JUSTIFICATION: Southeast Alaska wild king salmon stocks are in a period of low production. Southeast Alaska king salmon escapements in 2016 -2018 were the worst on record with three and two out of the eleven king salmon indicator stocks meeting escapement goals in 2016 and 2017 years, respectively. In 2018 only four of the eleven king salmon indicator stocks met escapement goals. This trend of low production is expected to continue in 2019. The Chilkat River stock has not achieved its escapement goal in 6 of the past 7 years, the King Salmon river stock has not achieved its escapement goal in 5 of the past 6 years, and the Unuk river stock has not achieved its escapement goal in 4 of the past 6 years. During the 2017/2018 Alaska Board of Fisheries cycle these stocks were identified as stocks of concern prompting the development of specific action plans that outline conservative management measures for all fisheries to reduce the harvest of these stocks. This emergency order implements the conservative management measures outlined in the king salmon action plans for the sport fishery and, additional conservative management measures to reduce harvest of all wild Southeast Alaska king salmon stocks that are in a period of low production.

DISTRIBUTION: The distribution list for this emergency order is on file at the Region 1 Office of the Alaska Department of Fish and Game, Division of Sport Fish, P. O. Box 110024, Douglas, AK 99811, (907) 747-5551.
