## Emergency Order

Alaska Department  
of Fish and Game

Under the Authority of AS 16.05.060

**Emergency Order No. 03-10-11**

**Issued at:** Fairbanks, Alaska  
September 29, 2011

**Effective Date:** 12:01 AM  
September 30, 2011

**Expiration Date:** June 30, 2011  
unless superseded by subsequent  
emergency order

### EXPLANATION:

This emergency order announces the re-opening of the resident hunter moose season in parts of Unit 24. The affected hunt area is listed in the hunting regulation book No. 52 as the remainder portion of Unit 24B (which requires a Harvest Ticket) and the remainder portion of Unit 24C (which requires a registration permit RM834). Harvest tickets and hunt permits for regulatory year 2011–2012 are still valid for the extended season. Existing hunt conditions for the September seasons will continue to apply, including all hunt conditions in the remainder of Unit 24C listed on the RM834 permit. The bag limit is 1 bull moose per regulatory year. Any hunter who has killed a moose anywhere in Alaska since July 1, 2011, under either state or federal regulations, is not eligible to hunt.

### REGULATION:

Therefore, the following regulations in **5AAC 85.045(a)(22), HUNTING SEASONS AND BAG LIMITS FOR MOOSE**, are superseded by this emergency order, and the following provisions are effective for hunting moose:

**Resident  
Open Season  
(Subsistence and  
General Hunts)**

**Nonresident  
Open Season**

Sept. 5–Sept. 25

Cora Campbell  
Commissioner

By delegation to:

Glenn Stout  
Wildlife Biologist

**JUSTIFICATION:**

The moose hunting season extension is being offered because a nearly month-long search and rescue effort diverted the entire communities of Allakaket, Alatna and Hughes from their normal fall hunting activities. This extended season will remain an any bull season, and existing hunt conditions for the September seasons will apply. Traditionally, harvest rates have been conservative (2.5–3.5% of the population) in this remote area, and harvest during this extended season is expected to remain low. Although this is an extremely low-density moose population, bull:cow ratios are high (55–60 bulls:100 cows), indicating that additional harvest of bulls is sustainable at this time.
