March 2010

The Fishery Management Reports series was established in 1989 by the Division of Sport Fish for the publication of an overview of management activities and goals in a specific geographic area, and became a joint divisional series in 2004 with the Division of Commercial Fisheries. Fishery Management Reports are intended for fishery and other technical professionals, as well as lay persons. Fishery Management Reports are available through the Alaska State Library and on the Internet: <http://www.sf.adfg.state.ak.us/statewide/divreports/html/intersearch.cfm>. This publication has undergone regional peer review.

ABSTRACT

This report describes the 2010 Kodiak Management Area (KMA) commercial Pacific herring *Clupea pallasii* sac roe fishery harvest strategy, and includes the 2010 guideline harvest levels (GHLs) by section, management changes from previous years, and reporting and registration requirements. The 2010 KMA areawide GHL is 6,075 tons and individual GHLs have been established for 41 sections. The areawide GHL is divided between purse seine gear and gillnet gear due to a regulatory allocative management plan (5AAC 27.535). The purse seine GHL is 4,440 tons (73.1% of the areawide GHL) and the gillnet GHL is 1,635 tons (26.9% of the areawide GHL).

There will be two types of fishing periods in the KMA; those that fall under the “standard” fishing schedule that is established in regulation (5 AAC 27.510), and those that occur in sections that are managed by emergency order (EO). Standard fishing periods for purse seine permit holders from April 15 to May 7 are from noon until 9:00 PM on odd-numbered days, and from 9:00 AM until noon on even-numbered days. From May 8 through June 30, fishing periods for purse seine permit holders are from noon until 10:00 PM on odd-numbered days, and from 9:00 AM until noon on even-numbered days. For gillnet permit holders standard fishing periods are from noon on odd-numbered days until noon on even-numbered days. Continuous fishing by gillnet permit holders may occur if participation and overharvest concerns are low, and will be announced by EO.

In order to maximize roe quality and control harvest rates the Village Islands/Uganik Bay, Danger Bay, Paramanof Bay/Foul Bay, and Inner Uyak Bay/Zachar Bay sections will be managed differently than most other section in the KMA. Fishing periods for these sections will be established by EO, herring will be sampled for age, sex, weight, length, and maturity from purse seine test sets, and time and area restrictions may be used to target the effort on large herring with highest roe content. To prevent gear conflicts and ease management of the fisheries where both gear types have an allocation, fishing will occur by each gear type on alternating days.

Key Words: Sac roe, herring, *Clupea pallasii*, guideline harvest levels (GHL), Kodiak Management Area (KMA), harvest strategy, Fisheries Management Report (FMR)

INTRODUCTION

The Alaska Department of Fish and Game (ADF&G) Commercial Fisheries Division staff in Kodiak will manage the 2010 Kodiak commercial Pacific herring *Clupea Pallasii* sac roe fishery. This report presents the harvest strategy for the Kodiak Management Area (KMA) herring sac roe fishery, including the guideline harvest levels (GHLs) by section, section assignment by gear, changes in management, and reporting and registration requirements for the 2010 fishery.

The Kodiak herring sac roe fishery is intended to occur in an orderly fashion, with minimal waste of resource and within conservation limits as determined by ADF&G, while striving for the highest quality product (5AAC 27.535 (e)(6)). The fishery will be managed in accordance with general statewide herring guideline harvest policies, which provide for catches in traditional inshore areas, management for the greatest value, and exploitation (harvest) not to exceed 20% of the available spawning biomass. Due to the uncertainty in estimating individual section populations, GHLs are established conservatively.

The KMA is divided into 13 districts that define areas used to manage the herring sac roe fishery (Figure 1; Table 1). Each district is further divided into smaller areas called sections. There are 81 sections in the KMA that define spawning areas or historical harvest locations. Current statistical charts, which illustrate districts and sections, are available at the ADF&G office in Kodiak.

GHLs are harvest projections within each section that are established annually by Kodiak ADF&G fishery management biologists preseason (Table 1). After a review of stock status trends for the entire KMA, ADF&G determines which sections will be open to commercial fishing and what level of harvest will be targeted. Each section’s GHL is set based on: 1) fishery performance during the preceding season or seasons (using total harvest, timing, duration of

fishery, or average school size), 2) trends in age composition, 3) spawn and juvenile herring observations, 4) aerial surveys, and 5) hydroacoustic surveys. Information from commercial fishermen and spotter pilots are also considered in setting a GHL.

2010 HARVEST STRATEGY

GUIDELINE HARVEST LEVELS

For the 2010 season, GHLs have been established for 41 sections (Table 1). A total of 13 sections had little or no harvest during the last 10 years and are designated as exploratory in 2010. Exploratory areas are open to both gear types and have no set GHL. The remaining 27 sections will remain closed, based on either low abundance or lack of herring sac roe harvests.

The 2010 area-wide GHL of 6,075 tons (Table 1) is an increase of 1,310 tons from the 2009 GHL of 4,765 tons (Table 2).

HARVEST ALLOCATION

ADF&G shall manage the sac roe herring fishery to provide opportunities for gillnet permit holders to harvest approximately 25% of the total preseason GHL and purse seine permit holders to harvest approximately 75% (Table 1; 5 AAC 27.535 (e)). With few exceptions, this is accomplished by assigning sections to only purse seine gear or only gillnet gear. Each district having more than one section that is open for fishing will have approximately 20 to 30 percent of the GHL for the district allocated to the gillnet permit holders and 70 to 80 percent allocated to the purse seine permit holders (5AAC 27.535 (e)(2)(D)). Determining which gear type will be assigned to a section is based on: 1) estimated biomass and age composition of the stock(s) within a section, 2) historical harvest by gear from that section, 3) historical harvest timing, 4) management concerns, 5) determining allocative percentages, and 6) input from fishery participants as solicited during a preseason meeting..

From May 1 through June 30, ADF&G may open any area with remaining GHL to any gear group if the fishery is not likely to result in overharvest (5AAC 27.535 (e)(1)(C)). After April 30, CFEC permit holders must be registered with ADF&G before participating in the sac roe herring fishery (5AAC 27.510 (a)(4)).

SECTION ASSIGNMENTS

The following adjacent sections will be combined and managed as a single section for the 2010 sac roe herring season (5AAC 27.535 (e)(1)(A)):

- Izhut Bay, Kitoi Bay, and MacDonald Lagoon
- Village Islands, Northeast Arm Uganik, East Arm Uganik, and South Arm Uganik bays
- Paramanof and Foul bays
- Inner Uyak and Zachar bays
- Outer Deadman and Inner Deadman bays

A section may be assigned to both purse seine and gillnet gear in order to achieve the allocative split by gear type within a district.

- The combined Village Islands/Uganik Bay and the Danger Bay sections will be opened to both gear types in 2010 with each gear type assigned a portion of the GHL.

The remaining sections will be assigned as follows.

<u>Purse Seine Only*</u>	<u>Gillnet Only*</u>	<u>Exploratory (both gear types)</u>
Tonki Bay	Malina Bay	Delphin Bay
Paramanof Bay/Foul Bay	Raspberry Strait	Bluefox Bay
Izhut/Kitoi/MacDonald	Perenosa Bay	Geese-Twoheaded
Inner Uyak/Zachar Bay	Viekoda Bay	Kaiugnak Bay
Inner/Outer Deadman Bay	Terror Bay	SW. Sitkalidak Strait
E. Upper Olga Bay	West Uganik Passage	Newman Bay
W. Upper Olga Bay	Browns Lagoon	Tanginak Anchorage
Three Saints Bay	Spiridon Bay	Inner Kukak Bay
West Sitkalidak Strait	Inner Alitak	Inner Katmai Bay
East Sitkalidak Strait	Sulua Bay	Alinchak Bay
Outer Kiliuda Bay	Lower Olga Bay	Puale Bay
Outer Ugak Bay	Barling Bay	Portage Bay
Kizhuyak Bay	Shearwater Bay	Wide Bay
	Inner Kiliuda Bay	
	Inner Ugak Bay	
	Womens Bay	
	Anton Larsen Bay	
	Sheratin Bay	

* Beginning May 1, sections may no longer be exclusive to gear type.

Of the total 6,075 ton GHL, 4,440 tons of herring (73.1%) will be allocated to purse seine permit holders and 1,635 tons (26.9%) will be allocated to gillnet permit holders (Table 1), in keeping with regulatory management plan (5 AAC 27.535 (e)).

FISHING PERIODS

Daily Fishing Periods for Most Purse Seine and Gillnet Sections

Unless otherwise specified by emergency order (EO), herring may be taken during the sac roe season from April 15 through June 30, as follows:

- For purse seine permit holders: From April 15 through May 7, fishing periods for purse seine permit holders are from noon until 9:00 PM on odd-numbered days, and from 9:00 AM until noon on even-numbered days. From May 8 through June 30, fishing periods are from noon until 10:00 PM on odd-numbered days, and from 9:00 AM until noon on even-numbered days (5AAC 27.510 (a)(1)).
- For gillnet permit holders: From April 15 through June 30, fishing periods for gillnet permit holders are from noon on odd-numbered days until noon on even-numbered days (5AAC 27.510 (a)(2)). Continuous fishing, announced by EO, may occur if participation and overharvest concerns are low.

Regulations stipulate a 24-hour closed period for both gear types from noon on even-numbered days until noon on odd-numbered days (5AAC 27.510). The “day-on, day-off” schedule applies to most sections allocated to seine gear, except for those to be managed under EO authority. It is anticipated that gillnet effort will be low in 2010 due to market conditions. As a result, gillnet

only section fishing periods will likely be extended by EO after the initial opening until further notice. If effort is higher than anticipated, fishing periods in gillnet only sections will revert to the schedule in regulation.

ADF&G may use EO authority to restrict fishing time and close areas in any section if overharvest concerns exist during the season. ADF&G may also use EO authority to close sections late in the season if resources are not available to monitor the fishery and there are overharvest concerns.

PURSE SEINE FISHERY MANAGEMENT

The department will manage the Outer Ugak Bay, Village Islands/Uganik Bay, Danger Bay, Paramanof/Foul Bay, and Inner Uyak/Zachar Bay sections different than other purse seine sections within the KMA. Openings of these sections may be delayed and some of these sections will be managed inseason by EO to maximize roe percentage of the landed product and to control harvest rates.

Outer Ugak Bay Section

The initial opening in the Outer Ugak Bay Section will be delayed until an ADF&G field crew can be stationed to monitor the fishery. A news release will be issued 24 hours in advance of any opening in this section. Once open, fishing periods will be as stated in 5 AAC 27.510 (a)(1). Fishermen are strongly encouraged to sample catches for roe quality and size of herring prior to landing to ensure the highest value of product.

Village Islands/Uganik Bay sections

The Village Islands, Northeast Arm Uganik, East Arm Uganik, and South Arm Uganik sections will be managed as one section with a total GHL of 1,500 tons (Table 1). In order to properly allocate herring within the Uganik District, both purse seine and gillnet gear will be allowed to fish within these combined sections. For the Village Islands/Uganik Bay sections, the purse seine GHL is 1,200 tons (Table 1).

These sections will be actively managed for roe quality and size of herring by the ADF&G management biologist aboard the ADF&G vessel *R/V K-Hi-C*. ADF&G will attempt to target the fishery on herring with approximately 11% roe recovery on the grounds. Permit holders wishing to fish in these sections are urged to meet with the management biologist at 10:00 AM Thursday, April 15, aboard the *R/V K-Hi-C* to volunteer for test fishing and discuss how the fishery will be managed.

To alleviate the potential for gear conflicts, it is expected that Village Islands/Uganik Bays openings by gear type will be separated by day or time. The department will attempt to prosecute purse seine fisheries on odd-numbered days of the month of April and fishing time will likely begin at noon and is unlikely to continue after 9:00 PM. Once the GHL for one gear type has been met, the fishing time for the other gear type that has not met its allocation could occur on any day.

Danger Bay Section

The Danger Bay Section will be managed with a total GHL of 500 tons (Table 1). In order to properly allocate herring within the Afognak districts, both purse seine and gillnet gear will be

allowed to fish within this section. For the Danger Bay Section, the purse seine GHL is 300 tons (Table 1).

This section will be actively managed for roe quality and size of herring by the ADF&G management biologist aboard the ADF&G vessel *R/V Resolution*. ADF&G will attempt to target the fishery on herring with approximately 11% roe recovery on the grounds. Permit holders wishing to fish in these sections are urged to meet with the management biologist at 10:00 AM Thursday, April 15, aboard the *R/V Resolution* to volunteer for test fishing and discuss how the fishery will be managed.

To alleviate the potential for gear conflicts, it is expected that Danger Bay openings by gear type will be separated by day or time. The department will attempt to prosecute purse seine fisheries on odd-numbered days of the month of April and fishing time will likely begin at noon and is unlikely to continue after 9:00 PM. Once the GHL for one gear group has been met, the fishing time for the other gear type that has not met its allocation could occur on any day.

Paramanof Bay/Foul Bay sections

The Paramanof Bay/Foul Bay sections will be combined and managed together with a 200 ton GHL for purse seine gear (Table 1). The Paramanof Bay/Foul Bay sections will be managed for roe quality and size of herring. ADF&G will attempt to target the fishery on herring with approximately 11% roe recovery on the grounds. The *R/V Resolution* will move to Paramanof Bay to monitor the fishery upon completion of its monitoring duties in Danger Bay. ADF&G will issue a news release with at least 24-hours advanced notice for a potential fishing period in the Paramanof Bay/Foul Bay sections. Test fishing will occur prior to any fishery to ensure high quality herring are on the grounds.

Inner Uyak Bay/Zachar Bay sections

The Inner Uyak Bay/Zachar Bay sections will be combined and managed together with a GHL of 300 tons for purse seine gear (Table 1). The Inner Uyak Bay/Zachar Bay sections will be managed for roe quality and size of herring. ADF&G will attempt to target the fishery on herring with approximately 11% roe recovery on the grounds. The *R/V Resolution* or the U.S. Fish and Wildlife Service (USFWS) vessel *R/V Ursa Major II* will be stationed in Uyak Bay or Zachar Bay to manage the fishery; however, the vessel and biologist will not be available on April 15. The *R/V Resolution* will initially be in the Danger Bay and Paramanof/Foul Bay sections to monitor those fisheries and the *R/V Ursa Major II* will initially be monitoring fisheries on the Eastside. ADF&G will issue a news release with at least 24-hours advanced notice for a potential fishing period for the Inner Uyak Bay/Zachar Bay sections. Once the *R/V Resolution* or the *R/V Ursa Major II* are in the Inner Uyak Bay/Zachar Bay sections, ADF&G will seek test fish volunteers.

Permit holders wishing to fish in this section are urged to meet with the management biologist aboard the *R/V Resolution* or *R/V Ursa Major II* to volunteer for test fishing and to discuss how the fishery will be managed.

GILLNET FISHERY MANAGEMENT

Gillnet fishing periods for most sections will likely be modified by EO to allow continuous fishing. However, the Village Islands/Uganik Bay and Danger Bay sections will not follow this schedule.

Village Islands/Uganik Bay sections

In order to properly allocate herring within the Uganik District, both purse seine and gillnet gear will be allowed to fish within these combined sections. For the Village Islands/Uganik Bay sections, the gillnet permit holders GHL is 300 tons (Table 1).

Gillnet fishing periods will begin after at least one successful purse seine fishing period has occurred. This should ensure that high quality herring are present on the grounds. For gillnet gear, fishing periods will be established by EO and likely begin shortly after the last purse seine fishing period for that day. Gillnet fishing periods are likely to be at least 24-hours in length.

If no gillnetters are on the grounds the day following a purse seine opening, ADF&G may allow another day of purse seine fishing. Gillnetters are encouraged to contact the ADF&G biologist onboard the *R/V K-Hi-C* if they intend to fish this section. Once the GHL for one gear group has been met, the fishing time for the other gear type that has not met its allocation could occur on any day.

Danger Bay Section

In order to properly allocate herring within the Afognak districts, both purse seine and gillnet gear will be allowed to fish the Danger Bay Section. The GHL for gillnet permit holders is 200 tons (Table 1).

Gillnet fishing periods will begin after at least one successful purse seine fishing period has occurred. This should ensure that high quality herring are present on the grounds. For gillnet gear, fishing periods will be established by EO and likely begin shortly after the last purse seine fishing period for that day. Gillnet fishing periods are likely to be at least 24-hours in length.

If no gillnetters are on the grounds the day following a purse seine opening, ADF&G may allow another day of purse seine fishing. Gillnetters are encouraged to contact the ADF&G biologist onboard the *R/V Resolution* if they intend to fish this section. Once the GHL for one gear group has been met, the fishing time for the other gear type that has not met its allocation could occur on any day.

TEST FISHING

ADF&G staff will not conduct roe recovery testing; industry personnel (processor technicians, fishermen, or tendermen) are expected to determine roe quality. Instructions on how to determine roe quality and recovery percentages may be available from buyers and processors. Additionally, processors establish minimum size requirements (average weights) for the herring that they will purchase. All fishermen are urged to check with their buyer to determine what roe recovery and size limits will be required.

Prior to any fishing period in the Village Islands/Uganik Bays, Danger Bay, Paramanof Bay/Foul Bay, and the Inner Uyak Bay/Zachar Bay sections, the management biologist on the grounds will seek volunteer fishermen to conduct test sets to sample fish size and roe quality. The management biologist will choose the boats to make test fishing sets. In some circumstances, more than one boat may be needed. All test fishing will be coordinated and directed by the ADF&G management biologist on the grounds. No test set will be allowed without first consulting the management biologist, either in person or via VHF radio channel 6.

Small amounts of herring from each test set will be kept to determine marketability. Approximately 75 to 150 pounds of herring will be randomly selected from each set to be tested for mature roe and average weight (grams). Sampling will occur onboard the fishing vessel or may be transported to a central fishing boat or tender for later testing. Management biologists will attempt to manage fisheries so that industry roe recovery and size requirements are met or exceeded. ADF&G will broadcast test fishery results on VHF channel 6.

MANAGEMENT FROM MAY 1 TO JUNE 30

Based on regulations adopted by the Alaska Board of Fisheries (BOF) in 2009, ADF&G may open any section with unharvested GHL to both gear groups beginning May 1 unless overharvest concerns exist. Some areas may not open to both gear groups until an ADF&G field crew is stationed on the grounds to monitor the fishery. At least 24-hours of advance notice will be given prior to opening an area to both groups.

ADF&G AND INDUSTRY COOPERATION

Management of the herring sac roe fishery relies primarily on analysis of harvest data collected by ADF&G field crews. Timely harvest information is essential to managing the Kodiak herring fishery. In addition to the management biologists aboard the *R/V Resolution*, *R/V K-Hi-C*, and the *R/V Ursa Major II*, field crews will be stationed in mobile camps in sections where the highest fishing activity is expected (Table 3). Field crews will initially be stationed at Ameer Bay and Kitoi Bay. On-the-grounds monitoring of fisheries is limited or unavailable in some sections, and may occur incidentally to monitoring efforts in adjacent sections. ADF&G staff will make frequent contact with permit holders to collect harvest data, fleet movement information, spawn observations, and observations of juvenile and adult herring concentrations.

Permit holders and tender operators are encouraged to keep field crews aware of herring harvests. In exploratory sections and sections where a field crew is not present, fishermen, tenders, or buyers should immediately contact area management biologists in Kodiak or onboard the *R/V Resolution*, *R/V K-Hi-C*, or the *R/V Ursa Major II* when a harvest occurs. Past cooperation between the ADF&G, the fishing fleet, and buyers has been excellent, and it is hoped that this trend will continue. If cooperation is lacking, closure of sections may be necessary, and future openings will be closely evaluated. Fishermen are strongly encouraged to sample catches prior to landing in order to harvest the highest value product possible.

Permit holders and spotter pilots are encouraged to provide biomass estimates, juvenile herring observations, and spawn observations to field crews or management staff. Past cooperation has helped staff evaluate stock status and gain critical management information. All information from fishermen and spotter pilots will remain confidential. Of particular interest are any observations of herring in closed management sections. Timely information will be used by management staff to conduct aerial or hydroacoustic surveys to assess herring abundance.

Samples from commercial herring harvests will be collected by field crews and management biologists. These are primarily used to monitor age composition and, when used with other stock performance indicators, assist in determining stock status. Support and assistance from the industry are necessary for this style of fishery management to be successful. This support should result in a more manageable fishery, greater economic benefit to the permit holders, and ensure the long-term health of the KMA herring stocks.

CATCH REPORTING FOR BUYERS AND TENDERS

Processors and independent tender operators are required to provide daily catch reports by section by 9:00 AM. Herring onboard tenders that have not yet been delivered to a processing facility must also be reported. Timely and accurate harvest reports received from field crews, permit holders, tender operators, spotters, and processors are critical in the assessment of herring harvests and guide the management of the fishery. Inaccurate or late information could result in premature area closures or overharvest. Catch reporting procedures and ADF&G contact information is listed on the registration permit.

REGISTRATION PERMIT

Each KMA tender operator and buyer must obtain a registration permit from ADF&G in the Kodiak office, either in person or through an authorized agent (5AAC 27.540). A registration permit is required prior to taking fish onboard the tender or taking fish at the processing plant. Tenders are required to complete ADF&G fish tickets for each delivery. The fish ticket must have the fisherman's permit information legibly recorded, and must show how many pounds or tons of fish were harvested (the on-the-grounds weight), date of harvest, and section from which the fish were harvested.

PERMIT HOLDER REGISTRATION

After April 30, CFEC permit holders must be registered with ADF&G before participating in the sac roe herring fishery (5 AAC 27.510 (a)(4)). It is the responsibility of the permit holders to keep ADF&G informed of fishing activity and report herring harvests daily. The registration permit will outline reporting requirements by gear type. Failure to maintain contact with ADF&G will result in closures.

Purse seine permit holders are reminded that they may use only one purse seine vessel to harvest herring; this may be either the vessel identified on the permit card or a replacement vessel. If a Kodiak sac roe seine permit holder intends to fish with a different vessel than is listed on their permit card, they must register the replacement vessel with Kodiak management staff (5 AAC 27.525 (d)).

TRANSPORTER PERMITS

All KMA herring sac roe permit holders that intend to transport herring, other than their own commercially harvested herring, are required to have in their possession a fish transporter permit (AS 16.05.671). Permit applications are available at the Kodiak ADF&G office.

EMERGENCY ORDER ANNOUNCEMENTS

Different types of EOs will be issued in season: 1) announcements of short commercial fishing periods or closures in the Village Islands/Uganik Bay, Danger Bay, Paramanof Bay/Foul Bay, and the Inner Uyak Bay/Zachar Bay sections, and 2) announcements of in-period fishery closures in all other sections, which follow the standard fishing schedule. When a preseason GHF for a section is approached or achieved, that section will be closed for the remainder of the season. Due to the rapid pace of the harvest in certain locations, in-period closures are likely. When in-period closures are necessary, there may be as little as five minutes advance notice prior to the closure time, or less if appropriate. In-period closures will be announced on VHF channel 6.

Fishermen and tender operators should monitor VHF channel 6 to remain aware of section closures.

At any time during the season, if ADF&G determines that herring stock abundance is below preseason expectations, sections may be closed prior to reaching their GHL.

A news release will be issued to announce fishery decisions such as openings, closures, area restrictions, etc. News releases are posted on the ADF&G website, distributed to processors, local radio stations, newspapers, and other interested parties. Contact the Kodiak herring area management biologists at the Kodiak ADF&G office to be added to the fax or email distribution lists for herring news releases.

All permit holders, tender operators, and processors are responsible for staying updated on section closures as they occur in season. Fishery information can be obtained through the following:

- 1) Contact the herring management staff in the Kodiak office, in person, by telephone at 486-1830, or by using Matrix AlaskaNet Satellite Dispatch at #7410.
- 2) Contact ADF&G field personnel on VHF channel 6 or using Matrix Alaska Net Satellite Dispatch (*R/V Resolution* - #7411, and *R/V K-Hi-C* - #7412).
- 3) Contact any local herring processor for the latest Kodiak herring news release.
- 4) Call the ADF&G 24-hour recorded message phone at 486-4559.
- 5) Obtain a copy of the most recent news release from the Kodiak ADF&G office at 211 Mission Road (copies are available 24 hours per day in a bin located outside the main entrance to the building).
- 6) Listen to the ADF&G reports broadcast over the local AM and FM radio stations (consult stations for broadcast times):

AM 560 KVOK
101.1 FM KRXX
100.1 FM KMXT

- 7) News releases may also be found on the web at:
<http://www.cf.adfg.state.ak.us/region4/finfish/herring/herrhom4.php>
- 8) Contact department biologists after hours at the following numbers:

James Jackson – 942-2097
Geoff Spalinger – 942-4822
Joe Dinnocenzo – 942-5014

HERRING TEST FISHERY PROGRAM

A herring test fishery program is proposed for the 2010 season to generate funds to be used for Kodiak herring fishery management and research projects. However, herring prices may be too low this year to warrant test fishing. ADF&G will request bids from processors and/or fishermen for the harvest and purchase of herring if prices approach \$400/ton. Interested skippers should contact a Kodiak herring management biologist at the ADF&G office for more details (Table 3).

TABLES AND FIGURES

Table 1.–List of districts and management sections, guideline harvest levels (GHLs), closed sections, and district allocation percentages for the herring sac roe fishery, Kodiak Management Area, 2010.

Statistical Area	Management Section	2010 Guideline

^a Exvessel values are based on dock delivered herring and inseason data.

^b Beginning in 2000, an allocative harvest strategy was in effect.
