## ADF&G TECHNICAL DATA REPORTS

This series of reports is designed to facilitate prompt reporting of data from studies conducted by the Alaska Department of Fish and Game, especially studies which may be of direct and immediate interest to scientists of other agencies.

The primary purpose of these reports is presentation of data. Description of programs and data collection methods is included only to the extent required for interpretation of the data. Analysis is generally limited to that necessary for clarification of data collection methods and interpretation of the basic data. No attempt is made in these reports to present analysis of the data relative to its ultimate or intended use.

Data presented in these reports is intended to be final, however, some revisions may occasionally be necessary. Minor revision will be made via errata sheets. Major revisions will be made in the form of revised reports.

## PREFACE

The purpose of this bibliography is to present a comprehensive list of the literature published by the Alaska Department of Fish and Game on the salmon fisheries of the Yukon River. It is important to realize that this is not a complete literature search on the subject as it does not include papers published by other agencies, universities, or professional journals. In addition, it does not include papers dealing less directly with Yukon River salmon fisheries, but which may still be of interest to the investigator (i.e., Placer mining and its affects on salmon habitat, Japanese high seas fishery interceptions, etc). This is not to deny the importance of these topics and their relevance to the study of Yukon River salmon.

The Department's Informational Leaflet and Technical Data Report series receive wide distribution, but many of the Regional and Area level reports are generally not well known outside of a small group working in the field. It is hoped that this bibliography will be of use to those who need information on the salmon fisheries of the Yukon River. Part I presents a listing by author, and Part II by report category. Note that reports are listed under only one category in Part II.
