September 2022

The Fishery Management Reports series was established in 1989 by the Division of Sport Fish for the publication of an overview of management activities and goals in a specific geographic area, and became a joint divisional series in 2004 with the Division of Commercial Fisheries. Fishery Management Reports are intended for fishery and other technical professionals, as well as lay persons. Fishery Management Reports are available through the Alaska State Library and on the Internet: <http://www.adfg.alaska.gov/sf/publications/>. This publication has undergone regional peer review.

Product names used in this publication are included for completeness and do not constitute product endorsement. The Alaska Department of Fish and Game does not endorse or recommend any specific company or their products.

ABSTRACT

This report summarizes 2021 harvest, effort, and management of commercial state-waters and parallel groundfish fisheries managed by the Alaska Department of Fish and Game (ADF&G) in the Kodiak, Chignik, and South Alaska Peninsula Areas. Reported harvest data were acquired from the ADF&G fish ticket database. Principal state-waters fisheries include Pacific cod *Gadus macrocephalus* and black rockfish *Sebastes melanops*. The 2021 harvest of Pacific cod during state-waters fisheries totaled 10.69 million pounds from 103 vessels, with an estimated exvessel value of \$4.27 million. Black rockfish harvest in the Kodiak Area jig gear fisheries totaled 87,634 pounds from 15 vessels with an estimated exvessel value of \$87,634. Black rockfish harvest in the Chignik Area is confidential and no effort occurred in South Alaska Peninsula Eastern District. During parallel fisheries, ADF&G adopts most season dates, bycatch limits, area closures, and allowable gear types established by the National Marine Fisheries Service (NMFS) for federal fisheries that occur in the adjacent exclusive economic zone. Walleye pollock *Gadus chalcogrammus* and Pacific cod are the predominant species harvested during parallel fisheries.

Keywords: Kodiak, Chignik, South Alaska Peninsula, groundfish, Pacific cod, black rockfish, walleye pollock, lingcod, state waters, parallel, commercial fisheries, exvessel, trawl, pot, longline, jig, Annual Management Report

INTRODUCTION

This report provides an overview of commercial groundfish fisheries in the Kodiak, Chignik, and South Alaska Peninsula Areas and summarizes commercial catch information and regulations that guide management of groundfish resources. These commercial fisheries include Pacific cod *Gadus macrocephalus*, black rockfish *Sebastes melanops*, dark rockfish *Sebastes ciliatus*, lingcod *Ophiodon elongates*, and walleye pollock *Gadus chalcogrammus*. Fishery harvest data reported was acquired from the Alaska Department of Fish & Game (ADF&G) fish ticket database. Appendix A defines frequently used acronyms and keywords associated with groundfish fisheries.

Commercial groundfish fisheries inside state waters (0–3 nmi) are managed by ADF&G under regulations developed by the Alaska Board of Fisheries (BOF). Management authority for commercial groundfish fisheries in the exclusive economic zone (EEZ; 3–200 nmi) off Alaska, with the exception of exclusively state managed species (e.g., black rockfish), is delegated to National Marine Fisheries Service (NMFS) through the Magnuson-Stevens Fishery Conservation and Management Act (MSFCMA 2007). Federal commercial groundfish fisheries are prosecuted under guidelines developed by the North Pacific Fishery Management Council (NPFMC).

Several commercially important groundfish species managed by NMFS also occur inside state waters. To facilitate consistency between state and federal regulations for specific transboundary groundfish species, ADF&G issues an annual Emergency Order (EO), effective January 1, establishing parallel groundfish seasons in state waters, during which the state adopts most regulations of adjacent federal fisheries unless superseded by BOF regulations (Table 1).

State-waters seasons are independent of federal/parallel seasons. In the Kodiak, Chignik, and South Alaska Peninsula Areas, state-waters seasons for Pacific cod, lingcod, black rockfish, and dark rockfish are established by regulation. State-waters seasons for Pacific cod are prosecuted exclusively within state waters of Alaska (0–3 nmi), whereas ADF&G has management authority from shore to the 200 nautical mile boundary of the EEZ in the Gulf of Alaska (GOA) for lingcod, black rockfish, and dark rockfish. In 2021, 14 EOs were issued to regulate state-waters groundfish fisheries in the Kodiak, Chignik, and South Alaska Peninsula Management Areas (Table 1).

During 2021, walleye pollock and Pacific cod were the primary species harvested from state waters in the Kodiak, Chignik, and South Alaska Peninsula Areas (Table 2). In state waters, all directed walleye pollock harvest occurred during parallel seasons, whereas Pacific cod were harvested during state-waters and parallel seasons.

PACIFIC COD

In the GOA, Pacific cod are managed as a single stock (Shimada and Kimura 1994) but are apportioned as Acceptable Biological Catches (ABCs) among the federal regulatory areas of Eastern Gulf of Alaska (EGOA), Central Gulf of Alaska (CGOA), and Western Gulf of Alaska (WGOA; Figure 1). The random effects model used for area apportionments for the 2019 GOA Pacific cod stock assessment resulted in a substantial shift in biomass from the WGOA to the CGOA (Barbeaux et al. 2019). Rather than adopt this apportionment, in 2019 the NPFMC GOA Groundfish Plan Team recommended using an average of the 2017 and 2019 apportionment values, and this method was also recommended for use in the 2020 assessment in anticipation of a 2021 survey (Barbeaux et al. 2020a). These recommended apportionment values were ultimately adopted by the NPFMC Science and Statistical Committee for use during 2021 fisheries, resulting in the area-apportioned ABCs of 57.8% to the CGOA (30.1 million pounds), 33.8% to the WGOA (17.6 million pounds), and 8.4% to the EGOA (4.4 million pounds; Barbeaux et al. 2020b).

Pacific cod ABCs are further apportioned between federal/parallel fisheries and state-waters fisheries. In the CGOA, federal/parallel fisheries receive 75% of the CGOA ABC as Total Allowable Catch (TAC) and state-waters fisheries receive 25% of the CGOA ABC as Guideline Harvest Level (GHL). In the WGOA, federal/parallel fisheries receive 70% of the WGOA ABC and state-waters fisheries receive 30% of the WGOA ABC. Federal/parallel TACs are further apportioned by season, gear type, and processing activity. During directed federal fisheries, NMFS allocated 60% of the TAC to the spring A season, and the remaining 40% of the TAC was made available during the fall B season. State-waters Pacific cod GHLs in the Kodiak, Chignik, and South Alaska Peninsula Areas are not apportioned into A and B seasons.

NMFS conducts an annual stock assessment to establish Pacific cod ABCs. The data as interpreted indicates that the stock remains at low levels, but is increasing with a better 2018 recruitment and reduction in fishing mortality (Barbeaux et al. 2020b). The 2021 spawning biomass is estimated to be 22.2% of an unfished biomass, above the overfished determination level (i.e., 17.5%) and above the 20% threshold designed to protect forage for endangered Stellar Sea Lions; federal regulation prohibits directed Pacific cod fisheries if biomass falls below 20% (Barbeaux et al. 2020b). As a result, federal/parallel and state-waters fisheries were prosecuted in 2021.

PARALLEL SEASON

Background

ADF&G annually issues an EO establishing parallel Pacific cod seasons in state waters of the Kodiak, Chignik, and South Alaska Peninsula Areas (EO# 4-GF-01-21; Table 1). This EO adopts most federal fishing regulations including season dates, allowable gear types, area closures, bycatch limits, or other regulations the commissioner determines reasonably necessary to accommodate federal fishery management measures in state waters. Most NMFS area closures, including closures for Steller sea lion (SSL) protection, are in effect during parallel fisheries.

Federal seabird avoidance requirements are recognized by the state during parallel Pacific cod fisheries as are vessel monitoring system (VMS) and catch reporting requirements. Federal sector allocations based on processing activity are not recognized in parallel Pacific cod fisheries. State waters adjacent to federal waters open to a gear type, for either catcher–processor or catcher–vessel, are considered open in the parallel fishery for that same gear type regardless of processing activity.

2021 Parallel Pacific Cod Season Overview

The 2021 CGOA Pacific cod harvest, including federal, parallel, and state-waters seasons, totaled 24.39 million pounds, which was 81% of the CGOA ABC (Table 3). Approximately 41% of the CGOA total harvest was taken from state waters. Total Pacific cod harvest from the WGOA during 2021 was 13.94 million pounds, which was 79% of the WGOA ABC (Table 4). Approximately 48% of the total WGOA harvest was taken from state waters.

Kodiak Area

The 2021 Kodiak Area parallel pot gear A season was open from January 1 through January 22 and parallel pot gear B season was open from September 1 through December 31.

During the January 2020 BOF meeting, the state-waters jig gear fishery start date was changed to open on January 1, concurrent with the federal CGOA opening date (Table 5). Therefore, vessels using jig gear within state waters of Alaska (0–3 nmi) participated in the state-waters fishery, and the parallel jig gear season would not open until the state-waters GHL was achieved. The state-waters jig fishery was open from January 1 through December 31; therefore, the parallel jig fishery did not open and no harvest occurred (Tables 6 and 12).

Harvest of Pacific cod by all gear types during the 2021 parallel fishery within the Kodiak Area totaled 1.96 million pounds (Table 6). Most Pacific cod were harvested using longline gear (60%) and pot gear (38%).

Chignik Area

The majority of the Chignik Area is located within the CGOA with a small portion located within the WGOA federal management area (Figure 1). The Chignik Area parallel season has separate dates according to location within federal management areas. For the Chignik Area located within the CGOA, the 2021 parallel pot gear A season was open from January 1 through January 22 and the parallel jig gear A season was open from January 1 through March 14. The parallel pot gear B season did not open because the state-waters rollover season did not close until December 31; the parallel jig gear B season did not open because the state-waters season did not close until December 31. For the Chignik Area located within the WGOA, the parallel pot gear A season was open from January 1 through February 3 and the parallel jig gear A season was open from January 1 through March 14. The parallel pot gear B season did not open because the state-waters rollover season did not close until December 31; the parallel jig gear B season did not open because the state-waters season did not close until December 31.

The 2021 Chignik Area parallel Pacific cod harvest of 10,591 pounds was harvested by vessels using longline (73%) and trawl gear (27%; Table 7). Chignik Area parallel harvest of Pacific cod was predominantly located in the CGOA, but some parallel harvest in the WGOA did occur.

South Alaska Peninsula Area

The 2021 South Alaska Peninsula Area parallel A season was open from January 1 through February 3 for pot gear and from January 1 through March 15 for jig gear. The WGOA parallel pot gear B season was open from September 1 through December 31; the parallel jig gear B season did not open because the state-waters season did not close until December 31. Harvest of Pacific cod by all gear types during the 2021 South Alaska Peninsula Area parallel season totaled 1.85 million pounds (Table 8). Pot gear vessels harvested the largest proportion (65%), followed by trawl gear vessels (29%).

STATE-WATERS SEASON

Background

State-waters Pacific cod seasons in the Kodiak, Chignik, and South Alaska Peninsula Areas began in 1997. The BOF developed state-waters Pacific cod management plans for each management area (Table 5). Allowable gear types (pot, mechanical jigging machine, and hand troll gear) are the same across management areas, whereas fishing season dates, vessel size limits, registration exclusivity, GHL allocations and rollover provisions, and gear storage regulations are unique to each management area.

The Chignik and South Alaska Peninsula Area management plans specify gear limits of 60 pots or 5 jig machines. Vessels operating pot gear in the Kodiak Area also specify a limit of 60 pots. In January 2020, the BOF increased the jig gear limit for the Kodiak Area (Table 5). The regulation came into effect on June 5, 2020, and vessels targeting groundfish with jig gear in the Kodiak Area may operate up to 6 jigging machines with a maximum of 30 hooks per line. Previously, vessels were allowed up to 5 machines. The Kodiak Area cap of no more than 500 hooks in aggregate on board the vessel remains unchanged.

GHLS for each state-waters management area are set as a percentage of the annual federal Pacific cod ABC. State-waters GHLS were initially set at 15% of the ABC established for the federal CGOA or WGOA management areas and were structured to increase incrementally to 20% and then 25% of federal ABCs if harvest in any year exceeded 90% of the established state-waters GHLS. By 2003, each management area achieved the maximum GHLS increment, and GHLS were set at 25% of the WGOA ABC for the South Alaska Peninsula Area and 25% of the CGOA ABC divided among the Kodiak Area (12.5%), Chignik Area (8.75%), and Cook Inlet Area (3.75%). In 2014, the BOF increased the South Alaska Peninsula Area GHLS to 30% of the WGOA ABC. GHLS for each state-waters management area are further apportioned between gear types. If a gear type GHLS allocation will not be attained by the date specified in regulation, a rollover provision may allow all gear types the opportunity to harvest some or all of the remaining GHLS.

2021 State-Waters Pacific Cod Season Overview

Approximately 10.69 million pounds of Pacific cod were harvested from Kodiak, Chignik, and South Alaska Peninsula Areas by 103 vessels during the 2021 state-waters seasons (Table 9). This was a 41% increase in participation and a 135% increase in harvest compared to the 2020 state-waters season. Compared to the previous 5-years (2016–2020), 2021 participation was 6% below average and harvest was 41% below average (Table 9). Total 2021 state-waters seasons exvessel value was approximately \$4.27 million. The 2021 price per pound of \$0.40 is lower than the last 2 years but consistent with the previous 5-year average of \$0.40 (Table 9).

Kodiak Area

The 2021 Kodiak Area GHL was 3.76 million pounds (Table 9). Pot and jig gear vessels were each allocated 50% of the total GHL, or 1.88 million pounds (Table 10). Total Pacific cod harvest from the 2021 Kodiak Area state-waters season was 3.65 million pounds taken by 55 vessels with an estimated exvessel value of \$1.46 million based on an average price of \$0.40 per pound (Table 9). Pacific cod were harvested from 27 statistical areas during the season (Table 11). Harvest was distributed around the Kodiak Archipelago; notable harvest occurred in Outer Kiluida Bay (statistical area 525703), Chiniak Bay (statistical area 525733), Uganik Bay (statistical area 535732), Izhut Bay (statistical area 525806), Outer Ugak Bay (statistical area 525701), and Marmot Bay (statistical area 525731; Table 11, Figure 2, and Appendix B1).

Kodiak Pot Gear Season

The Kodiak Area state-waters pot gear season opens 7 days after closure of the federal CGOA pot gear A season. The 2021 federal CGOA pot gear A season closed January 22; therefore, the Kodiak Area state-waters Pacific cod pot gear season opened January 29 (Table 12).

A total of 10 vessels participated in the 2021 Kodiak Area state-waters pot gear season; 4 vessels were over 58 feet overall length (OAL) and 6 vessels were 58 feet OAL or less. This was an increase in the total number of participating vessels from the previous year (43% increase) but overall, the second lowest number since the start of the fishery in 1997 (Table 10). The GHL allocation for pot gear vessels is 50% of the total state-waters GHL (1,881,626 pounds); however, pot gear vessels greater than 58 feet OAL are limited to 25% of the total state-waters GHL (940,813 pounds) before September 1. Fleetwide landings ranged from approximately 3,000 to 183,000 pounds per day and averaged 75,919 pounds per day on days when landings occurred. Individual vessel landings ranged from approximately 3,000 to 132,000 pounds with an average landing of 35,811 pounds. The pot gear season closed on February 18 for vessels greater than 58 feet OAL and on February 27 for vessels 58 feet OAL or less (Table 1). The pot gear season was open for 30 days (Table 12). The total harvest by vessels operating pot gear was 1,897,975 pounds and the estimated exvessel value of the 2021 pot gear fishery was \$740,000 based on an average exvessel price of \$0.39 per pound (Table 10).

Kodiak Jig Gear Season

The Kodiak Area state-waters Pacific cod season for vessels using jig gear opened at 12:01 AM January 1, 2021 (Table 12). There was a 50% increase in participation compared to the 2020 season. A total of 45 vessels participated in the 2021 Kodiak state-waters jig gear season, landing 1,752,630 pounds (93% of the jig GHL allocation; Table 10).

Peak harvest during the Kodiak jig gear season occurred March through June. During this time period, the number of landings per week ranged from 2 to 22. No landings occurred in August, September, October, or December. Fleetwide landings ranged from approximately 100 to 106,000 pounds per day and averaged 16,500 pounds per day on days when landings occurred. Individual vessel landings ranged from approximately 100 to 26,000 pounds with an average landing of 7,028 pounds. The season closed on the regulatory closure date of December 31 (Table 12). The estimated exvessel value of the 2021 jig gear fishery was \$736,000 based on an average price of \$0.42 per pound (Table 10).

Allocation Rollover

Provisions in the *Kodiak Area Pacific Cod Management Plan* (5 AAC 28.467) permit additional harvest opportunity if ADF&G determines the GHL will not be attained by the regulatory closure on December 31. The management plan allows unharvested state-waters GHL to be taken by either pot or jig gear after closure of the federal CGOA pot gear B season. The federal CGOA pot gear B season remained open until the regulatory closure of December 31; therefore, no allocation rollover occurred during the 2021 season.

Chignik Area

The 2021 Chignik Area GHL was 2.63 million pounds (Table 9). Vessels using pot gear were allocated 90% of the GHL (2.37 million pounds), and vessels using jig gear were allocated 10% (263,428 pounds; Table 13). Total Pacific cod harvest from the 2021 Chignik Area state-waters season was 2,344,095 pounds (99% of the GHL), taken by 5 vessels with an estimated exvessel value of \$844,000 based on an average price of \$0.36 per pound (Table 9). Harvest occurred in 4 statistical areas during the 2021 state-waters season. Although a large portion of statistical area level harvest data is confidential, 40% of the harvest occurred near Mitrofanina Island (statistical area 585531; Table 14 and Appendix B2).

Chignik Pot Gear Season

The Chignik Area state-waters pot gear season opens March 1 or 7 days after closure of the federal CGOA pot gear A season, whichever is later. The 2021 federal CGOA pot gear A season closed January 22; therefore, the Chignik Area state-waters Pacific cod pot gear season opened March 1 (Table 15).

A total of 4 vessels participated in the 2021 Chignik Area state-waters pot gear season, which was the same amount of participation as the previous year (Table 13). All effort and harvest occurred during March. Fleetwide landings ranged from approximately 29,000 to 216,000 pounds per day and averaged 107,000 pounds per day on days when landings occurred. Individual vessel landings ranged from approximately 24,000 to 186,000 pounds with an average landing of 80,831 pounds. Harvest at the time of the pot gear closure on April 9 was 2.34 million pounds (99% of the GHL allocation; Table 13). The pot gear season was open for 40 days (Table 15).

Chignik Jig Gear Season

The 2021 Chignik Area state-waters jig gear season opened by regulation on March 15 and closed on December 31 (Table 15). No vessels participated in the 2020 Chignik Area directed jig gear season; one vessel harvested Pacific cod as bycatch (Table 13).

Allocation Rollover

Provisions in the *Chignik Area Pacific Cod Management Plan* (5 AAC 28.537) permit additional harvest opportunity if ADF&G determines the GHL will not be attained by the regulatory closure date. The management plan allows unharvested GHL to be taken by either pot or jig gear starting August 15. In 2021, the rollover fishery was open from August 15 through December 31; however, no harvest occurred.

South Alaska Peninsula Area

The 2021 South Alaska Peninsula Area GHL was 5.28 million pounds (Table 9). Vessels using pot gear were allocated 85% of the total GHL (4.49 million pounds), and vessels using jig gear were allocated 15% of the GHL (792,267 pounds; Table 16). The 2021 total harvest of 4.69 million pounds (89% of the GHL) was taken by 44 vessels with an estimated exvessel value of \$1.92 million based on an average exvessel price of \$0.41 per pound (Table 9). Harvest occurred in 22 statistical areas with notable harvests near Nagai Island (statistical area 605502), Sanak Island (statistical area 625401), Big Koniuji Island (statistical area 595502), and Ikatana Peninsula (statistical areas 635434 and 635432; Table 17, Figure 3, and Appendix B3).

South Alaska Peninsula Pot Gear Season

Unless delayed by weather, the state-waters pot gear season opens March 7 or 7 days after the close of the federal WGOA pot gear season, whichever is later. The 2021 federal WGOA pot gear A season closed February 3. Therefore, the South Alaska Peninsula Area state-waters Pacific cod pot gear season was scheduled to open March 7; weather delayed the opening until March 9 (Table 18).

A total of 28 vessels participated in the 2021 South Alaska Peninsula Area state-waters pot gear season, which was an increase in participation from the previous 3 years (2018–2020; Table 16). Fleetwide landings ranged from approximately 128,000 to 1.11 million pounds per day and averaged 579,023 pounds per day on days when landings occurred. Individual vessel landings ranged from approximately 3,700 to 111,000 pounds, with an average landing of 45,541 pounds. Harvest at the time of the pot gear season closure on March 15 was 4.1 million pounds, approximately 90% of the pot gear GHL allocation (Table 16). The pot gear season was open for 6 days (Table 18). The estimated exvessel value of the pot gear fishery was \$1.66 million based on an average price of \$0.41 per pound (Table 16).

South Alaska Peninsula Jig Gear Season

The South Alaska Peninsula Area state-waters Pacific cod season for vessels using jig gear opens 48 hours after closure of the federal Western Gulf of Alaska (WGOA) jig gear sector A season or March 15 if the WGOA federal jig gear A season has not closed. Through March 8, 2021, approximately 75% of the federal/parallel WGOA jig gear A-season allocation remained unharvested. Based on effort and harvest rate, it appeared unlikely that the federal/parallel WGOA jig gear A season would close with sufficient time remaining to fully harvest the state-waters jig gear GHL allocation prior to the regulatory closure on December 31. Therefore, the South Alaska Peninsula Area parallel Pacific cod jig gear season was closed at 11:59 AM March 15, 2021, and the South Alaska Peninsula Area state-waters Pacific cod jig gear season was immediately opened at 12:00 noon March 15, 2021 (Table 18).

A total of 18 vessels participated in the 2021 South Alaska Peninsula state-waters jig gear season, which was a 20% increase in participation from the previous year. The 2021 season jig gear harvest was 637,494 pounds, 81% of the jig gear GHL allocation (Table 16). Fleetwide landings ranged from approximately 700 to 36,000 pounds per day and averaged 8,500 pounds per day on days when landings occurred. Individual vessel landings ranged from approximately 100 to 26,000 pounds, with an average landing of 5,141 pounds. The jig gear season closed on the regulatory closure date of December 31 (Table 18). The estimated exvessel value of the 2021 jig gear fishery was \$249,000 based on an average price of \$0.39 per pound (Table 16).

Allocation Rollover

Provisions in the *South Alaska Peninsula Area Pacific Cod Management Plan* (5 AAC 28.577) permit additional harvest opportunity if ADF&G determines the GHL will not be attained by the regulatory closure date of December 31. The management plan allows unharvested state-waters GHL to be taken by either pot or jig gear after closure of the federal WGOA pot gear B season. The federal WGOA pot gear B season remained open until the regulatory closure of December 31; therefore, no allocation rollover occurred during the 2021 season. The season remained open to jig gear until the regulatory closure date; however, no harvest occurred after October 30.

Pacific Cod Harvest Monitoring

During the 2021 Pacific cod seasons, daily harvest reports were obtained from vessel operators using pot gear. Harvest reports included daily number of pots pulled, pounds retained, and fishing location for each vessel. Processor and vessel catch reports were subsequently referenced against landing data derived from the Interagency Electronic Reporting System (eLandings) to track daily catch and forecast harvests.

Dockside sampling was conducted in the port of Kodiak throughout the state-waters season and in Sand Point during the South Alaska Peninsula Area pot gear season. Pacific cod harvested in the Chignik Area were opportunistically sampled if those fish were landed in Kodiak or Sand Point. Samplers also collected data on fish length, weight, sex, age, and reproductive status. Sampling goals include 500 otolith samples for each gear type (pot and jig) for the Kodiak Area, and 500 otolith samples for combined gear types per area for Chignik and the South Alaska Peninsula.

Usually, dockside samplers conducted confidential interviews with vessel operators to obtain information on catch location, catch per unit effort, and bycatch. Safety protocols due to the Covid-19 pandemic prohibited dockside sampling staff from conducting skipper interviews; during 2021, sampling staff in Kodiak and Sand Point conducted 0 skipper interviews and collected biological samples from 94 deliveries. Samplers collected 5,659 fish lengths, 1,980 individual fish weights, extracted 1,980 otolith pairs for age determination, and made 1,980 observations of sex and maturity.

In 2021, average length of sampled Pacific cod in the Kodiak Area (67 cm), Chignik Area (69 cm), and South Alaska Peninsula Area (74 cm) were greater than the 10-year averages (63 cm, 64 cm, and 65 cm, respectively; Figures 4–6). The age of Pacific cod sampled in 2021 from all areas ranged from 4 to 11 years, whereas the recent 10-year averages ranged between age 2 to 12 years (Figures 7–9). In the Kodiak and Chignik Areas, the average age of 6 years is consistent with the recent 10-year averages (Figures 7 and 8). In the South Alaska Peninsula Area, the 2021 average age of 7 years is greater than the 10-year average of 6 years; the 2021 South Alaska Peninsula age distribution differed from the 10-year average, with fewer fish age 6 or younger and more fish age 8 or older (Figure 9).

BLACK ROCKFISH

In 1998, ADF&G assumed management authority for black rockfish within the EEZ of the GOA. Beginning that year, ADF&G assigned GHGs to state groundfish management areas within the GOA to better distribute effort (Figure 10). Since 2008, the BOF has provided further structure

to black rockfish fishery regulations through registration requirements, trip limits, gear limits, and bycatch limits (Table 19).

The Kodiak Area is divided into 7 districts: Afognak, Northeast, Eastside, Southeast, Southwest, Westside, and Mainland. The Chignik Area is divided into 3 districts: Mitrofanina, Chignik Bay, and Sutwik Island. The South Alaska Peninsula Area is divided into the Eastern and Western Districts; the Western District is located west of Scotch Cap light and is managed by ADF&G staff in Dutch Harbor (Figure 10). ADF&G staff in Kodiak annually establish district GHGs for the South Alaska Peninsula Eastern District and 5 districts of the Kodiak Area. Two districts in the Kodiak Area, Southwest and Mainland Districts, only allow harvest of black rockfish as bycatch in other fisheries. For the Chignik Area, there are no district GHGs but rather an area GHG with district harvest caps (Table 20).

Mechanical jigging machine and hand troll gear are the only legal gear types in the directed black rockfish fishery. All black rockfish harvested by jig gear, either through directed effort or as bycatch to other jig gear fisheries (i.e., Pacific cod or dusky rockfish *Sebastes variabilis*), accrue against area or district GHGs. Black rockfish bycatch harvest from non-jig gear fisheries (i.e., trawl, longline, etc.) does not accrue against area or district GHGs. Districts are individually managed and closed to directed fishing upon achieving the district GHG or district harvest cap. Additionally, individual area or district bycatch limits may be reduced inseason to prevent exceeding GHGs.

2021 Black Rockfish Overview

The black rockfish fishery in the Kodiak Area, Chignik Area, and South Alaska Peninsula Eastern District opened January 1, 2021. The directed fishery was closed in 2 districts in the Kodiak Area before the regulatory closure date when GHGs were attained; GHGs were not fully harvested in 3 districts in the Kodiak Area, Chignik Area, or South Alaska Peninsula Eastern District (Table 20).

Kodiak Area

Fifteen vessels harvested a total of 87,634 pounds of the 120,000-pound GHG during the 2021 Kodiak Area black rockfish fishery (Table 21, Figure 11). Seven vessels harvested 72,557 pounds (60% of the GHG, 92% of total harvest) during the directed fishery with the remainder taken as bycatch to other jig gear fisheries (Table 20). Directed harvest in the Afognak, Northeast, Eastside, and Southeast Districts occurred from February through October, although concentrated effort was intermittent, occurring in February, March, July, September, and October. The estimated exvessel value of the 2021 black rockfish fishery was approximately \$88,000 based on an average price of \$1.00 per pound (Table 21).

Chignik Area

The 2021 Chignik Area black rockfish GHG was 100,000 pounds. One vessel participated; harvest is confidential (Table 22).

South Alaska Peninsula Area

The 2021 South Alaska Peninsula Area black rockfish GHG was 75,000 pounds. No vessels participated in 2021 (Table 23).

Black Rockfish Harvest Monitoring

Black rockfish harvest is monitored through fish ticket records, district vessel registrations, mandatory directed fishery logbooks, and dockside sampling. Information collected by dockside samplers includes fish length, weight, sex, age, and reproductive status. The 2021 black rockfish dockside data collection was primarily focused on the Kodiak Area due to limited availability of dockside staff in the Chignik and South Alaska Peninsula Areas.

During 2021, dockside sampling staff in Kodiak collected biological samples from 19 deliveries from the Kodiak Area and 1 delivery from the Chignik Area. Samplers collected 2,067 fish lengths and 980 individual fish weights, extracted 980 otolith pairs for age determination, and made 980 observations of sex and maturity.

Black rockfish sampled from the Kodiak Area during 2021 averaged 43 cm in length, smaller than the recent 10-year average of 46 cm; fish length frequencies peak at 41 cm, with a smaller peak at 49 cm (Figure 12). A large cohort of small black rockfish have been observed since 2015, signaling the influx of a strong year class into the fishery. Sampled ages ranged from 5 to 45 years, with several predominant age classes (7, 8, and 9) in the catch making up 79% of the samples (Figure 13). Average age of sampled black rockfish in the Kodiak Area was 10 years, younger than the 10-year average of 17 years (Figure 13).

LINGCOD

Commercial regulations in the Kodiak and Chignik Areas prohibit retention of lingcod prior to July 1 and require retained lingcod to be a minimum of 35 inches in total length. These regulations buffer against commercial exploitation during nest-guarding and ensure only mature fish are harvested. The South Alaska Peninsula Area is believed to be near the western limit of lingcod distribution (Mecklenburg et al. 2002) and harvests are uncommon; therefore, seasonal retention and size limit regulations are unnecessary.

Since 1988, harvests of lingcod in the Kodiak, Chignik, and South Alaska Peninsula Areas have generally remained below 100,000 pounds annually. Although jig and hand troll gear may be used to target lingcod, most harvest occurs as bycatch in other commercial groundfish fisheries. The 2021 lingcod harvest in the Kodiak, Chignik, and South Alaska Peninsula Areas was 40,775 pounds (Table 24).

PARALLEL WALLEYE POLLOCK FISHERIES

State waters are opened for parallel walleye pollock seasons concurrent with adjacent federal seasons. Prior to the 2021 season, annual harvest limits were allocated across 4 seasons (A, B, C, and D seasons). Beginning in 2021, the CGOA and WGOA trawl catcher–vessel pollock fishery A and B seasons were combined into a single season and redesignated as the A season, and the C and D seasons were combined into a single season and redesignated as the B season (50 CFR § 679). Additionally, the opening date of the redesignated pollock B season was changed from August 25 to September 1. In some years and areas, directed fishing for pollock was prohibited to prevent exceeding the TAC, or more than one opening occurred within a season to ensure the full seasonal allocation was harvested (Table 25). Walleye pollock were primarily harvested by vessels using trawl gear.

The 2021 retained walleye pollock harvest totaled 164.7 million pounds in the CGOA and 38.9 million pounds in the WGOA (Tables 26 and 27). Approximately 5% (8.5 million pounds) of the

total 2021 CGOA walleye pollock harvest and 18% (6.8 million pounds) of the total 2021 WGOA harvest occurred in state waters.

TABLES AND FIGURES

Table 1.—Kodiak, Chignik, and South Alaska Peninsula Areas groundfish emergency orders summary, 2021.

Emergency order	Effective date	Explanation
4-GF-01-21	January 1, 2021	Established parallel commercial groundfish fishing seasons and bycatch limits in the Kodiak, Chignik, South Alaska Peninsula, and Bering Sea-Aleutian Islands Areas
4-GF-03-21	January 29, 2021	Opened Kodiak Area state-waters Pacific cod season to pot gear
4-GF-04-21	March 1, 2021	Opened Chignik Area state-waters Pacific cod season to pot gear
4-GF-06-21	March 7, 2021	Opened South Alaska Peninsula Area state-waters Pacific cod season to pot gear
4-GF-07-21	February 18, 2021	Closed Kodiak Area state-waters Pacific cod season to vessels greater than 58 feet to pot gear
4-GF-08-21	February 27, 2021	Closed Kodiak Area state-waters Pacific cod season to pot gear
4-GF-09-21	March 15, 2021	Opened South Alaska Peninsula Area state-waters Pacific cod season to jig gear
4-GF-10-21	March 9, 2021	Reestablished the opening of the South Alaska Peninsula Area state-waters Pacific cod season to pot gear due to weather delays.
4-GF-11-21	March 15, 2021	Closed South Alaska Peninsula Area state-waters Pacific cod season to pot gear
4-GF-13-21	April 9, 2021	Closed Chignik Area state-waters Pacific cod season to pot gear
4-GF-15-21	July 2, 2021	Closed directed black rockfish fishery and reduced black rockfish bycatch allowance from 20% to 5% for vessels using jig gear in the Northeast District of the Kodiak Area
4-GF-16-21	August 15, 2021	Removed gear limits and allowed either pot or jig gear to be used to harvest the remaining GHL for the remainder of the Chignik Area state-waters Pacific cod season
4-GF-17-21	August 15, 2021	Increased trip limit from 5,000 pounds to 7,000 pounds for vessels targeting black rockfish in the Afognak, Southeast, and Westside Districts of the Kodiak Area
4-GF-18-21	September 27, 2021	Closed directed black rockfish fishery and reduced black rockfish bycatch allowance from 20% to 5% for vessels using jig gear in the Eastside District of the Kodiak Area

Notes: Omitted emergency orders (e.g., 4-GF-02-21) enacted for management areas outside of Kodiak, Chignik, and South Alaska Peninsula.

Table 2.—Top 30 species harvested, by weight in pounds, as reported on groundfish fish tickets, from state waters of Kodiak, Chignik, and South Alaska Peninsula (SAP) groundfish management areas, 2021.

Species	Kodiak	Chignik	SAP	Total
Walleye pollock	7,970,327	601,875	6,704,353	15,276,555
Pacific cod	5,610,886	2,354,767	6,539,248	14,504,901
Pacific halibut	1,686,224	173,438	890,231	2,749,893

Table 5.–Kodiak, Chignik, and South Alaska Peninsula (SAP) Areas regulatory development for state-waters and parallel Pacific cod fisheries, 1996–2021.

Year	Regulation
1996	<ul style="list-style-type: none"> – Alaska Board of Fisheries developed state-waters Pacific cod management plans for Kodiak, Chignik, and SAP Areas. – Kodiak, Chignik, and SAP Areas established as exclusive registration areas for state-waters fisheries; suspension of exclusivity allowed after October 30. – Kodiak, Chignik, and SAP Areas allowable gear for state-waters established; mechanical jigging machines (five machines), hand troll, and pots (60 pots); suspension of gear limits allowed after October 30. – Season opening dates established for state-waters fisheries; Kodiak and SAP Areas open 14 days after federal season closure; Chignik Area opens April 15. – Vessel size limits established for Chignik and SAP state-waters fisheries (≤ 58 ft); suspension of vessel size limit allowed after October 30. – Kodiak Area state-waters GHG allocated by gear type (50% pot, 50% jig); allocation rollover allowed after August 31.
1997	<ul style="list-style-type: none"> – Kodiak, Chignik, and SAP Areas first state-waters fisheries prosecuted.
1998	<ul style="list-style-type: none"> – Season opening dates changed for state-waters fisheries; Kodiak and SAP Areas open seven days after federal season closure; Chignik Area opens April 1. – SAP Area state-waters GHG allocated by gear type (85% pot, 15% jig); allocation rollover allowed after August 31.
1999	<ul style="list-style-type: none"> – Chignik Area state-waters season opening date changed to April 15. – Chignik Area state-waters GHG allocated by gear type (85% pot, 15% jig); allocation rollover allowed after August 14. – Chignik Area changed to superexclusive registration area for state-waters fishery. – Kodiak Area pot gear vessels > 58 ft harvest capped at 25% of state-waters GHG prior to September 1.
2001	<ul style="list-style-type: none"> – State regulation adopted recognizing Steller sea lion haulouts during parallel fisheries. – Chignik Area state-waters season opening date changed to seven days after federal CGOA closure.
2002	<ul style="list-style-type: none"> – Vessel monitoring system (VMS) rules implemented during parallel fisheries. – Pot storage requirements liberalized in Kodiak and Chignik Areas for transition period between parallel and state-waters fisheries. – Chignik Area state-waters season opening date changed to March 1.
2004	<ul style="list-style-type: none"> – Pot storage requirements liberalized in SAP Area for transition period between parallel and state-waters fisheries.
2005	<ul style="list-style-type: none"> – Chignik Area state-waters GHG allocation changed (90% pot, 10% jig).
2007	<ul style="list-style-type: none"> – SAP Area 24-hour weather delay prior to state-waters season opening adopted. – SAP Area mandatory inseason catch reporting by vessels during state-waters fishery adopted. – SAP Area registration requirements changed, prohibiting fishing in another groundfish fishery outside of SAP Area and a portion of Chignik Area.
2010	<ul style="list-style-type: none"> – SAP Area vessel size limit (≤ 58 ft) for parallel fishery adopted.

-continued-

Table 5.–Page 2 of 2.

Year	Regulation
2011	– Chignik Area vessel size limit (≤ 58 ft) for parallel fishery adopted.
2012	– Kodiak Area state-waters season opening dates changed: pot gear opens seven days after federal CGOA pot gear A-season closure; jig gear opens 48 hours after federal CGOA jig gear A-season closure. – Chignik Area state-waters season opening dates changed: pot gear opens seven days after federal CGOA pot gear A-season closure or March 7, whichever is later. – SAP Area state-waters season opening dates changed: pot gear opens seven days after federal WGOA pot gear A-season closure or March 7, whichever is later, unless delayed by weather. – Kodiak, Chignik and SAP Areas state-waters season closure dates changed: jig gear closes June 8 or later, based on inseason assessment, to allow parallel jig gear season.
2014	– SAP Area state-waters GHl increased to 30% of WGOA ABC. – Chignik Area state-waters season opening dates changed: pot gear opens seven days after federal CGOA pot gear A-season closure or March 1, whichever is later. – Chignik and SAP Areas pot gear storage regulations changed: vessels may store open and unbaited pots at any depth beginning seven days prior to state-waters season opening.
2015	– Chignik Area gear limits removal date changed from after October 30 to after August 14.
2016	– Chignik Area reduced waters closed for Steller sea lion haulouts during parallel fishery for vessels that do not possess a FFP.
2017	– Kodiak Area nonexclusive registration area designation date changed from October 30 to June 10 for jig gear vessels.
2018	– Chignik Area state-waters rollover season closure date changed from September 1 to October 30, or when the GHl is attained, whichever occurs first. – SAP Area state-waters season opening weather delay provision removed for vessels using jig gear.
2020	– Kodiak Area state-waters jig gear season opening dates changed to January 1. – Kodiak Area state-waters rollover season addition: if it is determined that the jig gear GHl allocation will not be taken by June 10, 50% of the remaining jig gear allocation, as of March 25, may be taken by either pot or jig gear beginning April 1. – Kodiak Area gear limit increased from 5 to 6 mechanical jigging machines.

Notes: SAP = South Alaska Peninsula. GHl = Guideline Harvest Level. CGOA = Central Gulf of Alaska. WGOA = Western Gulf of Alaska. ABC = Acceptable Biological Catch. FFP = Federal Fisheries Permit.

Notes: Weights reported in whole fish pounds. Discards at sea excluded. ND = No Data. CF = Confidential; data are confidential when fewer than 3 vessels participated.

^a Harvest may include landings made after allocation rollovers.

^b Price per pound calculated from whole fish pounds sold, excluding bait and meal.

^c Total GHL; no GHL allocation by gear type during 1997–1999 seasons.

Table 14.—Pacific cod effort and harvest in pounds by statistical area, from the Chignik Area state-waters season, 2021.

Statistical area	Vessels	Landings ^a	Harvest ^b
585531	3	14	945,674
Other ^c	3	15	1,398,421
Total	4	29	2,344,095

Notes: Weights reported in whole fish pounds. Discards at sea excluded.

Chignik Area state-waters statistical areas for groundfish can be found in Appendix B2.

^a Landings may involve multiple statistical areas.

^b Harvest is from pot gear only.

^c A total of 3 statistical areas combined due to confidentiality.

Table 19.–Kodiak, Chignik, and South Alaska Peninsula Areas black rockfish regulatory development and management actions, 1997–2021.

Year	Regulation
Pre-1997	– Black rockfish managed by NMFS
1997	– NPFMC removed black rockfish from Pelagic Shelf Rockfish Group – State-waters managed separately from federal waters: Kodiak Area GHL established at 170,000 pounds; Chignik Area and SAP Area Eastern District GHLS established at 100,000 pounds
1998	– State assumed management authority from NMFS for black rockfish in the Exclusive Economic Zone – Kodiak and Chignik Areas and SAP Eastern District established as non-exclusive registration areas – Kodiak Area divided into seven districts each with separate GHLS
1999	– Kodiak Area Northeast District GHL reduced from 25,000 pounds to 20,000 pounds
2003	– Kodiak Area: regulation stating that vessels may not be concurrently registered for black rockfish and Pacific cod established – Kodiak Area trip limit established at 5,000 pounds per five days – Chignik Area designated superexclusive registration area – Chignik Area divided into 3 management districts
2004	– Kodiak Area Westside District GHL reduced from 30,000 pounds to 20,000 pounds
2005	– SAP Area Eastern District divided into 3 management sections – Kodiak Area incidental trip limit of 2,500 pounds established for vessels fishing during other directed jig groundfish fisheries in Kodiak Area – Kodiak Area logbooks mandated
2006	– SAP Area Eastern District GHL reduced from 100,000 pounds to 75,000 pounds
2007	– Kodiak Area Northeast, Afognak, and Southeast Districts incidental trip limit reduced from 2,500 pounds to 1,000 pounds
2011	– Kodiak Area Rockfish Management Plan revised: incidental trip limits repealed and replaced with bycatch percentages established by EO; trip limit increased from 5,000 to 7,000 pounds after August 14 by EO; reporting requirements and trip limits for catcher processors established
2012	– Kodiak Area Southwest and Mainland District GHLS eliminated; harvest as bycatch only
2014	– Kodiak Area Westside District GHL reduced from 20,000 pounds to 10,000 pounds
2015	– Kodiak Area Afognak District GHL reduced from 35,000 pounds to 30,000 pounds
2020	– Kodiak Area gear limit increased from 5 to 6 mechanical jig machines
2021	– Kodiak Area Northeast District GHL reduced from 20,000 pounds to 10,000 pounds – Kodiak Area Southeast District GHL increased from 30,000 pounds to 40,000 pounds

Notes: NMFS = National Marine Fisheries Service. NPFMC = North Pacific Fishery Management Council. GHL = Guideline Harvest Level. SAP = South Alaska Peninsula. EO = Emergency Order.

APPENDIX A. FREQUENTLY USED ACRONYMS AND KEYWORDS

Appendix A1.–Frequently used acronyms and keywords.

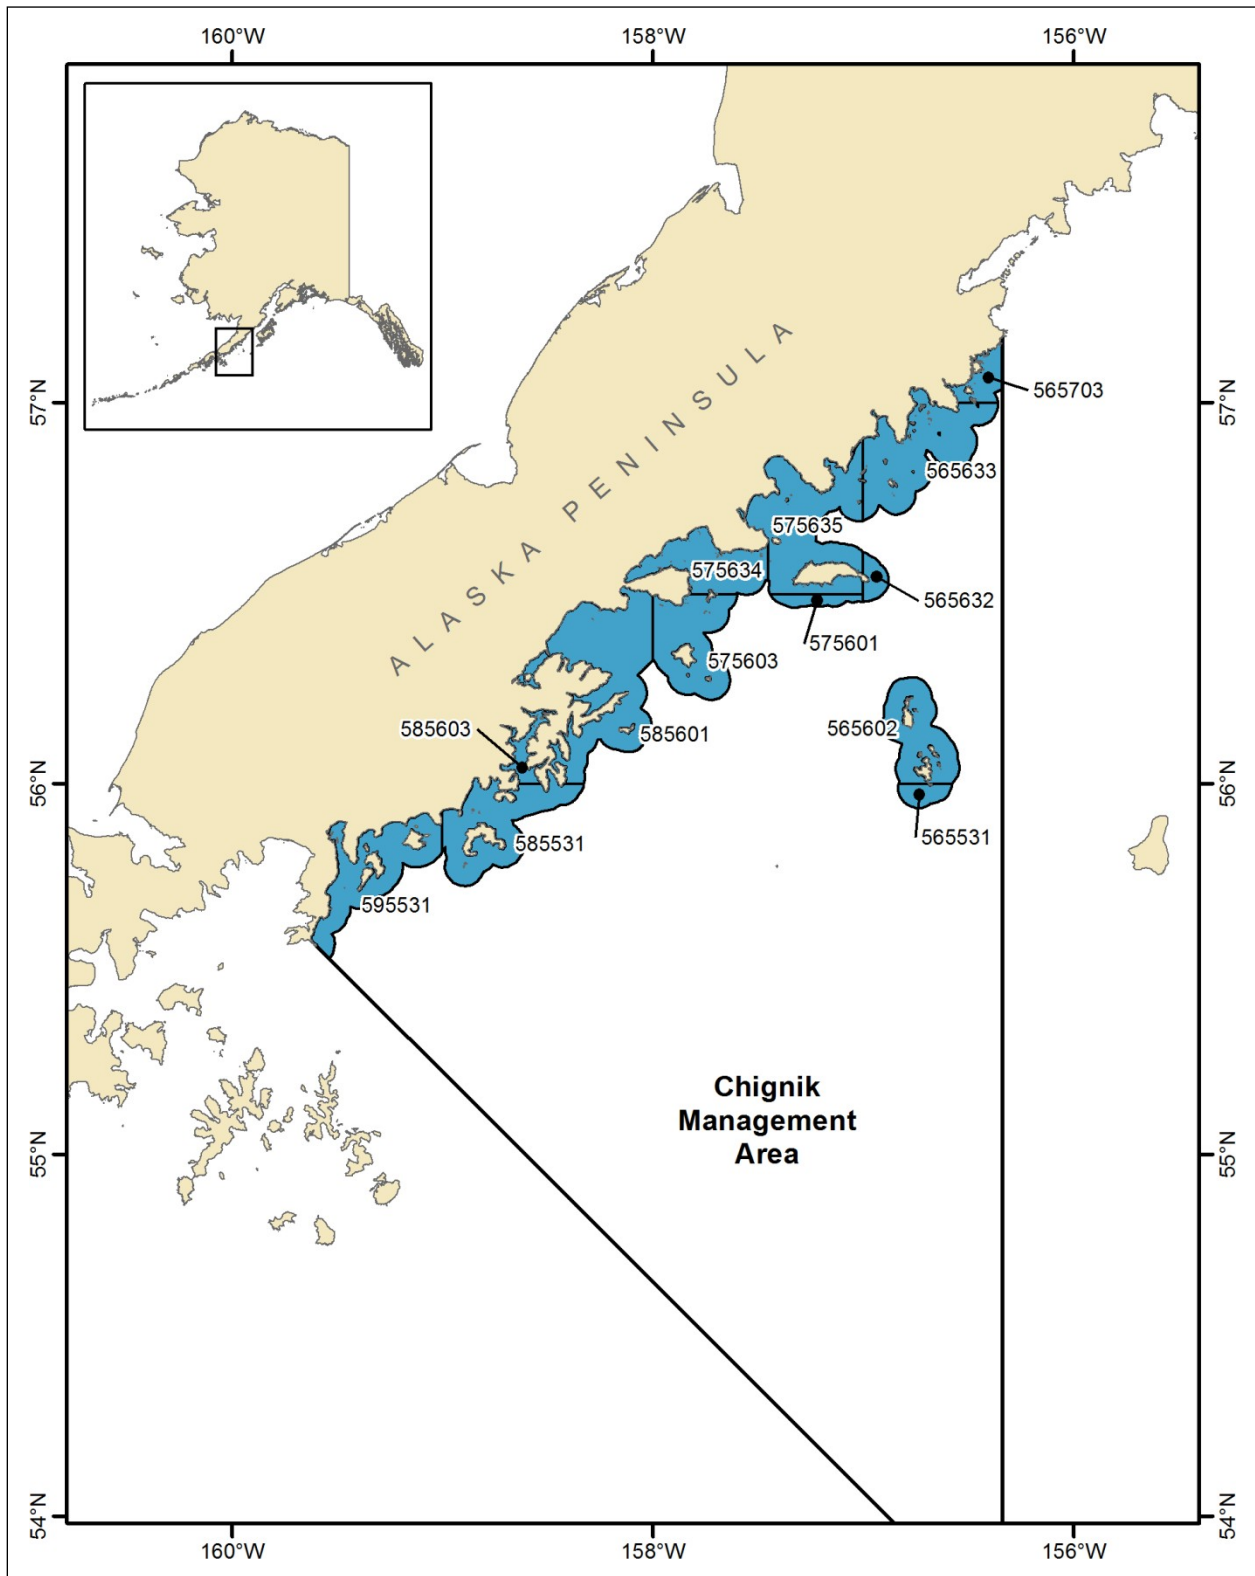

Acronym	Definition
ABC	Acceptable Biological Catch, stock specification as set by NPFMC on an annual basis
ADF&G	Alaska Department of Fish and Game
BOF	Alaska Board of Fisheries
BSAI	Bering Sea-Aleutian Islands Area, state management area or federal management area
CGOA	Central Gulf of Alaska, federal management areas 620 and 630
EEZ	Exclusive Economic Zone, federal waters from 3 to 200 nautical miles offshore
EGOA	Eastern Gulf of Alaska, federal management areas 640 and 650
EO	Emergency Order, management action taken by ADF&G to affect regulatory change
FFP	Federal Fisheries Permit
GHL	Guideline Harvest Level
GOA	Gulf of Alaska
LLP	Federal License Limitation Program
mt	Metric ton (1 mt = 2,204.6 lb)
NMFS	National Marine Fisheries Service
NPFMC	North Pacific Fishery Management Council
OAL	Overall length
Parallel fishery	Fishery occurring from 0 to 3 nautical miles opened by the state under federal rules while a federal fishery is ongoing from 3 to 200 nautical miles
SAP	South Alaska Peninsula
SSL	Steller sea lion
State waters	Territorial sea from 0 to 3 nautical miles offshore
State-waters fishery	Fishery occurring from 0 to 3 nautical miles open under Alaska Board of Fisheries regulations and managed exclusively by Alaska Department of Fish and Game
TAC	Total Allowable Catch, final federal harvest specification for directed fishing as recommended by NPFMC and set by NMFS
WGOA	Western Gulf of Alaska, federal management area 610
