JUSTIFICATION:

Preseason projections suggest that the Kuskokwim River king salmon run in 2016 may be similar to 2015 when the Kuskokwim River experienced an estimated total run of approximately 158,000 and

spawning escapement of approximately 138,000 fish. In 2015, the drainagewide escapement goal was achieved and exceeded the upper bound of 120,000 king salmon, however, this was largely due to long term closures of the subsistence fishery. Restrictions to the subsistence king salmon fishery are expected again in 2016.

The anticipated closure of the subsistence fishery on the Kuskokwim River warrants a total closure of sport fishing for king salmon in the Kuskokwim River drainage and the prohibition of bait and multiple hooks.
