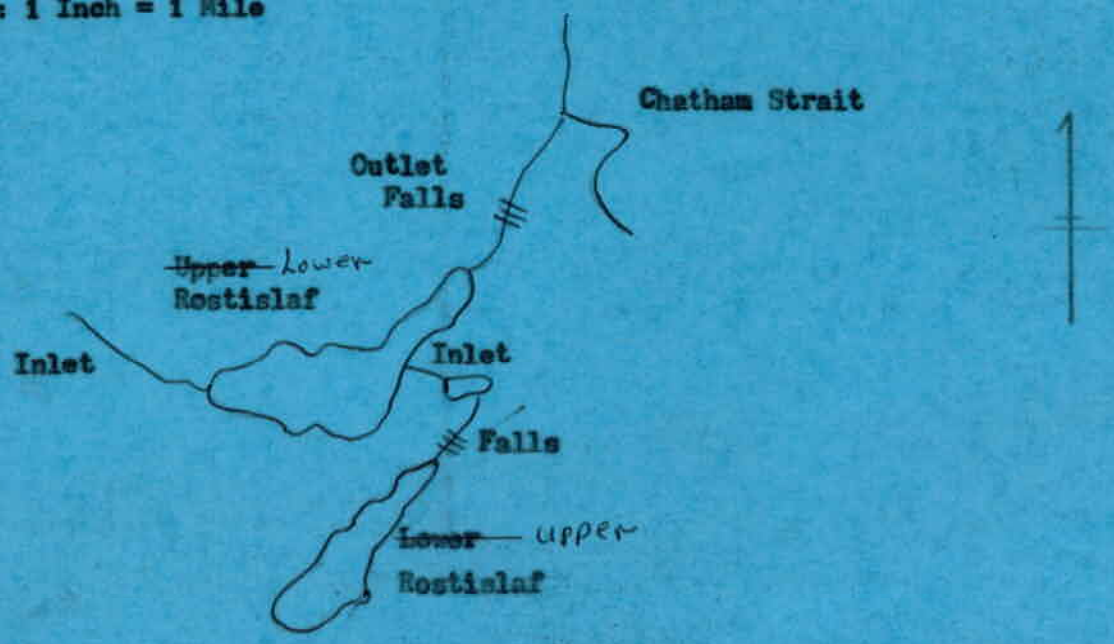
Lake Rostislaf Lake, Lower Sec. 19, Twp 62 S., Rge 69 E., Lat 56°29'30" N., Long 134°41'30" W.
Acreage 270 Max. Depth (?) Oligotrophic Altitude 610 Feet
Location Baranof Isl. - East shore Water Color (clear, silty) Clear
Type of Bottom Detritus - Extensive gravel shoal in upper end of lake
Inlets (name, size, permanency) Two permanent inlets flowing an est. 15 c.f.s. each
Benchmark (Description) None
Outlet (size, immediate and main drainage) One outlet to saltwater flowing an estimated 40 c.f.s.
Barriers Impassable falls on outlet to saltwater
Use (Private, public, semiprivate) Public - Tongass Natl. Forest
Public Access Site Excellent cabin site at head of lake
Facilities (Campground, roadhouse, etc.) None
Native Fish Species None
Introduced Species None
Spawning Grounds Upper inlet at lake head appears an excellent spawning stream. Both gravel composition and flow are ideal. Lower inlet less suitable.
Fishing History None

Other Uses None at present
Fish Losses None
Character and size of watershed Approximately 2500 acres (Planimeter)

Remarks An excellent prospect for trout introductions. Trout could be expected to maintain themselves by nat. reproduction. Upper Rostislaf (146 A.) drains to Lower lake, but is seperated by an impassable falls. It is a poor stocking prospect due to size
Note: Acreages and watershed area taken from Federal Power Commission Report (1947)

(over)

Description of accessibility (how reached) A fly-in lake located approx. 20 miles north of Port Alexander, on the East shore of Baranof Island. Approx. a 35 minute flight from Sitka. The lake could be reached from the beach, a distance of 0.9 mile, however adequate boat anchorage is lacking.

Sketch: showing outline of lake, depth, prominent landmarks, inlets, outlet, weedbeds, public service site location, benchmark location, etc.


SCALE: 1 Inch = 1 Mile
