Informational Packet

Information Packets *ARE*:

- **Intended to help inform Working Group discussions.**
- **To be viewed and used in context with Working Group meetings only.**

Packets *ARE NOT*:

- **To be viewed as standalone documents.**
- **A final say on fisheries management decisions.**

Please use this information responsibly:

Packet information is an incomplete snapshot of an ongoing discussion and changing conditions. Packet information should not be reproduced for any purpose other than to describe Working Group meeting discussions.

Misuse of Packet information can contribute to misunderstandings that can **cause harm to salmon users** and potentially **damage salmon resources**.

Ask Questions: ADF&G staff will be happy to answer biology and management questions. Please call **1-855-933-2433** to reach ADF&G Kuskokwim Area staff.

Attend Meetings: Each Working Group meeting is announced at least 48 hours prior to time and date of meeting. In addition, each meeting is recorded. Recordings can be found here:

Informational Packet

Coho Salmon (8/14)

- The BTF daily CPUE was **117**.
- The BTF cumulative CPUE is **1,935**.
- **4** years since 2008 (**44%**) fell below this cumulative CPUE.
- **77%** of the run is complete based on historical average run timing.
- No run timing forecast is available for coho salmon.
- **10 - 18%** of the run is expected to pass in the next 5 days.
- Over the last 3 days, coho salmon made up **98%** of the BTF catches, compared to **98%** on average.

Coho Figure 1. *Left:* predicted cumulative EOS BTF CPUE according to various run timing scenarios: central 80% (grey region) and the historical median. The dashed horizontal line shows the EOS value from 2016 and the dotted horizontal line shows the average since 2008. *Right:* The cumulative BTF CPUE from 2017 plotted along with four years intended to represent a range of early/late and small/large index values.

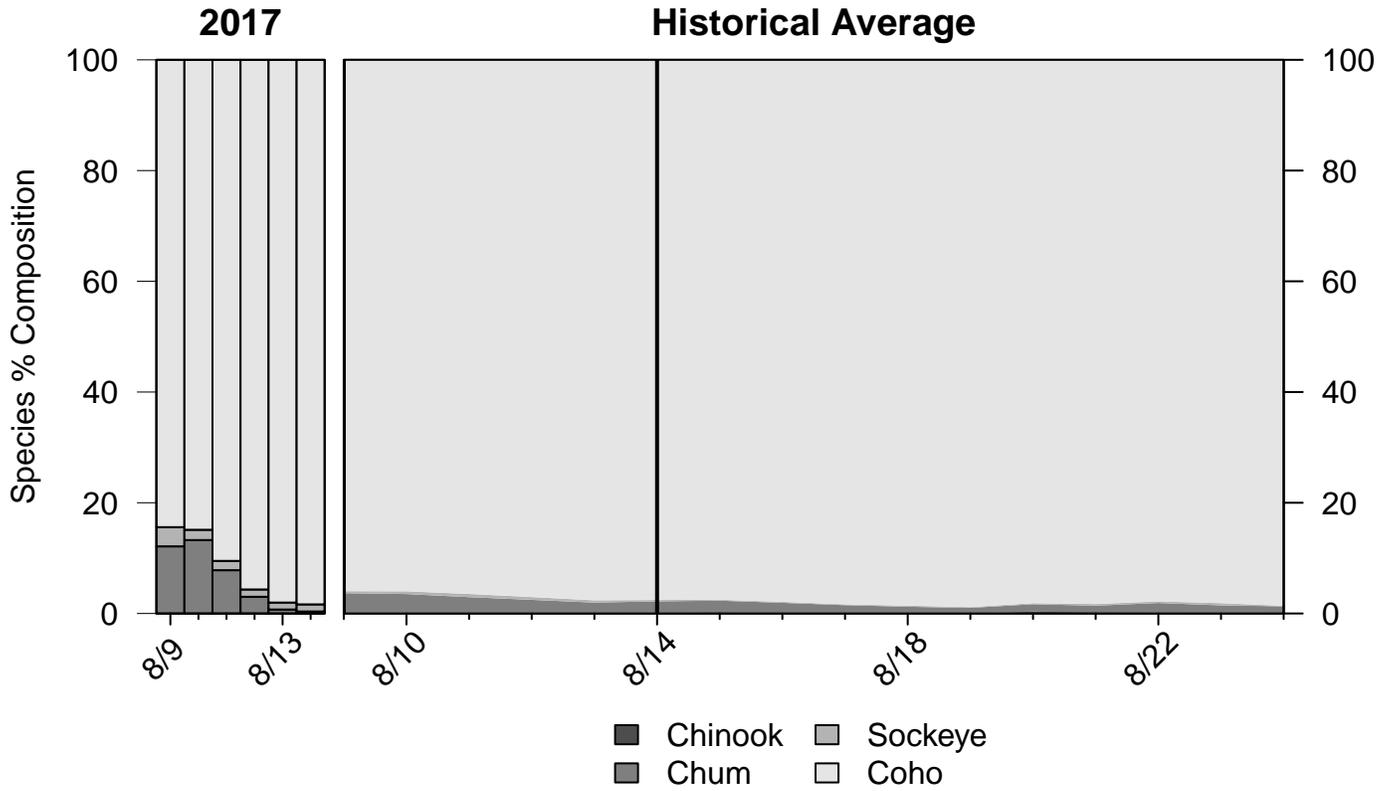

For more detailed information, see the *Coho salmon appendix* at the end of this document.

Chinook Salmon Summary

- The BTF daily CPUE was **0**.
- The BTF cumulative CPUE is **375**.
- If the run ended on 8/14, 50% of the run would have passed BTF on **6/27**, which is **4 days later** than average.
- The sonar completed operations on 7/26 with an EOS cumulative passage of **61,500 (45,800 - 77,100)**.
- The ATF completed operations on 7/15 with an EOS cumulative CPUE of **6,508**, compared to **2,729** in 2016 and **2,916** in 2015.
- The table below shows cumulative CPUE from the BTF from 2017 and in previous years.

Subsistence Division Update to the Working Group, 8/16/2017

The *Lower Kuskokwim* Inseason subsistence harvest and effort monitoring project has wrapped up fieldwork for the season. Since the previous Working Group meeting on August 2, we have received contact from a few of our volunteer fishermen, all of whom indicated that they are finishing up their fishing for the season but will continue to target some coho.

The *Middle Kuskokwim* Inseason subsistence harvest and effort monitoring project has also completed fieldwork for the season. In partnership with Native Village of Napaimute staff, we surveyed 142 households (approximately 32% sample) in Kalskag, Aniak, Chuathbaluk, Napaimute, Crooked Creek, Georgetown, Red Devil, Sleetmute, and Stony River. From July 24 through August 12 we have contacted 46 households from Chuathbaluk to Stony River. This most recent information is summarized in the figure below.

To assess how sample households have progressed toward their goals for total salmon harvest for the season, people were asked the following question: *How far along is your household with salmon fishing this year?* Each person was asked to choose from one of the following possible responses: *Not fishing this year, Just starting, one quarter, one half, three quarters, or done.* Several respondents explained that their households are mostly done fishing for salmon, but will continue to fish for coho. These responses were included in the “Done/fishing for coho” column in the figure. Respondents were also asked if they have met their needs for salmon for the year (*Yes or No*). Those responses are shown in the columns in the right side of the figure.

Supplemental Kuskokwim River Salmon Escapement Data

Salmon escapement projects are located upriver from where the majority of salmon harvest occurs. As such, escapement data provide limited information about the status of salmon runs in season. Data from escapement projects are primarily used post season to assess escapement goals and trends.

Daily escapement information can be viewed online at the ADF&G Kuskokwim Management Area Fish Counts webpage. This can be accessed through the following link:

<http://www.adfg.alaska.gov/index.cfm?adfg=commercialbyareakuskokwim.salmon#fishcounts>
