INTRODUCTION

Purpose

The Alaska Department of Fish and Game has the authority to administer AS 16.05.870. The Catalog of Waters Important to the Spawning, Rearing or Migration of Anadromous Fishes (referred to as "Anadromous Waters Catalog") contains a record of the streams, rivers and lakes documented as used by anadromous fish for spawning, rearing and migration. The purpose of the Catalog is to aid in the administration of the statute. Accordingly, the Catalog was revised in 1981 and 1982 by the Alaska Department of Fish and Game in compliance with the 1980 amendment to AS 16.05.870, set out below.

Authority

Implementation of AS 16.05.870 is carried out through the Anadromous Fish Protection Permit which can be obtained from the appropriate ADF&G Regional Habitat Supervisor on a Waterway/Waterbody Use Request Form. The applicant may be required to submit plans for the proposed work, and plans for the protection of fish and game, and the approximate date the construction or use will begin. Refer to section "Anadromous Fish Protection Permit."

Plans for the work are reviewed by Habitat Division personnel and approval given for procedures which have minimal or no harmful effects on fish or game or their habitats. In some cases, work may be restricted to certain seasons to avoid interference with fish or recommendations given for operational methods which would have minimal effect upon spawning and rearing areas. In some instances, damage may be unavoidable and the permit may be withheld.

The Law

> "Sec. 16.05.870. Protection of fish and game. (a) The Commissioner shall, in accordance with the Administrative Procedure Act (AS 44.62) specify the various rivers, lakes, and streams or

parts of them that are important for the spawning, rearing or migration of anadromous fish.

(b) If a person or governmental agency desires to construct a hydraulic project, or use, divert, obstruct, pollute, or change the natural flow or bed of a specified river, lake, or stream, or to use wheeled, tracked, or excavating equipment or log-dragging equipment in the bed of a specified river, lake, or stream, the person or governmental agency shall notify the Commissioner of this intention before the beginning of the construction or use.

(c) The Commissioner shall acknowledge receipt of the notice by return first class mail. If the Commissioner determines to do so, he shall, in the letter of acknowledgement, require the person or governmental agency to submit to him full plans and specifications of the proposed construction or work, complete plans and specifications for the proper protection of fish and game in connection with the construction or work, or in connection with the use, and the approximate date the construction, work, or use will begin. The Commissioner shall approve the proposed construction, work or use in writing unless he finds the plans and specifications insufficient for the proper protection of fish and game. If the Commissioner finds the plans and specifications insufficient for the proper protection of fish and game, he shall notify the person or governmental agency which submitted the plans and specifications of his findings by first class mail. The person or governmental agency may, within 90 days of receipt of the notice, initiate a hearing under AS 44.62.370. The hearing is subject to AS 44.62.330 - 44.62.630."

"Sec. 16.05.880. Violation of Paragraphs 870-895 of this chapter. If a person or governmental agency begins construction on a work or project or use for which notice is required by paragraph 870 of this chapter without first providing plans and specifications subject to the approval of the Commissioner for the proper protection of fish and game, and without first having obtained written approval of the Commissioner as to the adequacy of the plans and specifications submitted for the protection of fish and game, his is guilty of a misdemeanor. If a person or governmental agency is convicted of violating paragraphs 870-895 of this chapter or continues a use, work or project without fully complying with paragraphs 870-895 of this chapter, the use, work, or project is a public nuisance and is subject to abatement. The cost of restoring a specified river, lake, or stream to its original condition shall be borne by the violator and shall be in addition to the penalty imposed by the court."

"Sec. 16.05.890. Emergency situations exempted from paragraph 870 of this chapter. In an emergency arising from weather or stream flow conditions, the Department, through its authorized representatives, shall issue oral permits to a riparian owner for removing obstructions or for repairing existing structures without the necessity of submitting prepared plans and specifications as required by paragraph 870 of this chapter."

"Sec. 16.05.895. Penalty for causing material damage. If a person or governmental agency fails to notify the Commissioner of any construction or use that causes material damage to the spawning beds or prevents or interferes with migration of anadromous fish, the person or governmental agency shall be guilty of a misdemeanor."

"Sec. 16.05.900. Penalty for violations. (a) A person who violates paragraphs 830, 870-895, or 920 of this chapter or any rule or regulation promulgated under this chapter is guilty of a misdemeanor and, upon conviction, is punishable by a fine of not more than $1,000 or by imprisonment for not more than six months, or by both. A person who violates a rule or regulations promulgated under this chapter for the regulation of commercial fisheries shall be punished as provided in paragraph 720 of this chapter.

(b) The court shall transmit the proceeds of all fines to the proper State officer for deposit in the general fund of the State."

ANADROMOUS FISH PROTECTION PERMIT

Anadromous Fish Protection (Title 16) Permits are required "to construct a hydraulic project or use, divert, obstruct, pollute or change the natural flow or bed" of a river, lake or stream contained in the Anadromous Waters Catalog or "to use wheeled, tracked or excavating equipment or log-dragging equipment in the bed" of a river, lake or stream listed in the Catalog. (quoted portions from AS 16.05.870(b)) This includes construction, road crossing, gravel removal and use of vehicles of 5,000 pounds gross weight or heavier in the waterway. Permits may also be required for bank stabilization projects.

A person or agency desiring to use the waterway can obtain information about the permit requirements from the Alaska Permit Information Center (refer to Figure 1). The Permit Information Center will advise the potential user which permits may be required and who to contact. Permits from the Army Corps of Engineers, the Alaska Department of Environmental Conservation, and the Alaska Department of Natural Resources as well as the Alaska Department of Fish and Game may be required for certain activities or work in specific waterways.

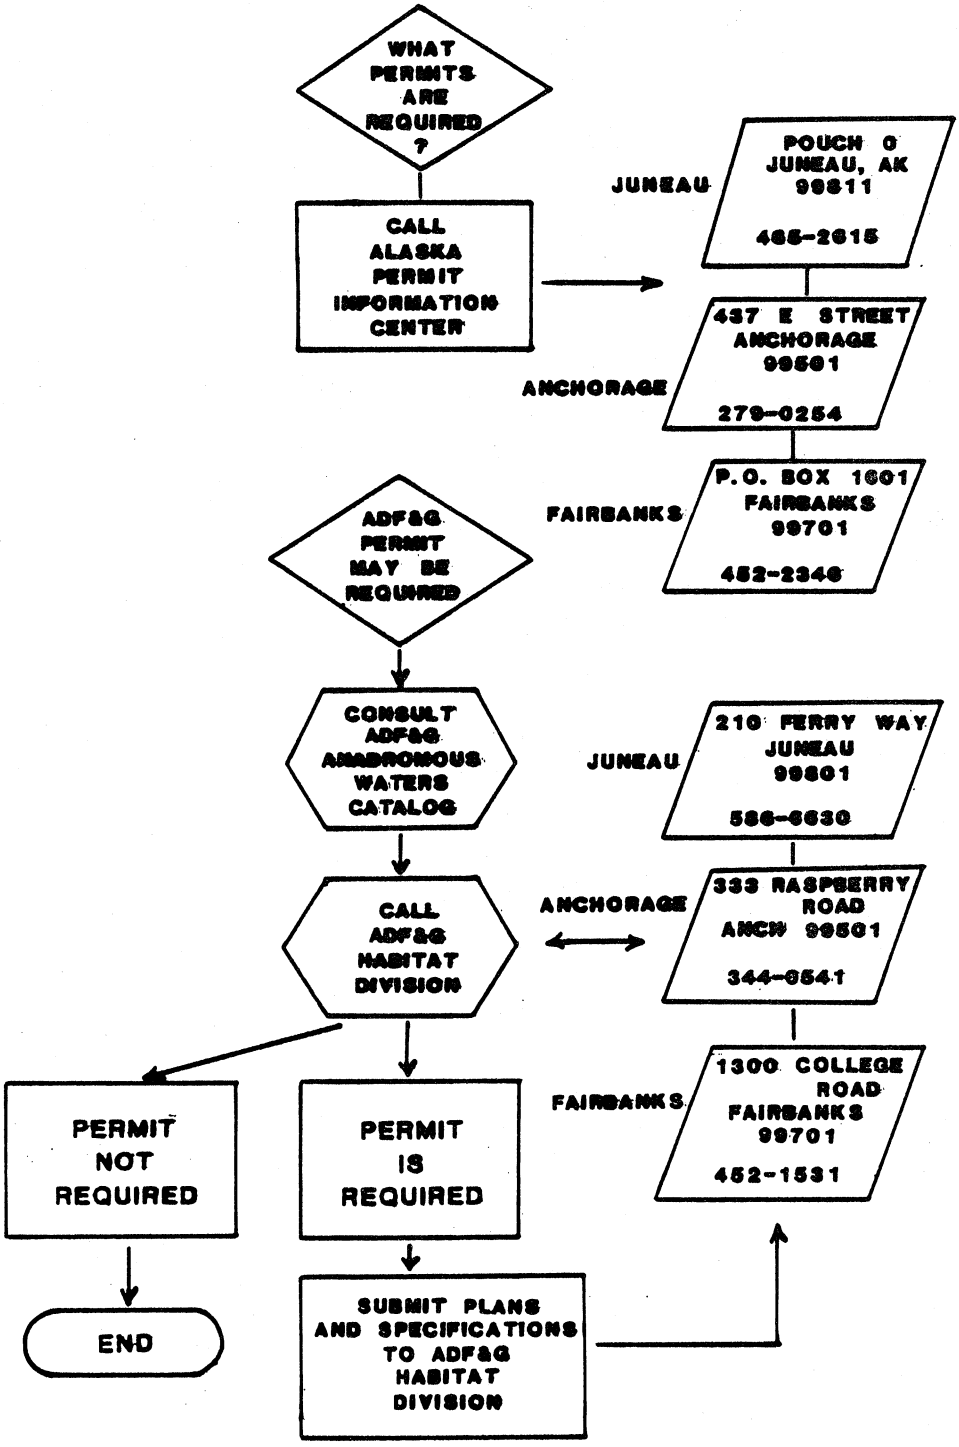
Applications for Title 16 permits from the Department of Fish and Game may be required, as indicated in Figure 1. The Habitat Division will inform the applicant about what information is required for the proposed project. The required information may include:

- Location of the waterway.

- Type of project; eg., bridge, culvert, utility line placement, erosion control, gravel removal, placer mining, etc.

- a project outline of materials, methods and equipment proposed for use; eg., specifications for construction, design blueprints, type or amount of fill, description of stream at project site, etc.

FIGURE 1 Obtaining An Anadromous Fish Protection Permit



- inwater use of wheeled or tracked vehicle; eg., type and size of vehicle

- description of proposed or anticipated stream diversions, channelization or bank alterations

- removal of material from or deposition in the floodplain

- description of proposed blasting or use of explosives

- the approximate project schedule

- other contractors involved in the project

- mitigation measures

(The procedures for obtaining an Anadromous Fish Protection Permit are summarized in Figure 1.)

USERS' GUIDE

Catalog Format

The Anadromous Waters Catalog is a listing of the anadromous streams by stream number. The Catalog is divided into six volumes (Figure 2) corresponding to the State's six fish and game resource management regions (Arctic, Interior, Western, Southwest, Southcentral and Southeast) recently established by the Joint Boards of Fisheries and Game. There is also a published atlas for each volume which illustrates the documented anadromous fish streams. The figure on the front cover of each Catalog and Atlas shows the geographic area contained within the respective volume. Because of the large size, the volume for the Interior is published in two books.

Maps Used for the Atlas

The State of Alaska is covered by one hundred and fifty-three 1:250,000 scale U.S. Geological Survey quadrangles (Figure 3). The quadrangles have been numbered consecutively to aid the user in locating maps. The quadrangle names and assigned numbers for all regions are shown in Table 1.

Most of the 1:250,000 scale quadrangles are further divided into 1:63,360 scale (also known as quadrangles) inch-to-the-mile maps. These smaller quadrangles are numbered according to convention as shown in Figure 3. Numbering begins at the lower right corner across to the left. The quadrangles on the bottom row are numbered A1, A2, A3, etc. from the right. Quadrangles on the second row are numbered from B1 on the right. This numbering system is consistent for all quadrangles.

Stream Numbering System

All streams, rivers and lakes have a unique identifying number. Waterways are first identified by the five-digit ADF&G statistical fishing district into which the system flows (Figure 4). Each stream

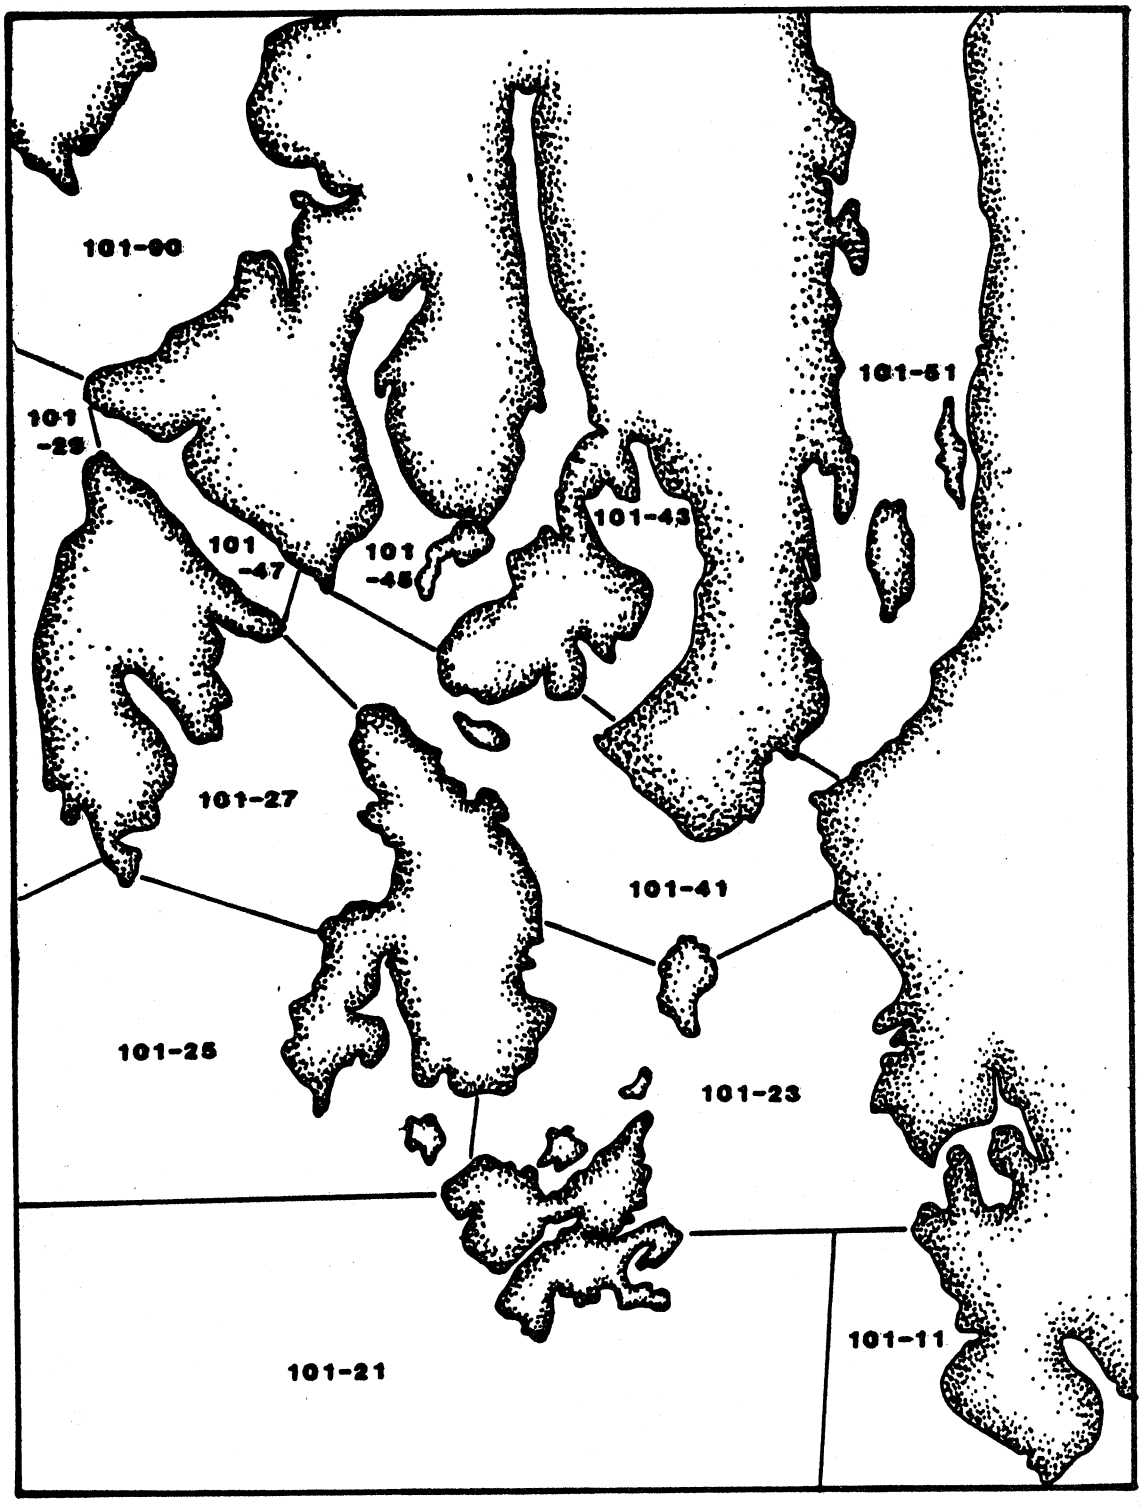

FIGURE 4

Example of ADF&G Statistical Fishing District Numbers

network is numbered from the mouth. As in the example in Figure 5, the five-digit sequence following the fishing district number identifies a specific stream within the district. The number 1 in the left column signifies a first order stream; therefore, Big River is numbered 101-23-10100.

A stream branching from this first order stream (second-order) is identified using the same base number (101-23-10100) plus a four digit number indicating that specific tributary. In the example in Figure 5 this number is 2021 for the tributary on the left. Therefore, the entire number for the example stream is 101-23-10100-2021. Third, fourth and higher order streams are numbered in the same way by adding a four digit number for each branch. The first digit for each branch sequence always indicates the stream order. By definition, the last digit in the number sequence used to identify second and higher order streams is even numbered if the tributary branches to the right (facing upstream) and odd numbered if it branches to the left. Because of space limitations on the maps, only the number sequence identifying a specific tributary is written next to that tributary; however, the entire number sequence down to the Commercial Fishing District number can be determined by following the waterway. The entire number sequence is used in the Catalog.

Lakes are designated by a number sequence with a first digit of 0. In the example shown in Figure 5, the lake occurs along a third order stream. Therefore, the lake number incorporates the third order stream number (101-23-10100-2021-3020) plus the four digit lake identifier (0010).

There are four possible lake-river systems (Figure 6). In the first system, the outlet river is named (in this example, "Big River"). The named river does not continue above the lake. The first order outlet river is numbered with the commercial fishing district number 101-23 and the first order number: 10700. The lake above this first order river retains the base number, 101-23-10700, adding the lake identifier, 0010. All tributaries above the lake retain the base number, adding second

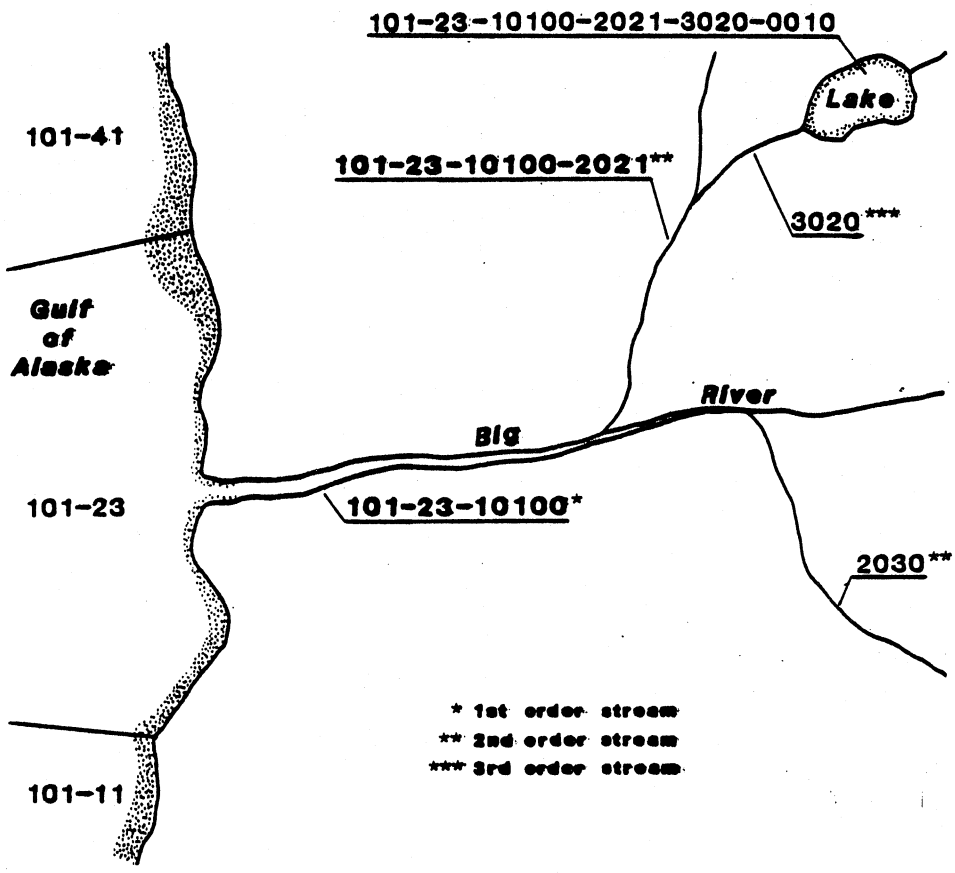

FIGURE 5
Example Of ADF&G Waterway Numbering System

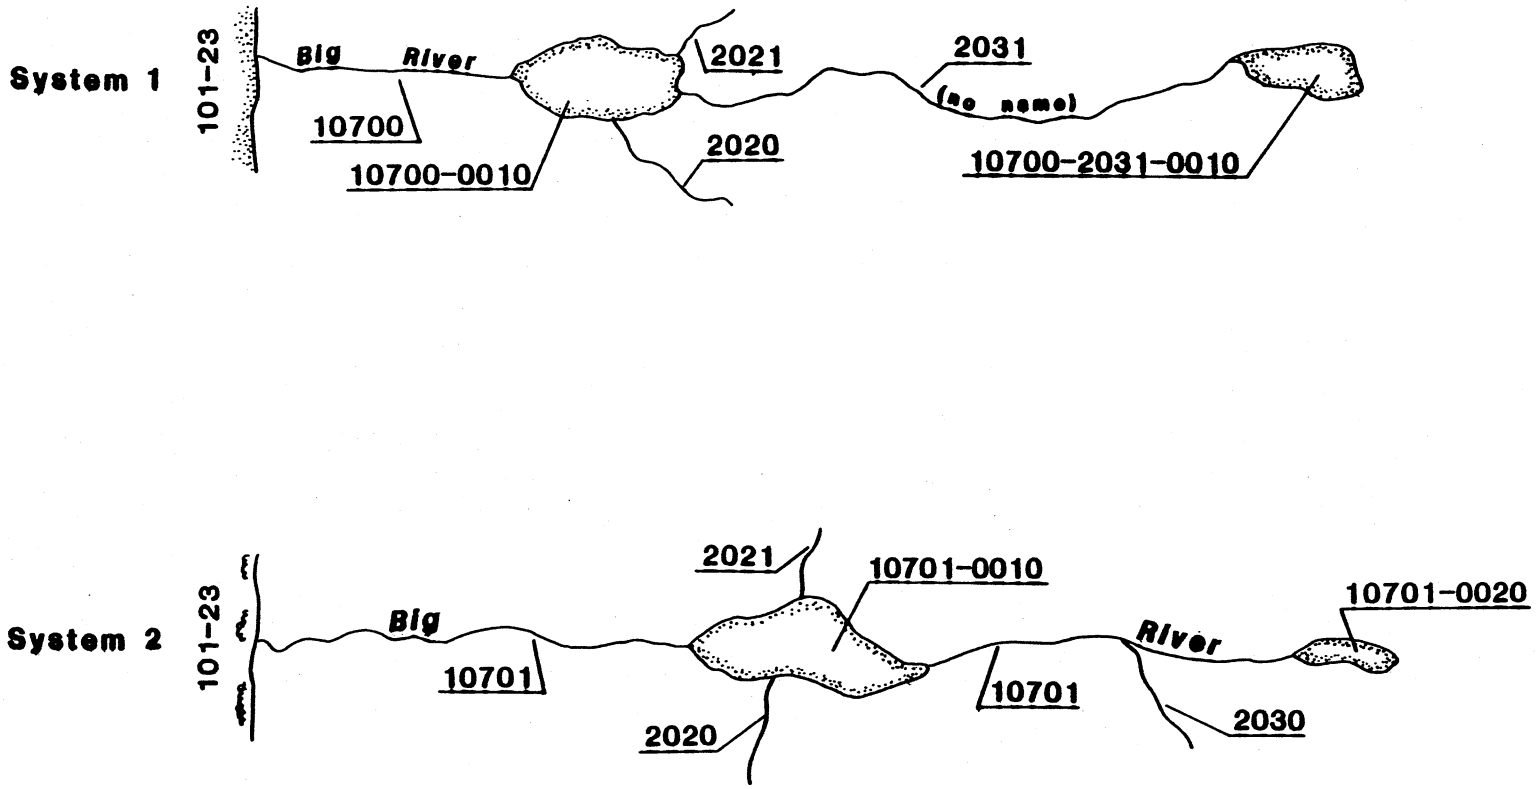

FIGURE 6

Numbering System For Lakes

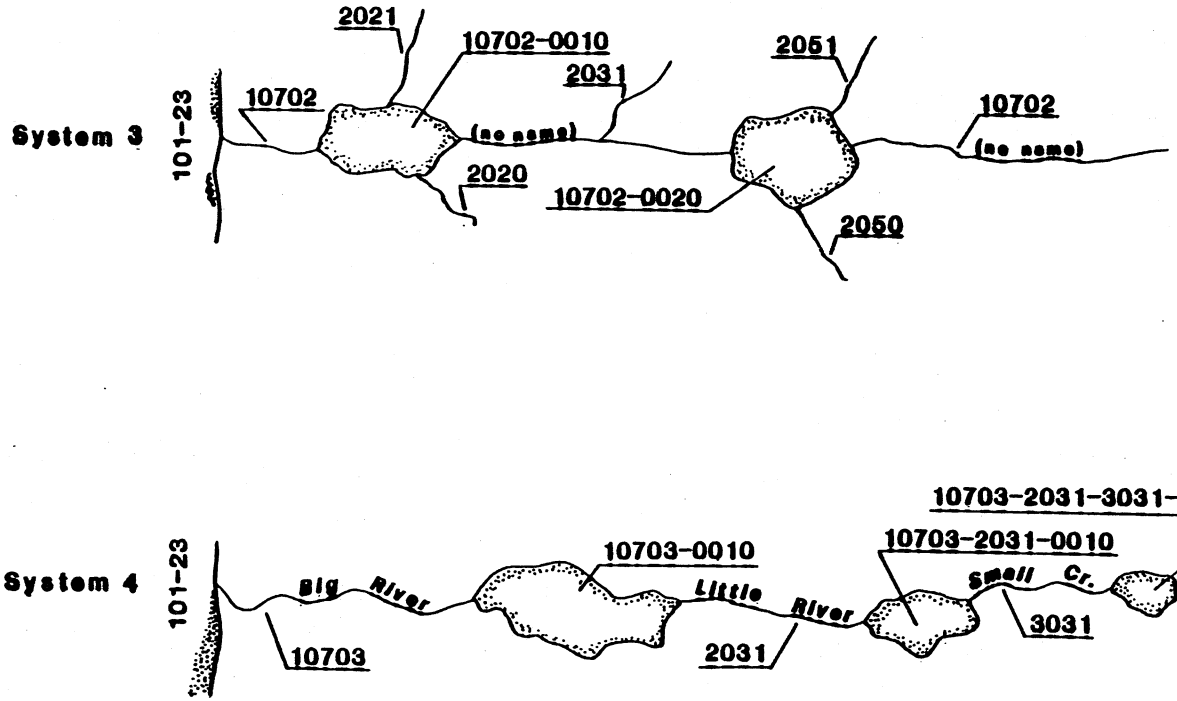

FIGURE 6 (Continued)

Numbering System For Lakes

order identifiers. The lake above the second order tributary has the same number as the secondary tributary, with an added lake number: 101-23-10700-2031-0010.

In the second lake-river system shown in Figure 6, Big River continues through a series of lakes. Therefore each lake is numbered with the tributary number 101-23-10701, and its unique lake number, 0010 for the first lake, 0020 for the second. Tributaries branching from either Big River or the lakes are designated with second order numbers added to the base number.

The river in the third lake-river system is not named, however it has a distinct main channel with tributaries. Therefore, numbering is the same as in the second system: each lake is numbered from the main channel with an added lake number (101-23-10702-0010 for the first lake, 101-23-10702-0020 for the second lake).

In the fourth example presented in Figure 6, Big River, Little River and Small Creek are numbered as first, second and third order tributaries, respectively. The lake above each tributary has the same number as the tributary below with an added lake number. In this example, the first lake (above the first order tributary) is 101-23-10703-0010, the second lake (above the second order tributary) is 101-23-10703-2031-0010, and the third lake (above the third order tributary) is 101-23-10703-2031-3031-0010.

Symbols Used on Maps

The legend on the bottom of each map contains the symbols for each fish species. The number on the lower left corner identifies the 1:63,360 scale quadrangle of the 1:250,000 scale quadrangle. (Numbers for the 1:250,000 scale quadrangles are identified in Table 1).

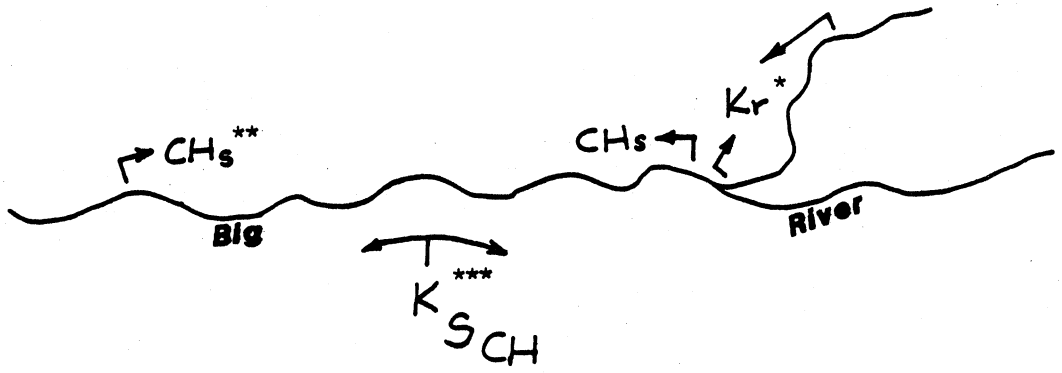
Arrows on the maps delimit the range of the fish (Figure 7). A single arrow at the beginning of the stream shows which fish migrate upstream. Arrows at upper regions indicate the highest point where the fish species are currently known to occur. Double arrows pointing in opposite directions are usually added to clarify information and to indicate that the range of the anadromous fish continues on to adjacent maps.

Sources of Information

Sources of information for this catalog were the ADF&G fishery atlases (1978), ADF&G field notes from each area and regional office, and various ADF&G individual reports. Additional information for Southeast Alaska was obtained from U.S. Forest Service and U.S. Fish and Wildlife Service field notes and the series Revised Anadromous Fish Stream Catalog of Southeastern Alaska (1977) by John Edgington, Robert Larson, Jim Eastwood and Paul Novak. Information from the Arctic-Yukon-Kuskokwim (AYK) Region was supplemented by Bureau of Land Management survey notes, and Index to Northslope Stream and Lake Surveys (1982) by Terry Bendock and John Burr. Data for the Southcentral Region were supplemented by the U.S. Forest Service and the U.S. Fish and Wildlife Service. Many Federal and State agencies and individuals contributed information and verified the anadromous fish data.

Limitations of Data

The inch-to-the-mile maps are used when available for the Anadromous Waters Catalog. Exceptions are in the Arctic and Southwest Regions where some 1:250,000 quadrangles have not yet been subdivided by USGS. Where inch-to-the-mile maps do not exist, anadromous fish streams are drawn on 1:250,000 quadrangles. These maps are folded and included at the end of each volume. The most recent editions of USGS maps were used for the Anadromous Waters Catalog; however, many of these maps have not been revised since the early 1950's.



* Single arrows indicate King Salmon rearing in the tributary only.

** Single arrows along Big River indicate a specific Chum spawning area.

*** Double arrows indicate King, Chum and Sockeye continuing across the map and onto both adjoining maps.

FIGURE 7

Delineation Of The Range Of The Fish Within A Channel

Locations of the stream reaches were described as accurately as possible but inaccuracies in the legal descriptions may occur because channel and coastline configurations have changed since the maps were published. As updated maps become available from USGS, the coordinates of the channels and coastlines in the Catalog which are inaccurate will be changed. In situations where the stream configuration has changed, permits are required for the present waterway, regardless of its actual distance from the mapped or legally described channel.

Virtually all coastal waters in the State provide important habitat for anadromous fish. Small tributaries, flood channels, intermittent streams and beaver ponds are often used for rearing. Because of their small size or ephemeral nature, these systems are often not included on 1:63,360 scale maps. Most surveys are conducted by aircraft for purposes of determining escapement to manage the commercial fisheries. The presence of juvenile fish and the actual upper limit of anadromous fish are not observed during these aerial surveys. Therefore, the upper points of stream reaches recorded on the fishery maps usually reflect the extent of fish surveys in a particular waterway rather than the actual limits to fish occurrence or of habitat use. In addition, only a limited number of the waterways in Alaska have actually been surveyed. It will be many years before ADF&G has surveyed all of the waterways in this vast State.

UPDATE PROCEDURES

The updating procedures of the Anadromous Waters Catalog allow for continuous revisions of the Catalog. Waterways can be added or deleted and the upper range of anadromous waterways changed as more current surveys document the presence or absence of anadromous fish. Proposals for additions or changes to the Catalog can be made by ADF&G personnel, private individuals and other agencies. All proposed changes or additions will be field checked or documented by ADF&G.

Proposals for revisions to the Anadromous Waters Catalog, including inclusion of newly identified anadromous waterways, deletion of waterways determined to not contain anadromous fish or changes to the upper points, should be submitted to:

Alaska Department of Fish and Game
Habitat Division
333 Raspberry Road
Anchorage, Alaska 99502

The waterway should be located on a 1:63,360 scale USGS map (or 1:250,000 scale if 1:63,360 scale is unavailable for the area). The map should show the mouth of the waterway and the upper known extent of the anadromous fish. All other quadrangle maps needed to delineate the specific uses of the proposed waterway should be included. The species using the waterway must be specified and the activities for which the waterway is used (migration, spawning, rearing, or overwintering) should be specified if known.

Changes to the Anadromous Waters Catalog will be made in accordance with the regulation adopting procedures of the Administrative Procedures Act (AS 44.62). It is anticipated that the Catalog will be revised annually, as necessary.

DEFINITIONS

For purposes of this Catalog, the following definitions are set forth:

1. "anadromous fish" means fish which enter fresh water from the sea for spawning purposes. This includes anadromous Dolly Varden, rainbow trout (steelhead), arctic char, sheefish, smelt, lamprey, whitefish, coastal cutthroat trout and salmon;

2. "anadromous fish stream" or "anadromous fish waterway" means a river, lake or stream listed in this Catalog and includes all sloughs and backwaters adjoining the listed waters, and that portion of the streambed which is covered by ordinary high water;

3. "catalog" means Catalog of Waters Important for Spawning, Rearing and Migration of Anadromous Fishes.

4. "lake" means a ponded body of inland water that has a restricted outlet or no outlet, and contains fish;

5. "migration" means the predictable, purposeful or seasonal movement of fish, unrestricted by other than natural influences;

6. "overwintering" means inhabitance by fish of a water body, including its substrate, at any time during October 1 through April 30;

7. "permit" means a habitat protection permit including an anadromous fish protection permit and any amendment or condition issued or approved by the Commissioner or his authorized designee, which has not expired or been suspended, or revoked; a permit constitutes approval of the plans and specifications required by AS 16.05.840, AS 16.05.870, AS 16.20.060, AS 16.20.260 and includes any activity authorized under AS 16.20.120-130;

8. "permittee" means the holder of a permit and includes anyone employed, contracted or assigned by the person to whom the permit was issued to conduct a land or water use operation;

9. "pollution" means causing alteration of a stream, river or lake to the extent that the water fails to meet the water quality standards of the Department of Environmental Conservation set forth in 18 AAC 70.010-110;

10. "portion of the streambed which is covered by ordinary high water" means the stream and the exposed stream bed and banks between the natural vegetation on both banks, except that if the stream is braided, the exposed stream bed and banks are delimited by the natural vegetation bordering the most distant channels;

11. "rearing" means the life phase of a fish from hatching until spawning, or any portion thereof;

12. "regional and area office" means the Alaska Department of Fish and Game, Habitat Division offices located as follows:

Region I

230 South Franklin Street
Room 301
Juneau, Alaska 99801

415 Main Street
Ketchikan, alaska 99901

Post Office Box 499
Sitka, Alaska 99835

Post Office Box 667
Petersburg, Alaska 99833

Region II

333 Raspberry Road
Anchorage, Alaska 99501

Region III

1300 College Road
Fairbanks, Alaska 99701

Pipeline Surveillance Office

1001 Noble Street, Suite 450
Fairbanks, Alaska 99701

13. "spawning" means deposition or fertilization of eggs, including preparation for deposition or fertilization.

INTERPRETATION OF THE CATALOG

Streams and Rivers

Each stream in the Catalog of Waters Important for the Spawning, Rearing or Migration of Anadromous Fish is listed on two lines. The first line contains the stream number and information about the location of the mouth of the stream. The second line lists the stream name (if known) and locates the upper point. Column headings occur at the top of each page. For example, the Salmon River (near Ketchikan) would be listed:

STREAM/LAKE	MAP SHEET	LAT./LONG	LEGAL
101-15-10500	Ketchikan D-1	55 54 30 130 1 39	C 69S100E11
Salmon River	Bradfield Canal A-1	56 1 33 130 4 15	C 67S 99E26

The first line gives:

1. the stream number (101-15-10500);
2. the quadrangle name containing the mouth of the stream (Ketchikan D-1);
3. the latitude-longitude of the mouth of the stream (55 degrees, 54 minutes, 30 seconds latitude, 130 degrees, 4 minutes, 15 seconds longitude);
4. the legal description of the stream mouth, given by meridian (C=Copper River), range (69S), township (100E), and section (11).

The second line gives:

1. the stream name, if known (Salmon River);
2. the quadrangle name containing the stream's upper point, if different from the quadrangle containing the mouth (Bradfield Canal A-1)
3. the latitude-longitude of the upper point;
4. the legal description of the upper point.

Lakes

Lakes are also listed in the Catalog on two lines. For example, Hidden Inlet Lake (in Southeast Alaska) is listed:

STREAM/LAKE	MAP SHEET	LAT./LONG	LEGAL
101-11-11000-0010	Prince Rupert D-2	54 59 15 130 24 1	C 79S100E30
Hidden Inlet Lake			

The first line shows:

1. the lake number (101-11-11000-0010);
2. the quadrangle name on which most or all of the lake occurs (Prince Rupert D-2);
3. the latitude and longitude of the approximate center point of the lake (54 degrees, 59 minutes, 15 seconds latitude and 130 degrees, 24 minutes, 1 second longitude);
4. the legal description of the approximate center of the lake, given by meridian (C= Copper River), range (79S) township (100E) and Section (11).

The second line gives the name of the lake, if known (Hidden Inlet Lake).

Lakes will not have mouths or upper points. Where a lakes occurs on several quadrangle maps, the quadrangle which contains the largest area of the lake will be listed.

The locational information (latitude-longitude and legal description) is taken from the U.S. Geological Survey quadrangle maps. Most of these quadrangles are now out of date, with many streams and portions of coastlines having been displaced. The maps may no longer accurately represent the true geographic location of the stream or lake. However, the locations provided in the Catalog are within the tolerances of the

USGS maps and the intent of the locational information is to avoid any ambiguity in referring to a specific stream or lake. Therefore, locations listed in the Catalog should be compared to the USGS maps and not to field surveyed or photo-extracted locations.

INTRODUCTION

Purpose

The Alaska Department of Fish and Game has the authority to administer AS 16.05.870. The Catalog of Waters Important to the Spawning, Rearing or Migration of Anadromous Fishes (referred to as "Anadromous Waters Catalog") contains a record of the streams, rivers and lakes documented as used by anadromous fish for spawning, rearing and migration. The purpose of the Catalog is to aid in the administration of the statute. Accordingly, the Catalog was revised in 1981 and 1982 by the Alaska Department of Fish and Game in compliance with the 1980 amendment to AS 16.05.870, set out below.

Authority

Implementation of AS 16.05.870 is carried out through the Anadromous Fish Protection Permit which can be obtained from the appropriate ADF&G Regional Habitat Supervisor on a Waterway/Waterbody Use Request Form. The applicant may be required to submit plans for the proposed work, and plans for the protection of fish and game, and the approximate date the construction or use will begin. Refer to section "Anadromous Fish Protection Permit."

Plans for the work are reviewed by Habitat Division personnel and approval given for procedures which have minimal or no harmful effects on fish or game or their habitats. In some cases, work may be restricted to certain seasons to avoid interference with fish or recommendations given for operational methods which would have minimal effect upon spawning and rearing areas. In some instances, damage may be unavoidable and the permit may be withheld.

The Law

> "Sec. 16.05.870. Protection of fish and game. (a) The Commissioner shall, in accordance with the Administrative Procedure Act (AS 44.62) specify the various rivers, lakes, and streams or

parts of them that are important for the spawning, rearing or migration of anadromous fish.

(b) If a person or governmental agency desires to construct a hydraulic project, or use, divert, obstruct, pollute, or change the natural flow or bed of a specified river, lake, or stream, or to use wheeled, tracked, or excavating equipment or log-dragging equipment in the bed of a specified river, lake, or stream, the person or governmental agency shall notify the Commissioner of this intention before the beginning of the construction or use.

(c) The Commissioner shall acknowledge receipt of the notice by return first class mail. If the Commissioner determines to do so, he shall, in the letter of acknowledgement, require the person or governmental agency to submit to him full plans and specifications of the proposed construction or work, complete plans and specifications for the proper protection of fish and game in connection with the construction or work, or in connection with the use, and the approximate date the construction, work, or use will begin. The Commissioner shall approve the proposed construction, work or use in writing unless he finds the plans and specifications insufficient for the proper protection of fish and game. If the Commissioner finds the plans and specifications insufficient for the proper protection of fish and game, he shall notify the person or governmental agency which submitted the plans and specifications of his findings by first class mail. The person or governmental agency may, within 90 days of receipt of the notice, initiate a hearing under AS 44.62.370. The hearing is subject to AS 44.62.330 - 44.62.630."

"Sec. 16.05.880. Violation of Paragraphs 870-895 of this chapter. If a person or governmental agency begins construction on a work or project or use for which notice is required by paragraph 870 of this chapter without first providing plans and specifications subject to the approval of the Commissioner for the proper protection of fish and game, and without first having obtained written approval of the Commissioner as to the adequacy of the plans and specifications submitted for the protection of fish and game, his is guilty of a misdemeanor. If a person or governmental agency is convicted of violating paragraphs 870-895 of this chapter or continues a use, work or project without fully complying with paragraphs 870-895 of this chapter, the use, work, or project is a public nuisance and is subject to abatement. The cost of restoring a specified river, lake, or stream to its original condition shall be borne by the violator and shall be in addition to the penalty imposed by the court."

"Sec. 16.05.890. Emergency situations exempted from paragraph 870 of this chapter. In an emergency arising from weather or stream flow conditions, the Department, through its authorized representatives, shall issue oral permits to a riparian owner for removing obstructions or for repairing existing structures without the necessity of submitting prepared plans and specifications as required by paragraph 870 of this chapter."

"Sec. 16.05.895. Penalty for causing material damage. If a person or governmental agency fails to notify the Commissioner of any construction or use that causes material damage to the spawning beds or prevents or interferes with migration of anadromous fish, the person or governmental agency shall be guilty of a misdemeanor."

"Sec. 16.05.900. Penalty for violations. (a) A person who violates paragraphs 830, 870-895, or 920 of this chapter or any rule or regulation promulgated under this chapter is guilty of a misdemeanor and, upon conviction, is punishable by a fine of not more than $1,000 or by imprisonment for not more than six months, or by both. A person who violates a rule or regulations promulgated under this chapter for the regulation of commercial fisheries shall be punished as provided in paragraph 720 of this chapter.

(b) The court shall transmit the proceeds of all fines to the proper State officer for deposit in the general fund of the State."

ANADROMOUS FISH PROTECTION PERMIT

Anadromous Fish Protection (Title 16) Permits are required "to construct a hydraulic project or use, divert, obstruct, pollute or change the natural flow or bed" of a river, lake or stream contained in the Anadromous Waters Catalog or "to use wheeled, tracked or excavating equipment or log-dragging equipment in the bed" of a river, lake or stream listed in the Catalog. (quoted portions from AS 16.05.870(b)) This includes construction, road crossing, gravel removal and use of vehicles of 5,000 pounds gross weight or heavier in the waterway. Permits may also be required for bank stabilization projects.

A person or agency desiring to use the waterway can obtain information about the permit requirements from the Alaska Permit Information Center (refer to Figure 1). The Permit Information Center will advise the potential user which permits may be required and who to contact. Permits from the Army Corps of Engineers, the Alaska Department of Environmental Conservation, and the Alaska Department of Natural Resources as well as the Alaska Department of Fish and Game may be required for certain activities or work in specific waterways.

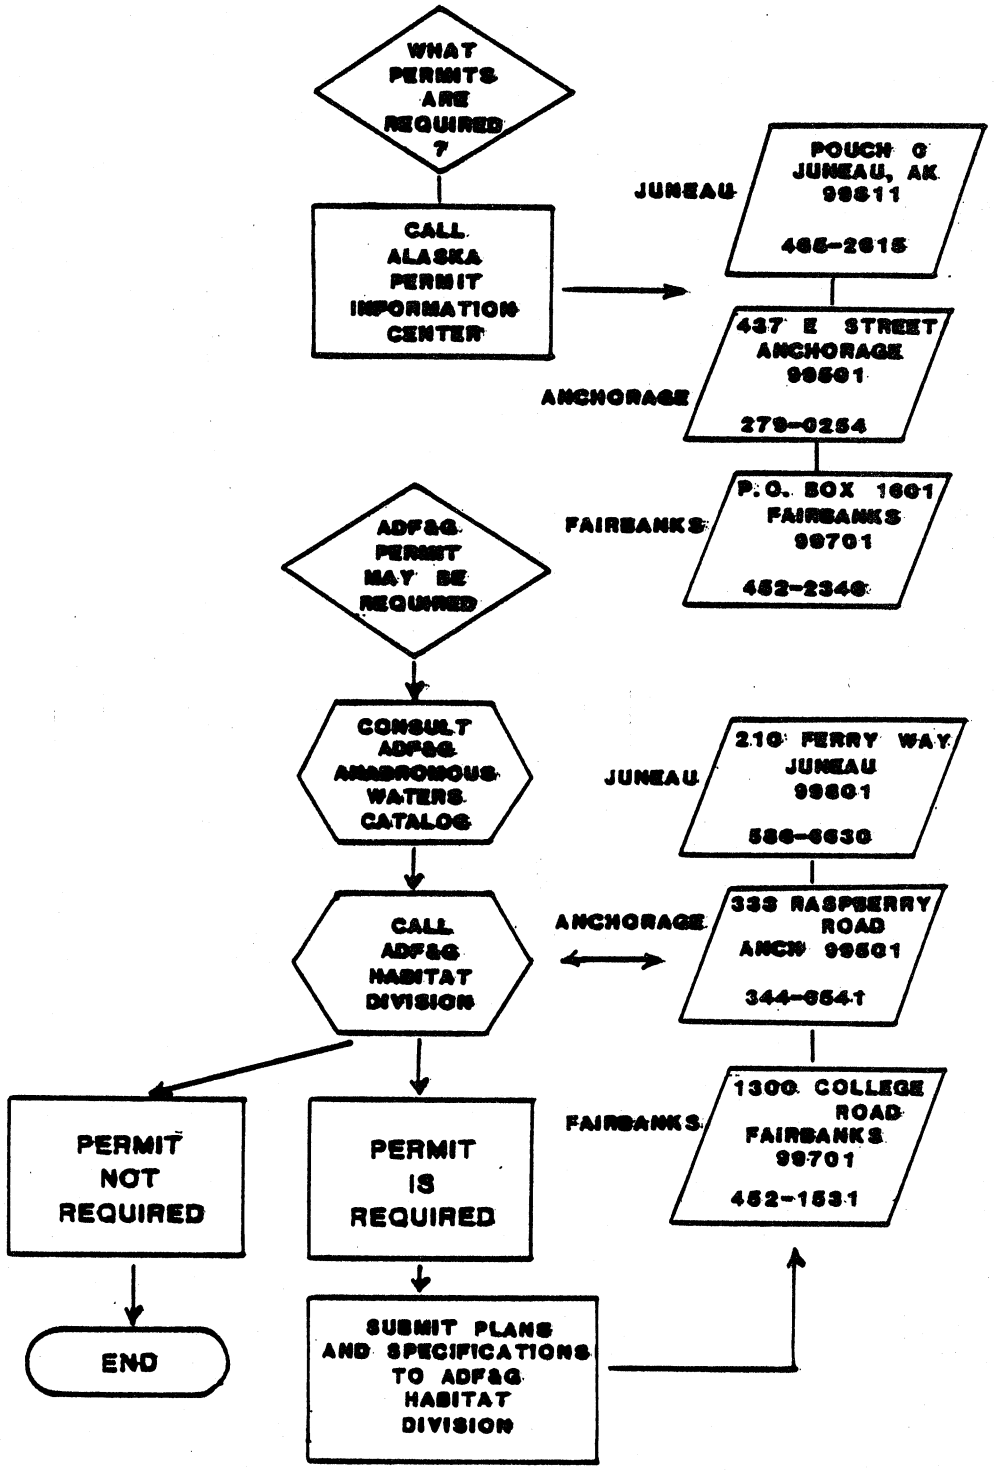
Applications for Title 16 permits from the Department of Fish and Game may be required, as indicated in Figure 1. The Habitat Division will inform the applicant about what information is required for the proposed project. The required information may include:

- Location of the waterway.

- Type of project; eg., bridge, culvert, utility line placement, erosion control, gravel removal, placer mining, etc.

- a project outline of materials, methods and equipment proposed for use; eg., specifications for construction, design blueprints, type or amount of fill, description of stream at project site, etc.

FIGURE 1 Obtaining An Anadromous Fish Protection Permit



- inwater use of wheeled or tracked vehicle; eg., type and size of vehicle

- description of proposed or anticipated stream diversions, channelization or bank alterations

- removal of material from or deposition in the floodplain

- description of proposed blasting or use of explosives

- the approximate project schedule

- other contractors involved in the project

- mitigation measures

(The procedures for obtaining an Anadromous Fish Protection Permit are summarized in Figure 1.)

USERS' GUIDE

Catalog Format

The Anadromous Waters Catalog is a listing of the anadromous streams by stream number. The Catalog is divided into six volumes (Figure 2) corresponding to the State's six fish and game resource management regions (Arctic, Interior, Western, Southwest, Southcentral and Southeast) recently established by the Joint Boards of Fisheries and Game. There is also a published atlas for each volume which illustrates the documented anadromous fish streams. The figure on the front cover of each Catalog and Atlas shows the geographic area contained within the respective volume. Because of the large size, the volume for the Interior is published in two books.

Maps Used for the Atlas

The State of Alaska is covered by one hundred and fifty-three 1:250,000 scale U.S. Geological Survey quadrangles (Figure 3). The quadrangles have been numbered consecutively to aid the user in locating maps. The quadrangle names and assigned numbers for all regions are shown in Table 1.

Most of the 1:250,000 scale quadrangles are further divided into 1:63,360 scale (also known as quadrangles) inch-to-the-mile maps. These smaller quadrangles are numbered according to convention as shown in Figure 3. Numbering begins at the lower right corner across to the left. The quadrangles on the bottom row are numbered A1, A2, A3, etc. from the right. Quadrangles on the second row are numbered from B1 on the right. This numbering system is consistent for all quadrangles.

Stream Numbering System

All streams, rivers and lakes have a unique identifying number. Waterways are first identified by the five-digit ADF&G statistical fishing district into which the system flows (Figure 4). Each stream

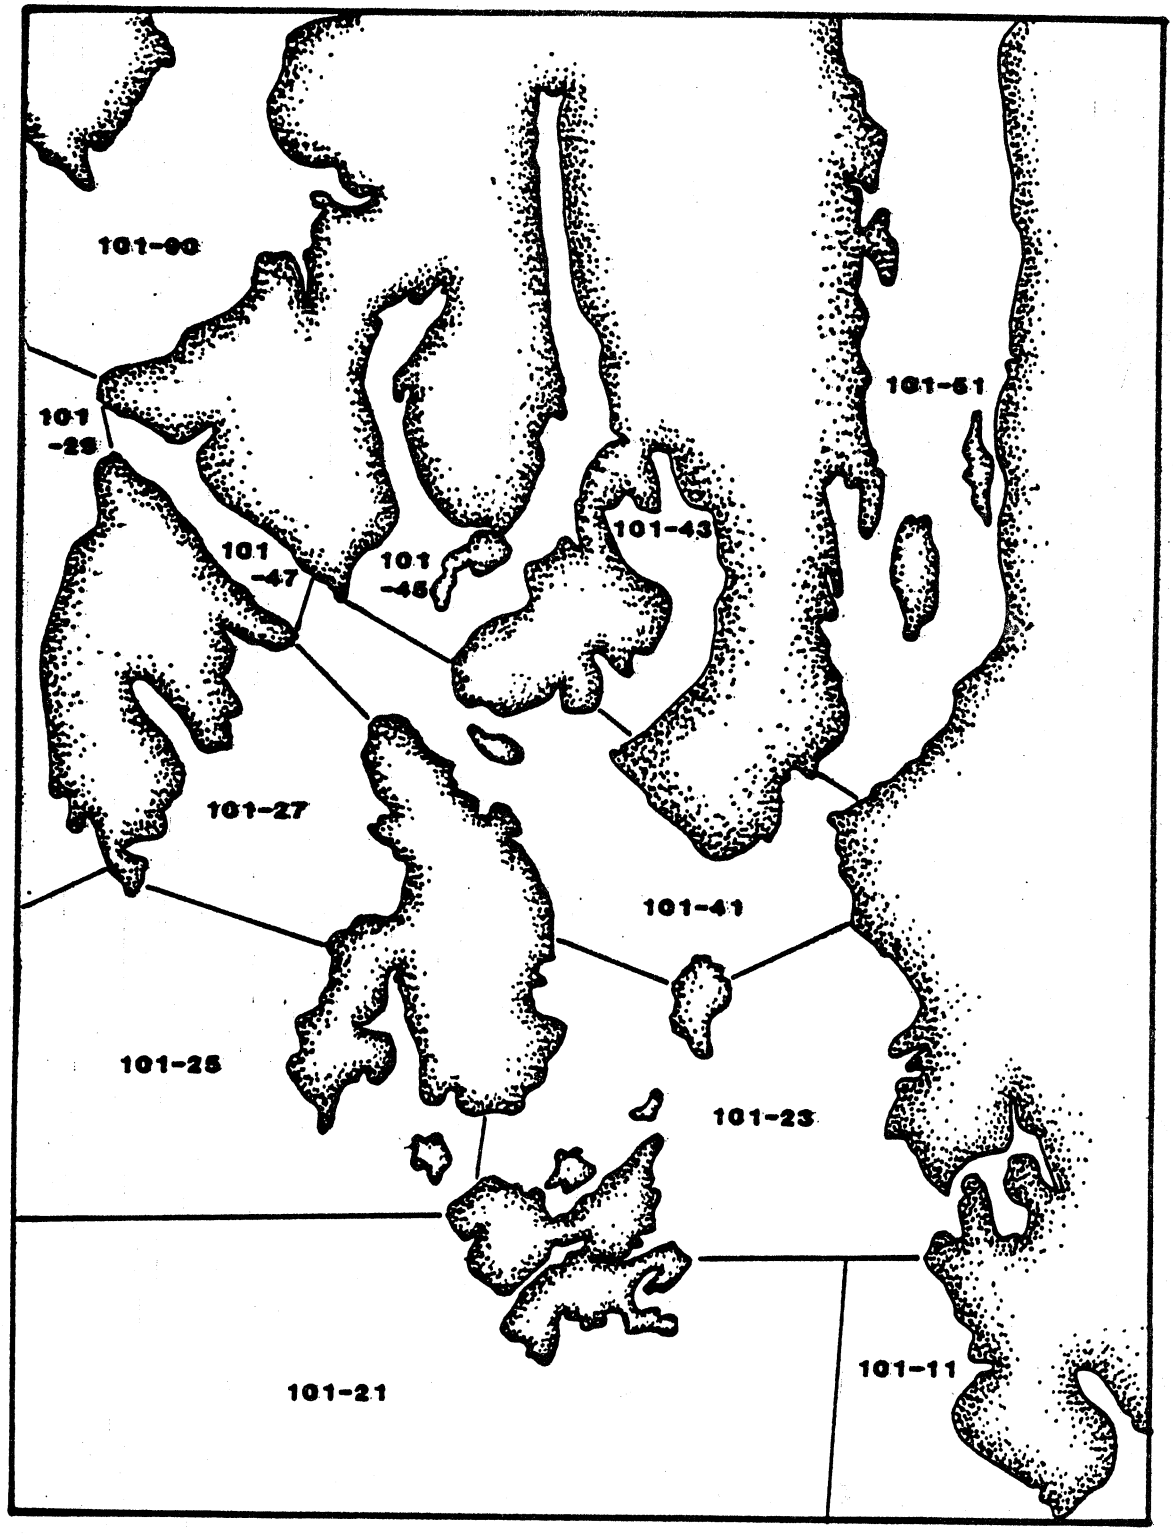

FIGURE 4

Example of ADF&G Statistical Fishing District Numbers

network is numbered from the mouth. As in the example in Figure 5, the five-digit sequence following the fishing district number identifies a specific stream within the district. The number 1 in the left column signifies a first order stream; therefore, Big River is numbered 101-23-10100.

A stream branching from this first order stream (second-order) is identified using the same base number (101-23-10100) plus a four digit number indicating that specific tributary. In the example in Figure 5 this number is 2021 for the tributary on the left. Therefore, the entire number for the example stream is 101-23-10100-2021. Third, fourth and higher order streams are numbered in the same way by adding a four digit number for each branch. The first digit for each branch sequence always indicates the stream order. By definition, the last digit in the number sequence used to identify second and higher order streams is even numbered if the tributary branches to the right (facing upstream) and odd numbered if it branches to the left. Because of space limitations on the maps, only the number sequence identifying a specific tributary is written next to that tributary; however, the entire number sequence down to the Commercial Fishing District number can be determined by following the waterway. The entire number sequence is used in the Catalog.

Lakes are designated by a number sequence with a first digit of 0. In the example shown in Figure 5, the lake occurs along a third order stream. Therefore, the lake number incorporates the third order stream number (101-23-10100-2021-3020) plus the four digit lake identifier (0010).

There are four possible lake-river systems (Figure 6). In the first system, the outlet river is named (in this example, "Big River"). The named river does not continue above the lake. The first order outlet river is numbered with the commercial fishing district number 101-23 and the first order number: 10700. The lake above this first order river retains the base number, 101-23-10700, adding the lake identifier, 0010. All tributaries above the lake retain the base number, adding second

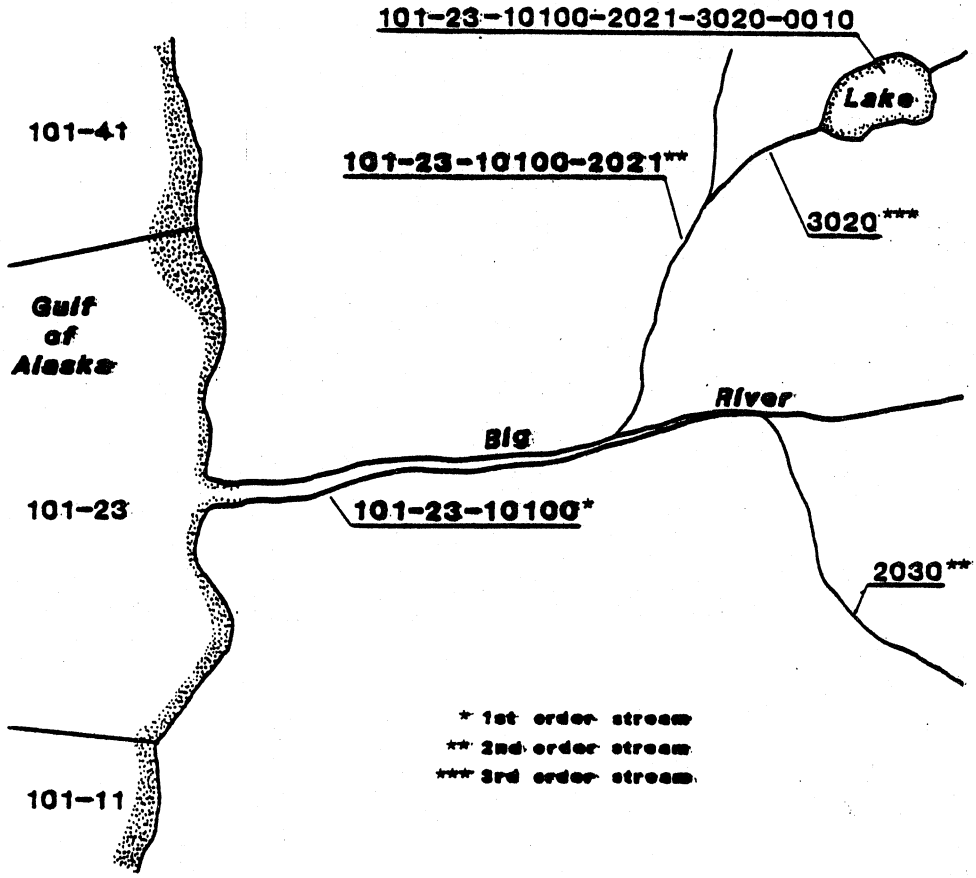

FIGURE 5
Example Of ADF&G Waterway
Numbering System

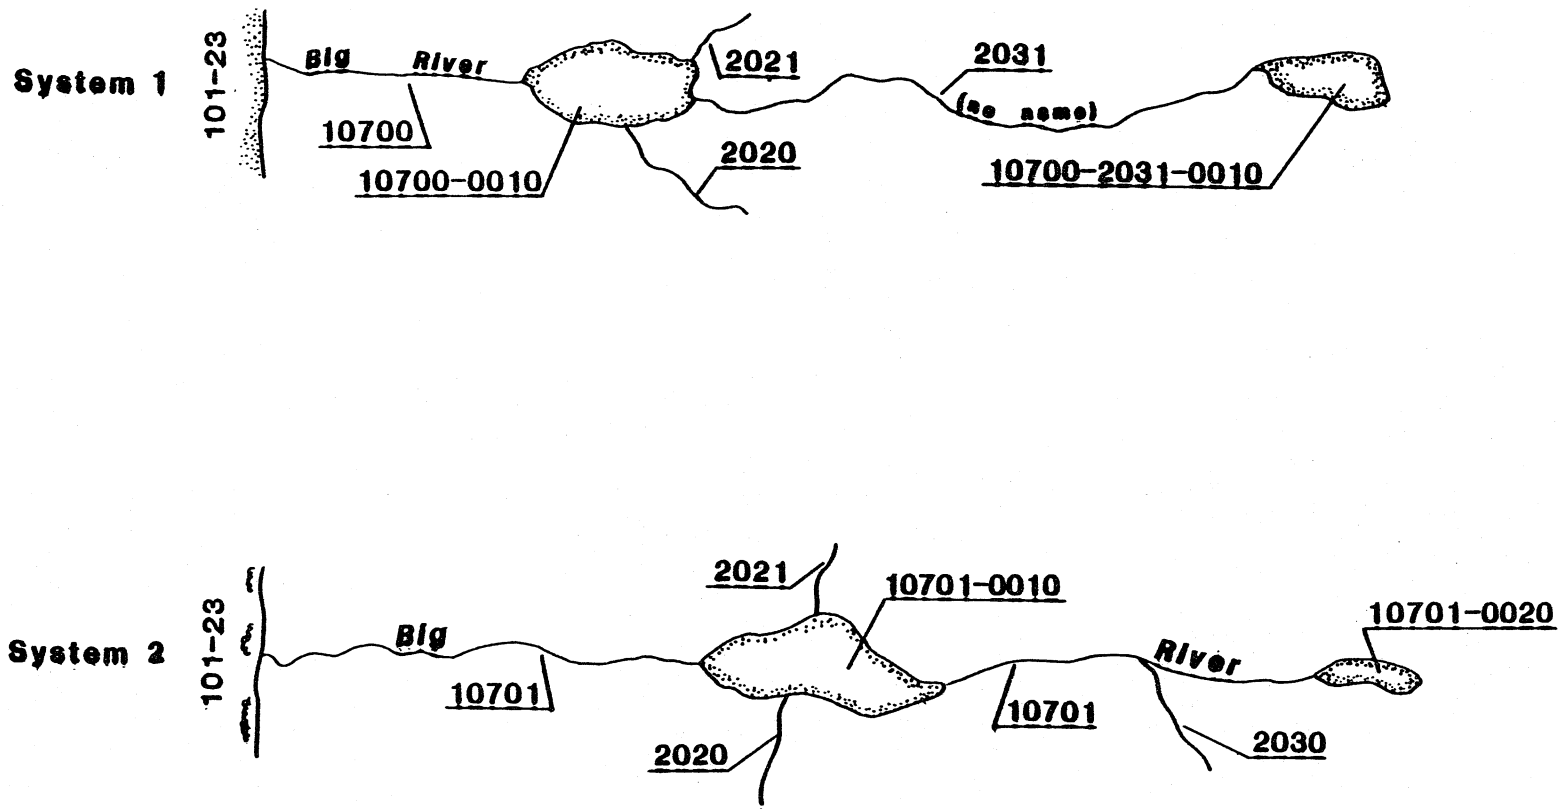

FIGURE 6

Numbering System For Lakes

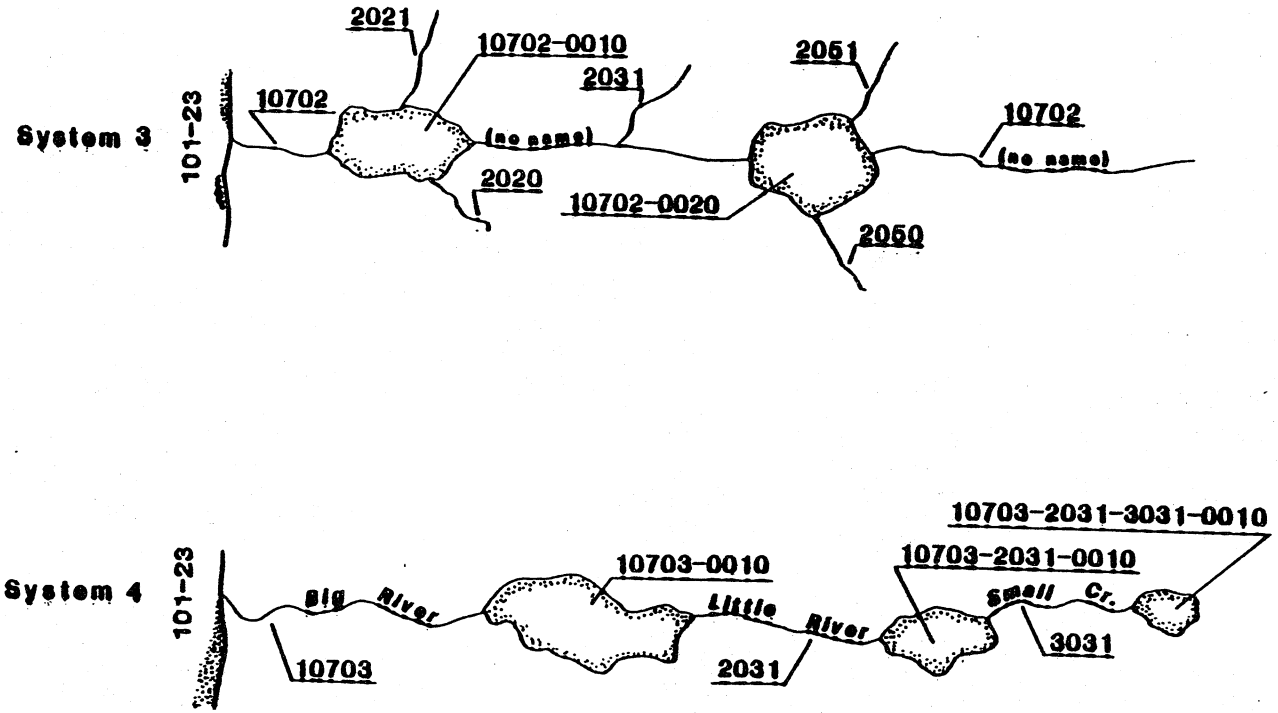

FIGURE 6 (Continued)

Numbering System For Lakes

order identifiers. The lake above the second order tributary has the same number as the secondary tributary, with an added lake number: 101-23-10700-2031-0010.

In the second lake-river system shown in Figure 6, Big River continues through a series of lakes. Therefore each lake is numbered with the tributary number 101-23-10701, and its unique lake number, 0010 for the first lake, 0020 for the second. Tributaries branching from either Big River or the lakes are designated with second order numbers added to the base number.

The river in the third lake-river system is not named, however it has a distinct main channel with tributaries. Therefore, numbering is the same as in the second system: each lake is numbered from the main channel with an added lake number (101-23-10702-0010 for the first lake, 101-23-10702-0020 for the second lake).

In the fourth example presented in Figure 6, Big River, Little River and Small Creek are numbered as first, second and third order tributaries, respectively. The lake above each tributary has the same number as the tributary below with an added lake number. In this example, the first lake (above the first order tributary) is 101-23-10703-0010, the second lake (above the second order tributary) is 101-23-10703-2031-0010, and the third lake (above the third order tributary) is 101-23-10703-2031-3031-0010.

Symbols Used on Maps

The legend on the bottom of each map contains the symbols for each fish species. The number on the lower left corner identifies the 1:63,360 scale quadrangle of the 1:250,000 scale quadrangle. (Numbers for the 1:250,000 scale quadrangles are identified in Table 1).

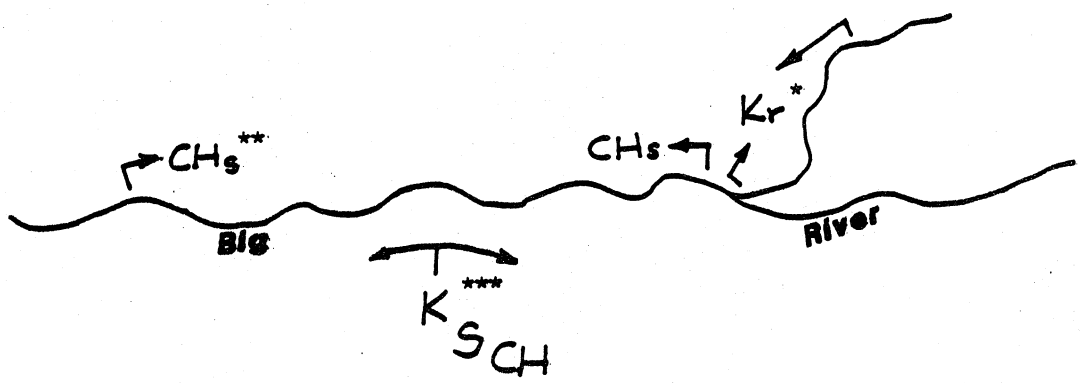
Arrows on the maps delimit the range of the fish (Figure 7). A single arrow at the beginning of the stream shows which fish migrate upstream. Arrows at upper regions indicate the highest point where the fish species are currently known to occur. Double arrows pointing in opposite directions are usually added to clarify information and to indicate that the range of the anadromous fish continues on to adjacent maps.

Sources of Information

Sources of information for this catalog were the ADF&G fishery atlases (1978), ADF&G field notes from each area and regional office, and various ADF&G individual reports. Additional information for Southeast Alaska was obtained from U.S. Forest Service and U.S. Fish and Wildlife Service field notes and the series Revised Anadromous Fish Stream Catalog of Southeastern Alaska (1977) by John Edgington, Robert Larson, Jim Eastwood and Paul Novak. Information from the Arctic-Yukon-Kuskokwim (AYK) Region was supplemented by Bureau of Land Management survey notes, and Index to Northslope Stream and Lake Surveys (1982) by Terry Bendock and John Burr. Data for the Southcentral Region were supplemented by the U.S. Forest Service and the U.S. Fish and Wildlife Service. Many Federal and State agencies and individuals contributed information and verified the anadromous fish data.

Limitations of Data

The inch-to-the-mile maps are used when available for the Anadromous Waters Catalog. Exceptions are in the Arctic and Southwest Regions where some 1:250,000 quadrangles have not yet been subdivided by USGS. Where inch-to-the-mile maps do not exist, anadromous fish streams are drawn on 1:250,000 quadrangles. These maps are folded and included at the end of each volume. The most recent editions of USGS maps were used for the Anadromous Waters Catalog; however, many of these maps have not been revised since the early 1950's.



* Single arrows indicate King Salmon rearing in the tributary only.

** Single arrows along Big River indicate a specific Chum spawning area.

*** Double arrows indicate King, Chum and Sockeye continuing across the map and onto both adjoining maps.

FIGURE 7

Delineation Of The Range Of The Fish Within A Channel

Locations of the stream reaches were described as accurately as possible but inaccuracies in the legal descriptions may occur because channel and coastline configurations have changed since the maps were published. As updated maps become available from USGS, the coordinates of the channels and coastlines in the Catalog which are inaccurate will be changed. In situations where the stream configuration has changed, permits are required for the present waterway, regardless of its actual distance from the mapped or legally described channel.

Virtually all coastal waters in the State provide important habitat for anadromous fish. Small tributaries, flood channels, intermittent streams and beaver ponds are often used for rearing. Because of their small size or ephemeral nature, these systems are often not included on 1:63,360 scale maps. Most surveys are conducted by aircraft for purposes of determining escapement to manage the commercial fisheries. The presence of juvenile fish and the actual upper limit of anadromous fish are not observed during these aerial surveys. Therefore, the upper points of stream reaches recorded on the fishery maps usually reflect the extent of fish surveys in a particular waterway rather than the actual limits to fish occurrence or of habitat use. In addition, only a limited number of the waterways in Alaska have actually been surveyed. It will be many years before ADF&G has surveyed all of the waterways in this vast State.

UPDATE PROCEDURES

The updating procedures of the Anadromous Waters Catalog allow for continuous revisions of the Catalog. Waterways can be added or deleted and the upper range of anadromous waterways changed as more current surveys document the presence or absence of anadromous fish. Proposals for additions or changes to the Catalog can be made by ADF&G personnel, private individuals and other agencies. All proposed changes or additions will be field checked or documented by ADF&G.

Proposals for revisions to the Anadromous Waters Catalog, including inclusion of newly identified anadromous waterways, deletion of waterways determined to not contain anadromous fish or changes to the upper points, should be submitted to:

Alaska Department of Fish and Game
Habitat Division
333 Raspberry Road
Anchorage, Alaska 99502

The waterway should be located on a 1:63,360 scale USGS map (or 1:250,000 scale if 1:63,360 scale is unavailable for the area). The map should show the mouth of the waterway and the upper known extent of the anadromous fish. All other quadrangle maps needed to delineate the specific uses of the proposed waterway should be included. The species using the waterway must be specified and the activities for which the waterway is used (migration, spawning, rearing, or overwintering) should be specified if known.

Changes to the Anadromous Waters Catalog will be made in accordance with the regulation adopting procedures of the Administrative Procedures Act (AS 44.62). It is anticipated that the Catalog will be revised annually, as necessary.

DEFINITIONS

For purposes of this Catalog, the following definitions are set forth:

1. "anadromous fish" means fish which enter fresh water from the sea for spawning purposes. This includes anadromous Dolly Varden, rainbow trout (steelhead), arctic char, sheefish, smelt, lamprey, whitefish, coastal cutthroat trout and salmon;

2. "anadromous fish stream" or "anadromous fish waterway" means a river, lake or stream listed in this Catalog and includes all sloughs and backwaters adjoining the listed waters, and that portion of the streambed which is covered by ordinary high water;

3. "catalog" means Catalog of Waters Important for Spawning, Rearing and Migration of Anadromous Fishes.

4. "lake" means a ponded body of inland water that has a restricted outlet or no outlet, and contains fish;

5. "migration" means the predictable, purposeful or seasonal movement of fish, unrestricted by other than natural influences;

6. "overwintering" means inhabitance by fish of a water body, including its substrate, at any time during October 1 through April 30;

7. "permit" means a habitat protection permit including an anadromous fish protection permit and any amendment or condition issued or approved by the Commissioner or his authorized designee, which has not expired or been suspended, or revoked; a permit constitutes approval of the plans and specifications required by AS 16.05.840, AS 16.05.870, AS 16.20.060, AS 16.20.260 and includes any activity authorized under AS 16.20.120-130;

8. "permittee" means the holder of a permit and includes anyone employed, contracted or assigned by the person to whom the permit was issued to conduct a land or water use operation;

9. "pollution" means causing alteration of a stream, river or lake to the extent that the water fails to meet the water quality standards of the Department of Environmental Conservation set forth in 18 AAC 70.010-110;

10. "portion of the streambed which is covered by ordinary high water" means the stream and the exposed stream bed and banks between the natural vegetation on both banks, except that if the stream is braided, the exposed stream bed and banks are delimited by the natural vegetation bordering the most distant channels;

11. "rearing" means the life phase of a fish from hatching until spawning, or any portion thereof;

12. "regional and area office" means the Alaska Department of Fish and Game, Habitat Division offices located as follows:

Region I

230 South Franklin Street
Room 301
Juneau, Alaska 99801

415 Main Street
Ketchikan, alaska 99901

Post Office Box 499
Sitka, Alaska 99835

Post Office Box 667
Petersburg, Alaska 99833

Region II

333 Raspberry Road
Anchorage, Alaska 99501

Region III

1300 College Road
Fairbanks, Alaska 99701

Pipeline Surveillance Office

1001 Noble Street, Suite 450
Fairbanks, Alaska 99701

13. "spawning" means deposition or fertilization of eggs, including preparation for deposition or fertilization.

INTERPRETATION OF THE CATALOG

Streams and Rivers

Each stream in the Catalog of Waters Important for the Spawning, Rearing or Migration of Anadromous Fish is listed on two lines. The first line contains the stream number and information about the location of the mouth of the stream. The second line lists the stream name (if known) and locates the upper point. Column headings occur at the top of each page. For example, the Salmon River (near Ketchikan) would be listed:

STREAM/LAKE	MAP SHEET	LAT./LONG	LEGAL
101-15-10500	Ketchikan D-1	55 54 30 130 1 39	C 69S100E11
Salmon River	Bradfield Canal A-1	56 1 33 130 4 15	C 67S 99E26

The first line gives:

1. the stream number (101-15-10500);
2. the quadrangle name containing the mouth of the stream (Ketchikan D-1);
3. the latitude-longitude of the mouth of the stream (55 degrees, 54 minutes, 30 seconds latitude, 130 degrees, 4 minutes, 15 seconds longitude);
4. the legal description of the stream mouth, given by meridian (C=Copper River), range (69S), township (100E), and section (11).

The second line gives:

1. the stream name, if known (Salmon River);
2. the quadrangle name containing the stream's upper point, if different from the quadrangle containing the mouth (Bradfield Canal A-1)
3. the latitude-longitude of the upper point;
4. the legal description of the upper point.

Lakes

Lakes are also listed in the Catalog on two lines. For example, Hidden Inlet Lake (in Southeast Alaska) is listed:

STREAM/LAKE	MAP SHEET	LAT./LONG	LEGAL
101-11-11000-0010	Prince Rupert D-2	54 59 15 130 24 1	C 79S100E30
Hidden Inlet Lake			

The first line shows:

1. the lake number (101-11-11000-0010);
2. the quadrangle name on which most or all of the lake occurs (Prince Rupert D-2);
3. the latitude and longitude of the approximate center point of the lake (54 degrees, 59 minutes, 15 seconds latitude and 130 degrees, 24 minutes, 1 second longitude);
4. the legal description of the approximate center of the lake, given by meridian (C= Copper River), range (79S) township (100E) and Section (11).

The second line gives the name of the lake, if known (Hidden Inlet Lake).

Lakes will not have mouths or upper points. Where a lakes occurs on several quadrangle maps, the quadrangle which contains the largest area of the lake will be listed.

The locational information (latitude-longitude and legal description) is taken from the U.S. Geological Survey quadrangle maps. Most of these quadrangles are now out of date, with many streams and portions of coastlines having been displaced. The maps may no longer accurately represent the true geographic location of the stream or lake. However, the locations provided in the Catalog are within the tolerances of the

USGS maps and the intent of the locational information is to avoid any ambiguity in referring to a specific stream or lake. Therefore, locations listed in the Catalog should be compared to the USGS maps and not to field surveyed or photo-extracted locations.

INTRODUCTION

Purpose

The Alaska Department of Fish and Game has the authority to administer AS 16.05.870. The Catalog of Waters Important to the Spawning, Rearing or Migration of Anadromous Fishes (referred to as "Anadromous Waters Catalog") contains a record of the streams, rivers and lakes documented as used by anadromous fish for spawning, rearing and migration. The purpose of the Catalog is to aid in the administration of the statute. Accordingly, the Catalog was revised in 1981 and 1982 by the Alaska Department of Fish and Game in compliance with the 1980 amendment to AS 16.05.870, set out below.

Authority

Implementation of AS 16.05.870 is carried out through the Anadromous Fish Protection Permit which can be obtained from the appropriate ADF&G Regional Habitat Supervisor on a Waterway/Waterbody Use Request Form. The applicant may be required to submit plans for the proposed work, and plans for the protection of fish and game, and the approximate date the construction or use will begin. Refer to section "Anadromous Fish Protection Permit."

Plans for the work are reviewed by Habitat Division personnel and approval given for procedures which have minimal or no harmful effects on fish or game or their habitats. In some cases, work may be restricted to certain seasons to avoid interference with fish or recommendations given for operational methods which would have minimal effect upon spawning and rearing areas. In some instances, damage may be unavoidable and the permit may be withheld.

The Law

> "Sec. 16.05.870. Protection of fish and game. (a) The Commissioner shall, in accordance with the Administrative Procedure Act (AS 44.62) specify the various rivers, lakes, and streams or

parts of them that are important for the spawning, rearing or migration of anadromous fish.

(b) If a person or governmental agency desires to construct a hydraulic project, or use, divert, obstruct, pollute, or change the natural flow or bed of a specified river, lake, or stream, or to use wheeled, tracked, or excavating equipment or log-dragging equipment in the bed of a specified river, lake, or stream, the person or governmental agency shall notify the Commissioner of this intention before the beginning of the construction or use.

(c) The Commissioner shall acknowledge receipt of the notice by return first class mail. If the Commissioner determines to do so, he shall, in the letter of acknowledgement, require the person or governmental agency to submit to him full plans and specifications of the proposed construction or work, complete plans and specifications for the proper protection of fish and game in connection with the construction or work, or in connection with the use, and the approximate date the construction, work, or use will begin. The Commissioner shall approve the proposed construction, work or use in writing unless he finds the plans and specifications insufficient for the proper protection of fish and game. If the Commissioner finds the plans and specifications insufficient for the proper protection of fish and game, he shall notify the person or governmental agency which submitted the plans and specifications of his findings by first class mail. The person or governmental agency may, within 90 days of receipt of the notice, initiate a hearing under AS 44.62.370. The hearing is subject to AS 44.62.330 - 44.62.630."

"Sec. 16.05.880. Violation of Paragraphs 870-895 of this chapter. If a person or governmental agency begins construction on a work or project or use for which notice is required by paragraph 870 of this chapter without first providing plans and specifications subject to the approval of the Commissioner for the proper protection of fish and game, and without first having obtained written approval of the Commissioner as to the adequacy of the plans and specifications submitted for the protection of fish and game, his is guilty of a misdemeanor. If a person or governmental agency is convicted of violating paragraphs 870-895 of this chapter or continues a use, work or project without fully complying with paragraphs 870-895 of this chapter, the use, work, or project is a public nuisance and is subject to abatement. The cost of restoring a specified river, lake, or stream to its original condition shall be borne by the violator and shall be in addition to the penalty imposed by the court."

"Sec. 16.05.890. Emergency situations exempted from paragraph 870 of this chapter. In an emergency arising from weather or stream flow conditions, the Department, through its authorized representatives, shall issue oral permits to a riparian owner for removing obstructions or for repairing existing structures without the necessity of submitting prepared plans and specifications as required by paragraph 870 of this chapter."

"Sec. 16.05.895. Penalty for causing material damage. If a person or governmental agency fails to notify the Commissioner of any construction or use that causes material damage to the spawning beds or prevents or interferes with migration of anadromous fish, the person or governmental agency shall be guilty of a misdemeanor."

"Sec. 16.05.900. Penalty for violations. (a) A person who violates paragraphs 830, 870-895, or 920 of this chapter or any rule or regulation promulgated under this chapter is guilty of a misdemeanor and, upon conviction, is punishable by a fine of not more than $1,000 or by imprisonment for not more than six months, or by both. A person who violates a rule or regulations promulgated under this chapter for the regulation of commercial fisheries shall be punished as provided in paragraph 720 of this chapter.

(b) The court shall transmit the proceeds of all fines to the proper State officer for deposit in the general fund of the State."

ANADROMOUS FISH PROTECTION PERMIT

Anadromous Fish Protection (Title 16) Permits are required "to construct a hydraulic project or use, divert, obstruct, pollute or change the natural flow or bed" of a river, lake or stream contained in the Anadromous Waters Catalog or "to use wheeled, tracked or excavating equipment or log-dragging equipment in the bed" of a river, lake or stream listed in the Catalog. (quoted portions from AS 16.05.870(b)) This includes construction, road crossing, gravel removal and use of vehicles of 5,000 pounds gross weight or heavier in the waterway. Permits may also be required for bank stabilization projects.

A person or agency desiring to use the waterway can obtain information about the permit requirements from the Alaska Permit Information Center (refer to Figure 1). The Permit Information Center will advise the potential user which permits may be required and who to contact. Permits from the Army Corps of Engineers, the Alaska Department of Environmental Conservation, and the Alaska Department of Natural Resources as well as the Alaska Department of Fish and Game may be required for certain activities or work in specific waterways.

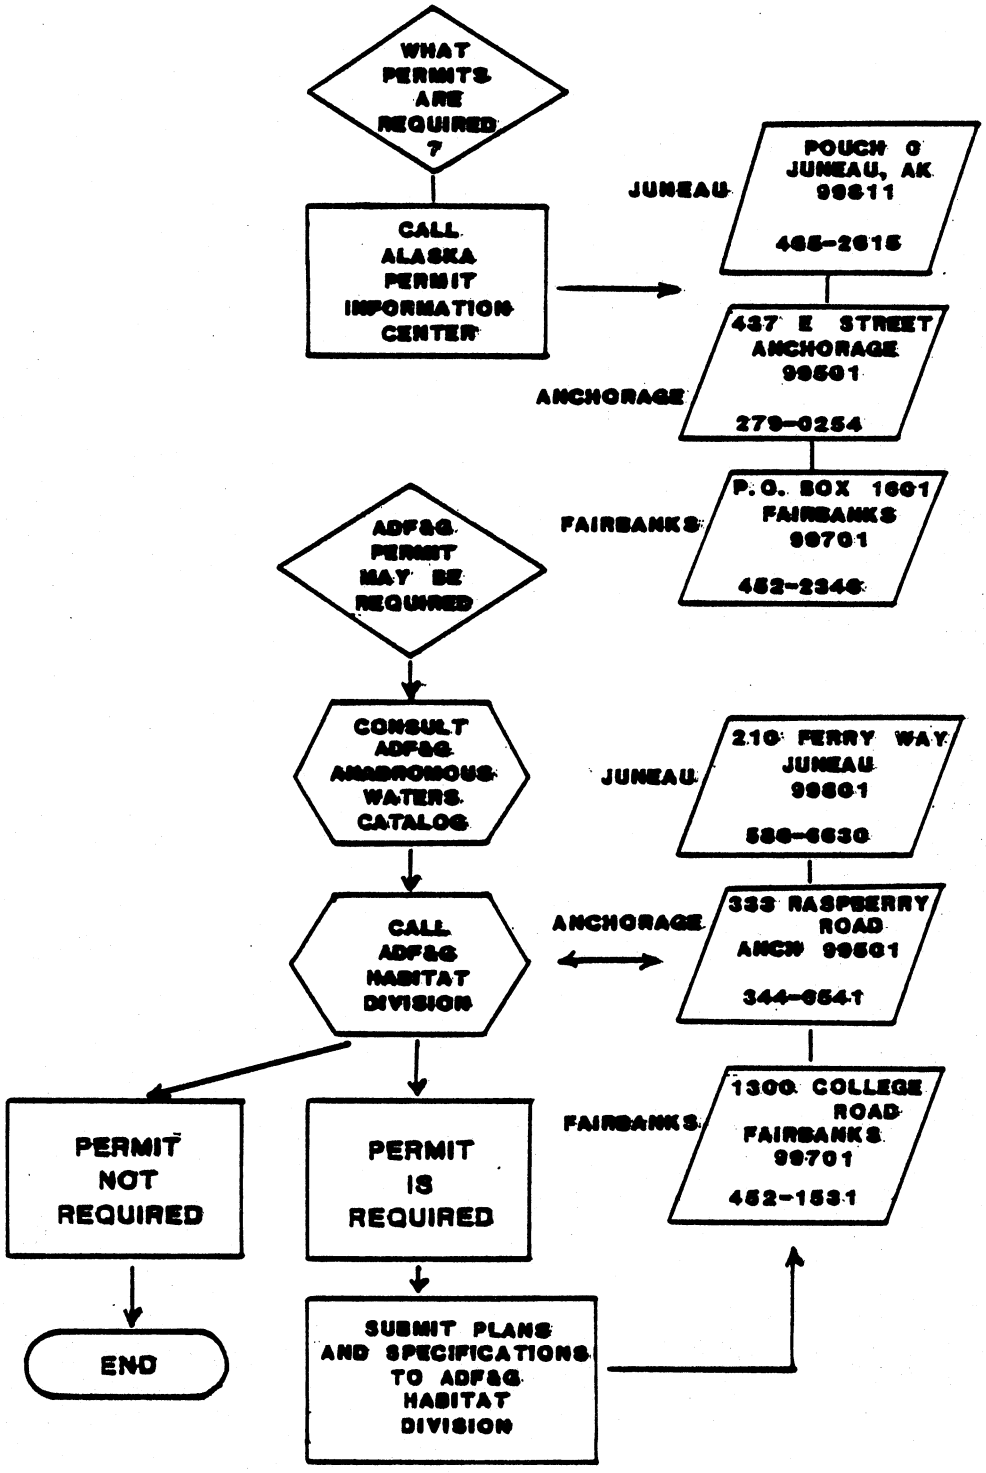
Applications for Title 16 permits from the Department of Fish and Game may be required, as indicated in Figure 1. The Habitat Division will inform the applicant about what information is required for the proposed project. The required information may include:

- Location of the waterway.

- Type of project; eg., bridge, culvert, utility line placement, erosion control, gravel removal, placer mining, etc.

- a project outline of materials, methods and equipment proposed for use; eg., specifications for construction, design blueprints, type or amount of fill, description of stream at project site, etc.

FIGURE 1 Obtaining An Anadromous Fish Protection Permit



- inwater use of wheeled or tracked vehicle; eg., type and size of vehicle

- description of proposed or anticipated stream diversions, channelization or bank alterations

- removal of material from or deposition in the floodplain

- description of proposed blasting or use of explosives

- the approximate project schedule

- other contractors involved in the project

- mitigation measures

(The procedures for obtaining an Anadromous Fish Protection Permit are summarized in Figure 1.)

USERS' GUIDE

Catalog Format

The Anadromous Waters Catalog is a listing of the anadromous streams by stream number. The Catalog is divided into six volumes (Figure 2) corresponding to the State's six fish and game resource management regions (Arctic, Interior, Western, Southwest, Southcentral and Southeast) recently established by the Joint Boards of Fisheries and Game. There is also a published atlas for each volume which illustrates the documented anadromous fish streams. The figure on the front cover of each Catalog and Atlas shows the geographic area contained within the respective volume. Because of the large size, the volume for the Interior is published in two books.

Maps Used for the Atlas

The State of Alaska is covered by one hundred and fifty-three 1:250,000 scale U.S. Geological Survey quadrangles (Figure 3). The quadrangles have been numbered consecutively to aid the user in locating maps. The quadrangle names and assigned numbers for all regions are shown in Table 1.

Most of the 1:250,000 scale quadrangles are further divided into 1:63,360 scale (also known as quadrangles) inch-to-the-mile maps. These smaller quadrangles are numbered according to convention as shown in Figure 3. Numbering begins at the lower right corner across to the left. The quadrangles on the bottom row are numbered A1, A2, A3, etc. from the right. Quadrangles on the second row are numbered from B1 on the right. This numbering system is consistent for all quadrangles.

Stream Numbering System

All streams, rivers and lakes have a unique identifying number. Waterways are first identified by the five-digit ADF&G statistical fishing district into which the system flows (Figure 4). Each stream

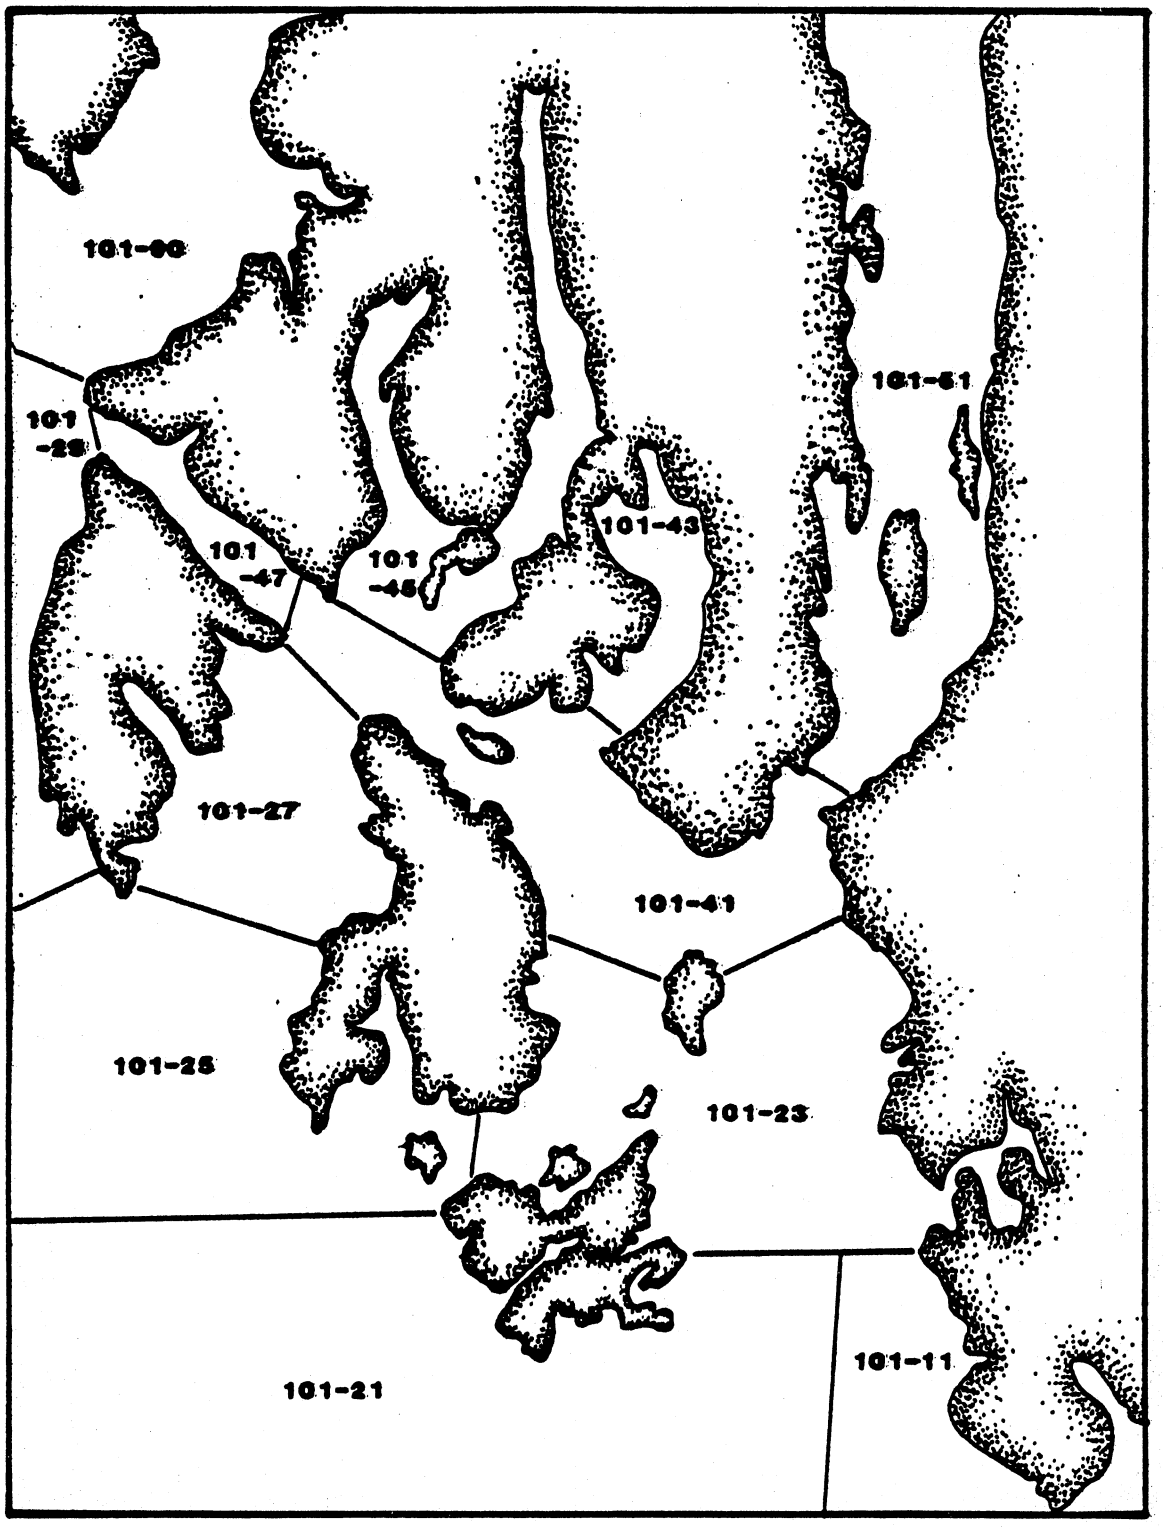

FIGURE 4

Example of ADF&G Statistical Fishing District Numbers

network is numbered from the mouth. As in the example in Figure 5, the five-digit sequence following the fishing district number identifies a specific stream within the district. The number 1 in the left column signifies a first order stream; therefore, Big River is numbered 101-23-10100.

A stream branching from this first order stream (second-order) is identified using the same base number (101-23-10100) plus a four digit number indicating that specific tributary. In the example in Figure 5 this number is 2021 for the tributary on the left. Therefore, the entire number for the example stream is 101-23-10100-2021. Third, fourth and higher order streams are numbered in the same way by adding a four digit number for each branch. The first digit for each branch sequence always indicates the stream order. By definition, the last digit in the number sequence used to identify second and higher order streams is even numbered if the tributary branches to the right (facing upstream) and odd numbered if it branches to the left. Because of space limitations on the maps, only the number sequence identifying a specific tributary is written next to that tributary; however, the entire number sequence down to the Commercial Fishing District number can be determined by following the waterway. The entire number sequence is used in the Catalog.

Lakes are designated by a number sequence with a first digit of 0. In the example shown in Figure 5, the lake occurs along a third order stream. Therefore, the lake number incorporates the third order stream number (101-23-10100-2021-3020) plus the four digit lake identifier (0010).

There are four possible lake-river systems (Figure 6). In the first system, the outlet river is named (in this example, "Big River"). The named river does not continue above the lake. The first order outlet river is numbered with the commercial fishing district number 101-23 and the first order number: 10700. The lake above this first order river retains the base number, 101-23-10700, adding the lake identifier, 0010. All tributaries above the lake retain the base number, adding second

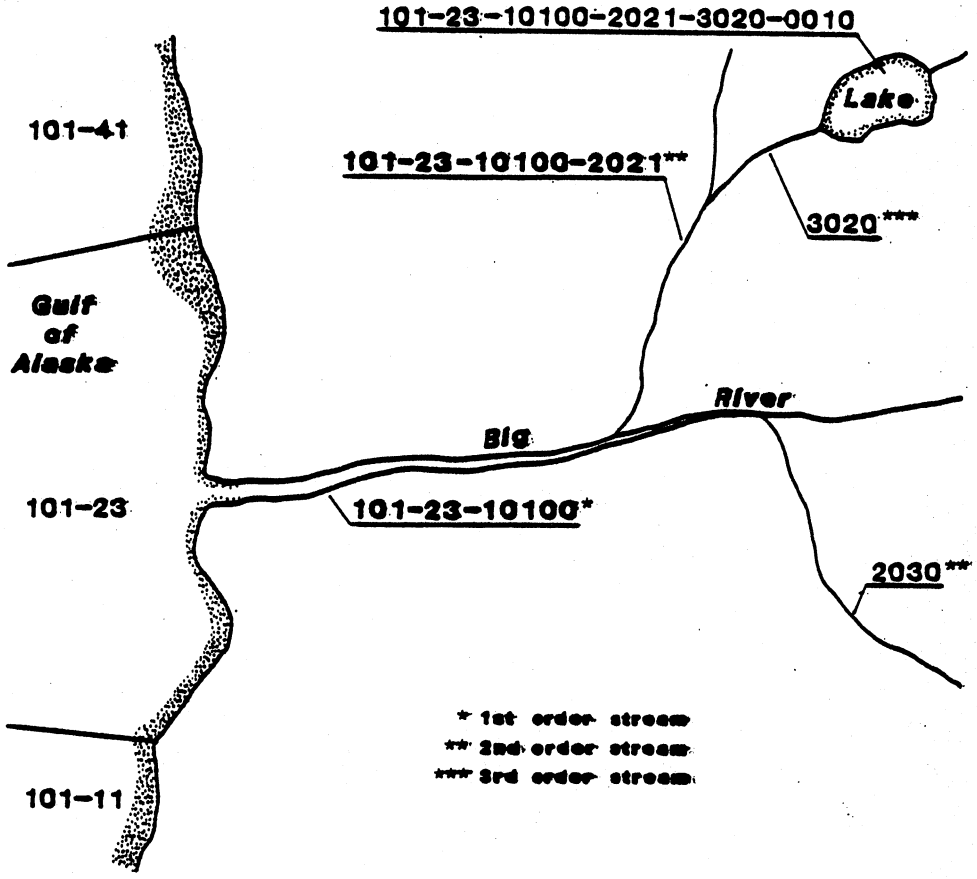

FIGURE 5
Example Of ADF&G Waterway Numbering System

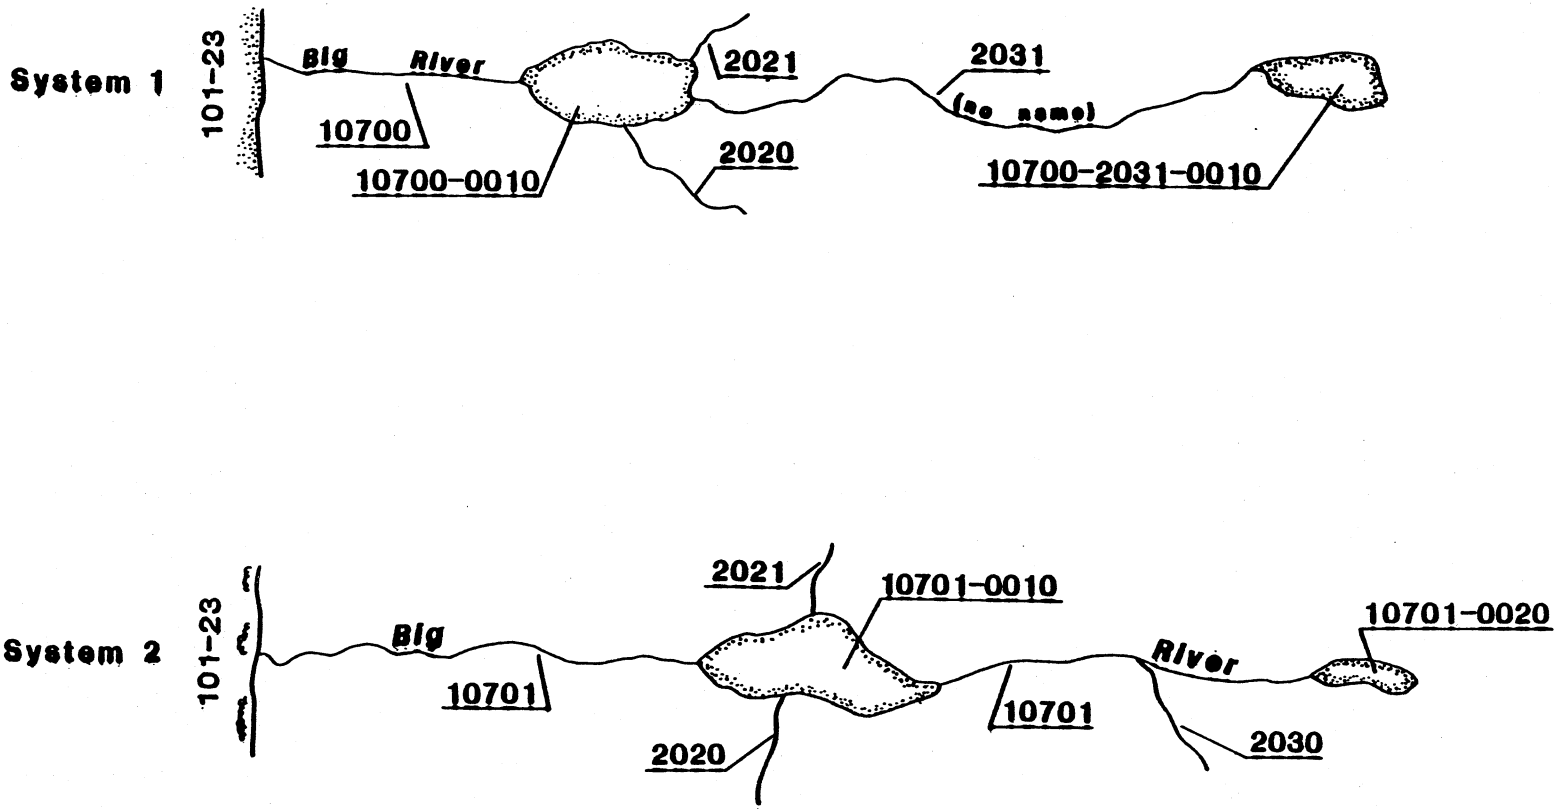

FIGURE 6

Numbering System For Lakes

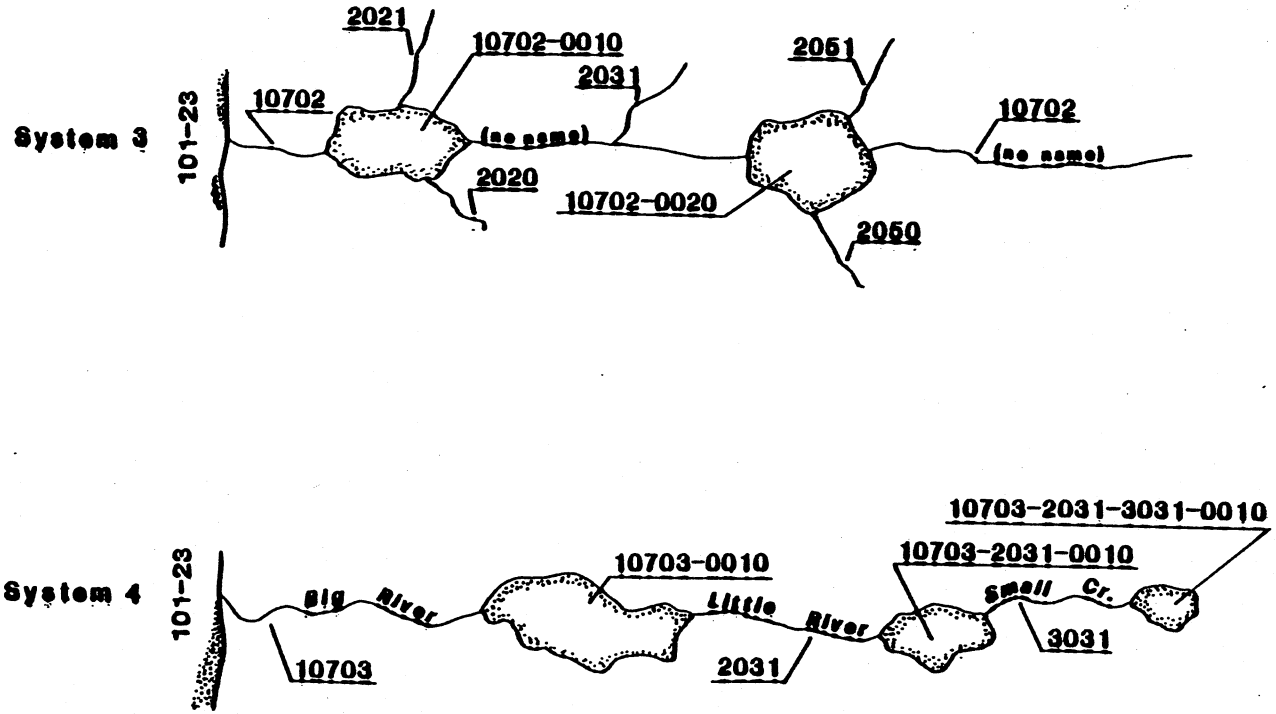

FIGURE 6 (Continued)
Numbering System For Lakes

order identifiers. The lake above the second order tributary has the same number as the secondary tributary, with an added lake number: 101-23-10700-2031-0010.

In the second lake-river system shown in Figure 6, Big River continues through a series of lakes. Therefore each lake is numbered with the tributary number 101-23-10701, and its unique lake number, 0010 for the first lake, 0020 for the second. Tributaries branching from either Big River or the lakes are designated with second order numbers added to the base number.

The river in the third lake-river system is not named, however it has a distinct main channel with tributaries. Therefore, numbering is the same as in the second system: each lake is numbered from the main channel with an added lake number (101-23-10702-0010 for the first lake, 101-23-10702-0020 for the second lake).

In the fourth example presented in Figure 6, Big River, Little River and Small Creek are numbered as first, second and third order tributaries, respectively. The lake above each tributary has the same number as the tributary below with an added lake number. In this example, the first lake (above the first order tributary) is 101-23-10703-0010, the second lake (above the second order tributary) is 101-23-10703-2031-0010, and the third lake (above the third order tributary) is 101-23-10703-2031-3031-0010.

Symbols Used on Maps

The legend on the bottom of each map contains the symbols for each fish species. The number on the lower left corner identifies the 1:63,360 scale quadrangle of the 1:250,000 scale quadrangle. (Numbers for the 1:250,000 scale quadrangles are identified in Table 1).

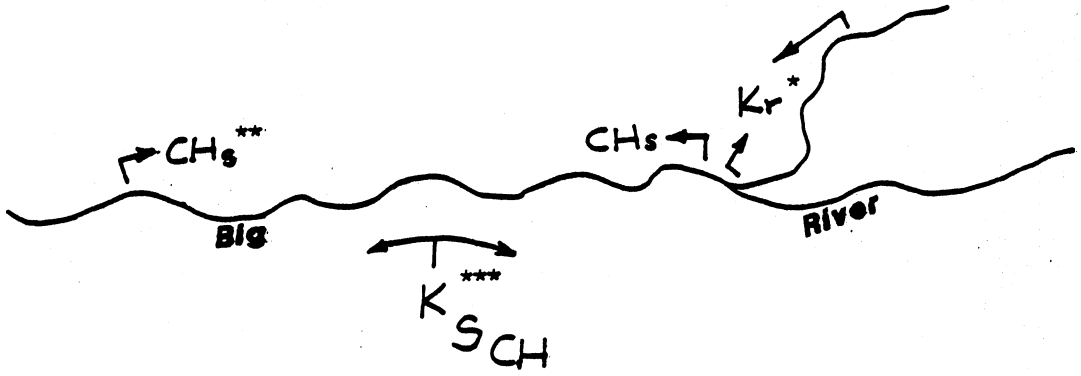
Arrows on the maps delimit the range of the fish (Figure 7). A single arrow at the beginning of the stream shows which fish migrate upstream. Arrows at upper regions indicate the highest point where the fish species are currently known to occur. Double arrows pointing in opposite directions are usually added to clarify information and to indicate that the range of the anadromous fish continues on to adjacent maps.

Sources of Information

Sources of information for this catalog were the ADF&G fishery atlases (1978), ADF&G field notes from each area and regional office, and various ADF&G individual reports. Additional information for Southeast Alaska was obtained from U.S. Forest Service and U.S. Fish and Wildlife Service field notes and the series Revised Anadromous Fish Stream Catalog of Southeastern Alaska (1977) by John Edgington, Robert Larson, Jim Eastwood and Paul Novak. Information from the Arctic-Yukon-Kuskokwim (AYK) Region was supplemented by Bureau of Land Management survey notes, and Index to Northslope Stream and Lake Surveys (1982) by Terry Bendock and John Burr. Data for the Southcentral Region were supplemented by the U.S. Forest Service and the U.S. Fish and Wildlife Service. Many Federal and State agencies and individuals contributed information and verified the anadromous fish data.

Limitations of Data

The inch-to-the-mile maps are used when available for the Anadromous Waters Catalog. Exceptions are in the Arctic and Southwest Regions where some 1:250,000 quadrangles have not yet been subdivided by USGS. Where inch-to-the-mile maps do not exist, anadromous fish streams are drawn on 1:250,000 quadrangles. These maps are folded and included at the end of each volume. The most recent editions of USGS maps were used for the Anadromous Waters Catalog; however, many of these maps have not been revised since the early 1950's.



* **Single arrows indicate King Salmon rearing in the tributary only.**

** **Single arrows along Big River indicate a specific Chum spawning area.**

*** **Double arrows indicate King, Chum and Sockeye continuing across the map and onto both adjoining maps.**

FIGURE 7

Delineation Of The Range Of The Fish Within A Channel

Locations of the stream reaches were described as accurately as possible but inaccuracies in the legal descriptions may occur because channel and coastline configurations have changed since the maps were published. As updated maps become available from USGS, the coordinates of the channels and coastlines in the Catalog which are inaccurate will be changed. In situations where the stream configuration has changed, permits are required for the present waterway, regardless of its actual distance from the mapped or legally described channel.

Virtually all coastal waters in the State provide important habitat for anadromous fish. Small tributaries, flood channels, intermittent streams and beaver ponds are often used for rearing. Because of their small size or ephemeral nature, these systems are often not included on 1:63,360 scale maps. Most surveys are conducted by aircraft for purposes of determining escapement to manage the commercial fisheries. The presence of juvenile fish and the actual upper limit of anadromous fish are not observed during these aerial surveys. Therefore, the upper points of stream reaches recorded on the fishery maps usually reflect the extent of fish surveys in a particular waterway rather than the actual limits to fish occurrence or of habitat use. In addition, only a limited number of the waterways in Alaska have actually been surveyed. It will be many years before ADF&G has surveyed all of the waterways in this vast State.

UPDATE PROCEDURES

The updating procedures of the Anadromous Waters Catalog allow for continuous revisions of the Catalog. Waterways can be added or deleted and the upper range of anadromous waterways changed as more current surveys document the presence or absence of anadromous fish. Proposals for additions or changes to the Catalog can be made by ADF&G personnel, private individuals and other agencies. All proposed changes or additions will be field checked or documented by ADF&G.

Proposals for revisions to the Anadromous Waters Catalog, including inclusion of newly identified anadromous waterways, deletion of waterways determined to not contain anadromous fish or changes to the upper points, should be submitted to:

Alaska Department of Fish and Game
Habitat Division
333 Raspberry Road
Anchorage, Alaska 99502

The waterway should be located on a 1:63,360 scale USGS map (or 1:250,000 scale if 1:63,360 scale is unavailable for the area). The map should show the mouth of the waterway and the upper known extent of the anadromous fish. All other quadrangle maps needed to delineate the specific uses of the proposed waterway should be included. The species using the waterway must be specified and the activities for which the waterway is used (migration, spawning, rearing, or overwintering) should be specified if known.

Changes to the Anadromous Waters Catalog will be made in accordance with the regulation adopting procedures of the Administrative Procedures Act (AS 44.62). It is anticipated that the Catalog will be revised annually, as necessary.

DEFINITIONS

For purposes of this Catalog, the following definitions are set forth:

1. "anadromous fish" means fish which enter fresh water from the sea for spawning purposes. This includes anadromous Dolly Varden, rainbow trout (steelhead), arctic char, sheefish, smelt, lamprey, whitefish, coastal cutthroat trout and salmon;

2. "anadromous fish stream" or "anadromous fish waterway" means a river, lake or stream listed in this Catalog and includes all sloughs and backwaters adjoining the listed waters, and that portion of the streambed which is covered by ordinary high water;

3. "catalog" means Catalog of Waters Important for Spawning, Rearing and Migration of Anadromous Fishes.

4. "lake" means a ponded body of inland water that has a restricted outlet or no outlet, and contains fish;

5. "migration" means the predictable, purposeful or seasonal movement of fish, unrestricted by other than natural influences;

6. "overwintering" means inhabitance by fish of a water body, including its substrate, at any time during October 1 through April 30;

7. "permit" means a habitat protection permit including an anadromous fish protection permit and any amendment or condition issued or approved by the Commissioner or his authorized designee, which has not expired or been suspended, or revoked; a permit constitutes approval of the plans and specifications required by AS 16.05.840, AS 16.05.870, AS 16.20.060, AS 16.20.260 and includes any activity authorized under AS 16.20.120-130;

8. "permittee" means the holder of a permit and includes anyone employed, contracted or assigned by the person to whom the permit was issued to conduct a land or water use operation;

9. "pollution" means causing alteration of a stream, river or lake to the extent that the water fails to meet the water quality standards of the Department of Environmental Conservation set forth in 18 AAC 70.010-110;

10. "portion of the streambed which is covered by ordinary high water" means the stream and the exposed stream bed and banks between the natural vegetation on both banks, except that if the stream is braided, the exposed stream bed and banks are delimited by the natural vegetation bordering the most distant channels;

11. "rearing" means the life phase of a fish from hatching until spawning, or any portion thereof;

12. "regional and area office" means the Alaska Department of Fish and Game, Habitat Division offices located as follows:

Region I

230 South Franklin Street
Room 301
Juneau, Alaska 99801

415 Main Street
Ketchikan, alaska 99901

Post Office Box 499
Sitka, Alaska 99835

Post Office Box 667
Petersburg, Alaska 99833

Region II

333 Raspberry Road
Anchorage, Alaska 99501

Region III

1300 College Road
Fairbanks, Alaska 99701

Pipeline Surveillance Office

1001 Noble Street, Suite 450
Fairbanks, Alaska 99701

13. "spawning" means deposition or fertilization of eggs, including preparation for deposition or fertilization.

INTERPRETATION OF THE CATALOG

Streams and Rivers

Each stream in the Catalog of Waters Important for the Spawning, Rearing or Migration of Anadromous Fish is listed on two lines. The first line contains the stream number and information about the location of the mouth of the stream. The second line lists the stream name (if known) and locates the upper point. Column headings occur at the top of each page. For example, the Salmon River (near Ketchikan) would be listed:

STREAM/LAKE	MAP SHEET	LAT./LONG	LEGAL
101-15-10500	Ketchikan D-1	55 54 30 130 1 39	C 69S100E11
Salmon River	Bradfield Canal A-1	56 1 33 130 4 15	C 67S 99E26

The first line gives:

1. the stream number (101-15-10500);
2. the quadrangle name containing the mouth of the stream (Ketchikan D-1);
3. the latitude-longitude of the mouth of the stream (55 degrees, 54 minutes, 30 seconds latitude, 130 degrees, 4 minutes, 15 seconds longitude);
4. the legal description of the stream mouth, given by meridian (C=Copper River), range (69S), township (100E), and section (11).

The second line gives:

1. the stream name, if known (Salmon River);
2. the quadrangle name containing the stream's upper point, if different from the quadrangle containing the mouth (Bradfield Canal A-1)
3. the latitude-longitude of the upper point;
4. the legal description of the upper point.

Lakes

Lakes are also listed in the Catalog on two lines. For example, Hidden Inlet Lake (in Southeast Alaska) is listed:

STREAM/LAKE	MAP SHEET	LAT./LONG	LEGAL
101-11-11000-0010	Prince Rupert D-2	54 59 15 130 24 1	C 79S100E30
Hidden Inlet Lake			

The first line shows:

1. the lake number (101-11-11000-0010);
2. the quadrangle name on which most or all of the lake occurs (Prince Rupert D-2);
3. the latitude and longitude of the approximate center point of the lake (54 degrees, 59 minutes, 15 seconds latitude and 130 degrees, 24 minutes, 1 second longitude);
4. the legal description of the approximate center of the lake, given by meridian (C= Copper River), range (79S) township (100E) and Section (11).

The second line gives the name of the lake, if known (Hidden Inlet Lake).

Lakes will not have mouths or upper points. Where a lakes occurs on several quadrangle maps, the quadrangle which contains the largest area of the lake will be listed.

The locational information (latitude-longitude and legal description) is taken from the U.S. Geological Survey quadrangle maps. Most of these quadrangles are now out of date, with many streams and portions of coastlines having been displaced. The maps may no longer accurately represent the true geographic location of the stream or lake. However, the locations provided in the Catalog are within the tolerances of the

USGS maps and the intent of the locational information is to avoid any ambiguity in referring to a specific stream or lake. Therefore, locations listed in the Catalog should be compared to the USGS maps and not to field surveyed or photo-extracted locations.
