JUSTIFICATION:

Harvest of black rockfish has exceeded 25,000 fish in 3 of the last 4 years and preliminary 2019 harvest information indicates one of the largest harvests to date. With the majority of this harvest coming from eastern Afognak and Kodiak islands, it is warranted to implement restrictions in this area to ensure sustainable harvests of rockfish given that they are long-lived, slow-growing and vulnerable to overfishing, particularly in localized areas. This area encompasses about 75% of the total Kodiak Management Area sport harvest of rockfish and is the primary area of effort due to the proximity to the Port of Kodiak. To ensure sustainable harvests of rockfish and implement provisions of the *Kodiak Black Rockfish Management Plan* adopted by the Board of Fisheries in January 2020, it is justified to reduce the nonresident bag limit for rockfish for much of eastern Afognak and Kodiak islands. The Board of Fisheries directed the department to implement restrictions for nonresident anglers first and include resident anglers as needed for further restrictions according to a prioritized list of criteria adopted in the management plan. Resident bag limits remain the same at this time, as published in the Southwest Alaska Sportfishing Regulations Booklet.
