INTRODUCTION

The statistics presented in this leaflet were compiled by the Statistics Section of the Department of Fish and Game. This statistical leaflet is partially financed by the Commercial Fisheries Research and Development Act (P.L. 88-309 as amended), project number 5-16-D-3, contract number N-044-26-72(G). The data from which these statistics were calculated were obtained from the commercial fishing industry. Fish tickets, which are completed each time a commercial fisherman sells fish, are the Department's source of catch data. The statistics shown in the catch tables (Part I) were summarized from approximately 300,000 fish tickets completed in 1971. The production tables (Part II) were compiled from the 1971 Alaska Commercial Processors' Annual Reports.

Weights listed in the catch tables (Part I) represent landed weights as reported to the Department on fish tickets. Values listed in the catch tables represent the value of the catch to the fishermen (dollars paid to the fishermen). All catch statistics are presented by region or area of catch, except halibut which is reported by region of landing. The production tables (Part II) present the weights of the finished products and their wholesale values (value to the processor). All production statistics are presented by region or area where the processing took place. Due to intrastate shipment of the catch before processing, the production statistics for a given area will not necessarily reflect the catch for that area.

1) Totals adjusted to eliminate duplication caused by floating processors operating in two or more regions and by individual plants processing more than one species of fish and/or shellfish and/or producing more than one type of product.

2) Adjusted for companies having more than one plant.

3) Represents employees engaged in processing and excludes fishermen.
