

Make a Truce With Moose on the Loose!

(Can you say this 5 times fast?)

Alaska needs moose!

Moose are eating machines. They litter the ground with shredded leaves and moose droppings! This *litter* fertilizes the soil, helping to feed other plants and animals. Moose are also good food for bears, wolves and people!

PLEASE don't feed moose!

Feeding moose can make them dangerous and mean. Besides, it's against the law to feed a moose. Tell an adult if you see someone feeding a moose.

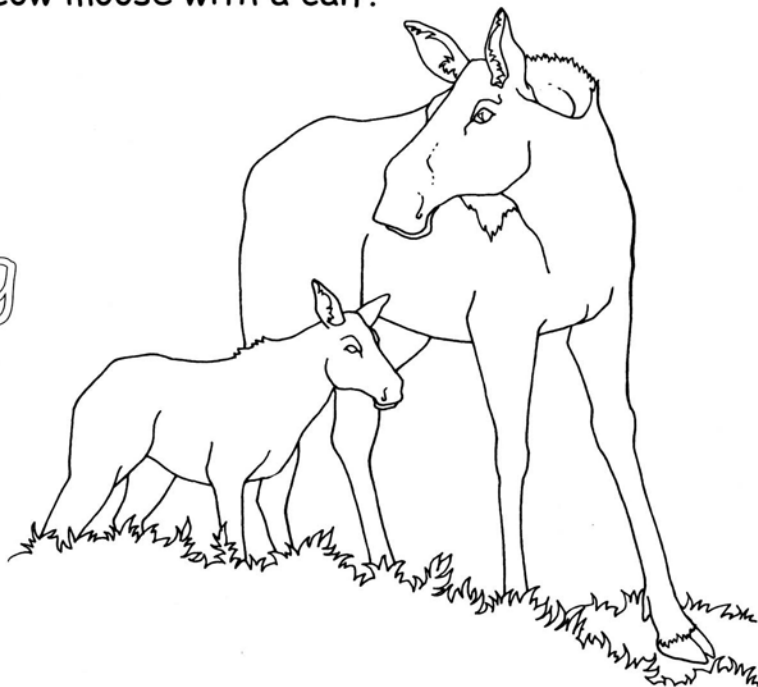

Is that moose upset?

When a moose is angry, its ears go back and the hair on its neck goes up. A really angry moose might even lick its lips. Back away from an angry or stressed moose. Run or get behind a tree if a moose comes after you!

Respect a moose's personal space!

Stay back! Moose can become very dangerous if they feel cornered or threatened. Be extra careful around a cow moose with a calf.

Have fun watching moose from a safe distance!

ALASKA'S ECOSYSTEMS NEED MOOSE.
