**TABLE OF CONTENTS** ..... 2

**Introduction** ..... 4

**Committee Actions with Consensus** ..... 4

*Commercial Fishery* ..... 5

        1. Manage large sockeye runs so that escapements fall in the upper portion of the escapement goal range (Table 1), which would reduce incidental catch of king salmon ..... 5

        2. Use a Nushagak District Test Fishery to assess relative abundance of sockeye and king salmon ..... 6

        3. Modify/Clarify the Wood River trigger and establish a Nushagak River trigger ..... 6

        4. Provide a directed commercial fishery for King Salmon when surplus clearly exists ..... 7

*Sport Fishery* ..... 7

        5. Modify/reduce the annual limit for king salmon ..... 7

        6. Avoid complete closures of the sport fishery when possible. .... 7

*Subsistence Fishery* ..... 8

        7. Provide the department with flexibility to restrict but not close the subsistence fishery in low inriver run scenarios and standardize subsistence fishing schedule and area under a restricted scenario. .... 8

**Committee Actions with No Consensus** ..... 8

*Commercial Fishery* ..... 8

        1. Restrict mesh size in regulation to better conserve king salmon and exploit sockeye salmon ..... 8

        2. Better adhere to existing regulations and/or Modify the Nushagak District Allocation Plan to make clearer a priority for escapement of sockeye and king salmon ..... 8

        3. Mitigate Bay-wide Fleet Dynamics that Exacerbate early season harvest rates in the Nushagak District by modifying the Transfer Period ..... 9

        4. Reduce and Mitigate Continuous Commercial Fishing in the Nushagak District where possible ..... 9

*General* ..... 9

        5. Keep all Non-Subsistence Fisheries closed until the king salmon escapement goals have been met ..... 9

**ADF&G Action Plan for Addressing Stock of Concern** ..... 10

*Commercial Fishery* ..... 10

        Action #1: Status Quo ..... 10

        Action #2: Develop new regulations that would allow early season opening of the Wood River Special Harvest Area (WRSHA) ..... 11

        Action #3: Create an Optimum Escapement Goal for Nushagak River sockeye salmon ..... 11

        Action #4: Reduce net mesh size and/or net length ..... 12

        Action #5: Reduce fishing time and area. Reduce king salmon commercial harvest potential ..... 13

        Action #6: Close commercial fishing ..... 14

*Sport Fishery* ..... 14

        Action #1: Status Quo ..... 14

        Action #2: Reduce bag limit ..... 15

        Action #3: Adopt a regulation that would create a Nushagak River drainage king salmon nonretention (catch-and-release) fishery and prohibit the use of bait ..... 16

        Action #4: Adopt a regulation that would restrict time and area for king salmon sport fishing in the Nushagak River Drainage ..... 16

Action #5: Adopt a regulation that would close the king salmon sport fishery in the Nushagak River drainage and prohibit the use of bait in the drainage..... 17

*Subsistence Fishery* ..... 18

Action #1: Status Quo..... 18

Action #2: A harvest limit on Nushagak River king salmon in the subsistence fishery..... 18

Action #3: Reduce fishing time by one day increments in the subsistence fishery during king salmon season only..... 19

Action #4: Reduce area open in the subsistence fishery..... 19
