### **JUSTIFICATION:**

The moose population in Unit 22(B) West has remained stable at a low density with recruitment rates at or below 10% between 1999 and 2013. A survey completed in the spring of 2016 resulted in an abundance estimate of 728 observable moose (609-847 at 90% C.I.), and a recruitment rate of 14%. The Alaska Board of Game established a moose registration permit hunt in Unit 22(B) West which is administered with a quota to prevent overharvest. The department set an annual harvest quota of 34 bulls for regulatory year 2021-2022 based on the results of the 2016 spring abundance survey. The fall season closed Sept. 10, 2021 with a reported harvest of 25 bull moose. The winter season, RM843, opened January 1, 2022 with a harvest quota of 9 antlered bulls. The harvest is expected to be met by the closing date announced in this emergency order and no further harvest is warranted.
