INTRODUCTION

Purpose and Availability of the Catalog and Atlas

Alaska Statute 16.05.870(a) requires the Alaska Department of Fish and Game (ADF&G) to specify the various rivers, lakes, and streams, or parts of them that are important for spawning, rearing, or migration of anadromous fishes. Adopted by reference under 5 AAC 95.010 of the Alaska Administrative Code, The *Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes* (referred to as the "Catalog") and the *Atlas to the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes* (referred to as the "Atlas") are used to make this specification. The Catalog is a numerically ordered list of the water bodies with documented use by anadromous fish for these purposes. The Atlas shows cartographically the location of these specified waters, the anadromous fish species using these waters, and the fish life history phases for which the waters are used (to the extent known).

Protection of these specified waters is addressed by other sections of AS 16.05.870, which require persons or governmental agencies to submit plans and specifications to the department and, prior to proceeding, get ADF&G approval in the form of a Fish Habitat Permit for proposed uses, construction, and related activities that would take place in these specified waters. More detailed information about AS 16.05.870, the types of activities requiring permits, and the permit application procedures, is found on subsequent pages of this document

Copies of the Catalog may be obtained by contacting the ADF&G, Habitat and Restoration Division, Anchorage Regional Office at 333 Raspberry Road, Anchorage, AK 99518-1599 or by phoning 907-267-2285. Copies of the entire Atlas are available for inspection at Habitat and Restoration Division regional offices in Fairbanks and Anchorage and the headquarters office in Juneau. Copies of the regional volume of the Atlas covering a given region of the state are available for inspection at ADF&G offices in Bethel, Cordova, Delta Junction, Dillingham, Dutch Harbor, Glennallen, Haines, Homer, Ketchikan, King Salmon, Klawock, Kodiak, Nome, Petersburg, Palmer, Sand Point, Soldotna, Sitka, Tok, Wrangell, and Yakutat.

STATUES AND REGULATIONS

The Alaska laws summarized below form the basis for ADF&G's permitting program and role in regulating activities in specified anadromous fish-bearing waters; implementation of these laws is the purpose for which the department develops and maintains the Catalog and Atlas. These statutes and regulations are subject to amendment or repeal and should be regularly reviewed for possible changes.

Statutes

AS 16.05.870 requires ADF&G to "specify," or list, "the various rivers, lakes, and streams or parts of them that are important for the spawning, rearing, or migration of anadromous fish." It also requires anyone wanting to use, divert, obstruct, pollute, change the flow of, construct in, or operate a vehicle in these specified water bodies to contact ADF&G for written approval before beginning the construction, activity, or use. The department may require additional information in order for it to evaluate potential impacts to fish and game resources. Required information includes full plans and specifications for the proposed construction, activity, or use and for measures protecting fish and game resources affected by the proposed activity.

If the commissioner (or commissioner's authorized representative) determines that the plans and specifications provide for proper protection of fish and game, ADF&G Habitat and Restoration Division will issue written approval, in the form of a "Fish Habitat Permit," authorizing the proposed use or activity. In the case of a denial, the applicant may seek a hearing under AS 44.62.370.

AS 16.05.880 establishes that any person or organization beginning a construction or use without the commissioner's written approval is guilty of a misdemeanor. The statute also dictates that any cost associated with restoring the stream to its original condition is to be borne by the guilty party and is in addition to any penalty imposed by the court.

AS 16.05.890 establishes the ability for authorized department employees (i.e. Habitat and Restoration Division) to issue oral approvals to remove obstructions or repair existing structures without reviewing prepared operating plans in the event of an emergency arising from weather or stream flow conditions.

AS 16.05.895 establishes the penalty for causing material damage to spawning beds or preventing or interfering with migration of anadromous fish as a misdemeanor. Causing material damage or interfering with migration can be a direct result of a project or use or can occur through negligence or non-compliance with the approved plans and specifications.

AS 16.05.900 specifies that anyone violating AS 16.05.870 – .895 is guilty of a Class A misdemeanor. It further dictates that any proceeds from fines are to be deposited in the general fund of the state.

Regulations

5 AAC 95.010: The Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes, and its companion Atlas are the means by which ADF&G specifies the water bodies considered important for use by anadromous fish per AS 16.05.870. The Catalog and Atlas are adopted by reference under 5 AAC 95.010(a) of the Alaska Administrative Code. The permit application procedures,

definitions, and other information contained in the introductions of the Atlas and Catalog are also adopted by reference under 5 AAC 95.010(b).

Penalties

AS 12.55.035 specifies the fines for various offenses. Possible fines for a Class A misdemeanor resulting from a conviction for violating AS 16.05.870 - .895 include:

⇒ If a defendant is not an organization: A fine of up to $5,000.
⇒ If the defendant is an organization: Maximum fines of up to $200,000; or two times the pecuniary gain realized by the defendant; or two times the pecuniary damage or loss caused by the defendant to another, or to the property of another, as a result of the offense.

In addition to these fines, convicted defendants are liable for the cost of restoring the stream to its original condition (AS 16.05.880), may receive up to one year in prison and may be subject to civil fines or penalties. For details refer to the complete current text of AS 16.05.870 - .900, AS 12.55.035 and 12.55.135 and 5 AAC 95.010.

Other Fish Habitat Protection Statutes

AS 16.05.840 requires the construction and maintenance of a fishway for any dam or other obstruction built across a stream frequented by salmon or other fish the submission of plans and specifications for review and approval by ADF&G and that the structure be kept open, unobstructed, and supplied with enough water to maintain fish passage through it.

If a fishway is impractical, ***AS 16.05.850*** allows for the owner/applicant to compensate for the loss resulting from the dam or obstruction by providing a lump sum payment to the fish and game fund, construction of a new hatchery; or funding for expansion and maintenance of an existing hatchery.

AS 16.05.860 sets the penalties or fines for violating AS 16.05.840 and 16.05.850 and any regulations adopted under them. Owners of dams or obstructions who fail to comply with AS 16.05.840 or 16.05.850 within a reasonable time designated in a notice from the commissioner are guilty of a misdemeanor and subject to a fine of up to $1,000. The statute further notes that each day the owner fails to comply is a separate offense and that the dam or obstruction is a public nuisance and subject to abatement.

PERMIT APPLICATION PROCEDURES

Fish Habitat Permit

As outlined in preceding pages, a Fish Habitat Permit is required *before* any action is taken "to construct a hydraulic project, or use, divert, obstruct, pollute, or change the natural flow or bed of a specified river, lake, or stream . . ." or " . . . to use wheeled, tracked, or excavating equipment or log-dragging equipment in the bed of a specified river, lake, or stream . . ." [quoted portions from AS 16.05.870(b)]. This requirement includes, but is not limited to, construction, maintenance, repairs, or placement of structures, docks, bulkheads, road crossings (culverts, bridges, fords), stream diversions and bank stabilization projects; gravel removal; dumping any material into (or onto ice over) a water body; placer mining; water withdrawals or appropriations; the use of vehicles or equipment in the water body; and the use of explosives in or near the water body.

To apply for a fish habitat permit, the applicant must submit a completed application package to the appropriate ADF&G Habitat and Restoration Division office (see Contacts section below) at least 30 days prior to the start of work. Technical assistance is available in many instances. By including ADF&G early in the planning process, protection of fish resources can be included in submitted plans thereby reducing permit review time and the need for project changes. The package must include a written request, a completed Fish Habitat Permit Application, and any other necessary materials, including any relevant "other-agency" permit authorizations such as a U.S. Army Corps of Engineers permit application or an Alaska Coastal Project Questionnaire (see "Other Permittee Responsibilities" section below).

Information submitted with the application should be sufficiently detailed to fully describe the proposed activity and its possible effects on the specified water body and its fish resources. The following types of information should accompany the application where applicable:

- location of the water body;
- type of project (e.g., bridge, culvert, utility line placement, erosion control, water withdrawal, gravel removal, placer mining, etc.);
- project plans and description including drawings, description of methods, and list of equipment (i.e. design blueprints or plan drawings, survey data, description of water body at project site, description of planned work, erosion / sedimentation control methods, etc.);
- description of in-water use of wheeled or tracked vehicle (i.e. type and size of vehicle, surface bearing pressure, dates and frequency of use, etc.);
- description of proposed or anticipated stream diversions, channelization, or bank alterations including sequence of proposed work and any dewatering actions;
- description of any material removal from or material deposition into the water body including type & amount of material;
- description of proposed blasting or use of explosives including charge size, distance to water body and impact pressures;
- dates of the proposed work or use;
- other contractors involved in the project; and
- mitigation measures.

Habitat and Restoration Division personnel review the application materials and, where appropriate, issue permit approval for plans and procedures that have minimal or no harmful effects, including accumulative effects, on anadromous fish or their habitats.

In some cases, methods of operation that minimize effects on spawning and rearing areas may be required, or work may be restricted to certain seasonal windows to avoid interference with fish. In some instances, damage from a proposed use or activity may be unavoidable and the department may withhold permit authorization or, in its discretion require mitigation for loss of fisheries resource. This required mitigation may be different from any proposed by the applicant.

Permits for Unspecified Streams

In addition, a Fish Habitat Permit may be required under AS 16.05.840 for activities occurring in a water body or portions of a water body that are not specified in the Catalog and Atlas, but are frequented by anadromous or resident fish species. Procedures for obtaining a Fish Habitat Permit under AS 16.05.840 are the same as those outlined above for AS 16.05.870. The ADF&G recommends that you contact the appropriate Habitat & Restoration Division office if there is any question about whether your project requires a Fish Habitat Permit.

Other Permittee Responsibilities

The permittee must retain the ADF&G Fish Habitat Permit, including any permit amendments, on site during the permitted activity and the permittee is responsible for the actions of contractors, agents, or other persons who perform work to accomplish the approved plan. The permittee shall notify ADF&G and obtain written approval in the form of a permit amendment prior to beginning any activity that deviates from the approved plan. Making a final determination as to the significance of any devisation or modification and the need for a permit amendment is ADF&G's responsibility. Therefore, ADF&G recommends that a permittee promptly consult the Habitat and Restoration Division when considering deviating from the approved plan.

Depending on the types of activities or work proposed to occur in a particular water body, additional permits or authorizations may be needed from other state or federal agencies, local governments, or applicable land managers (federal, state, and private). It is the applicant's responsibility to make sure all necessary permits are obtained prior to starting work. Other entities that may require a permit include but are not limited to the U.S. Army Corps of Engineers, U.S. Environmental Protection Agency, Alaska departments of Environmental Conservation or Natural Resources, the Governor's Office Division of Governmental Coordination (DGC) and private land owners.

Contacts

Completed permit applications and requests for information or blank permit applications should be submitted to the appropriate ADF&G Habitat & Restoration Office for the area in which the project is located, as noted below.

Format

The Catalog and Atlas are divided into six volumes corresponding to Alaska's six fish and game resource management regions (Arctic, Interior, Western, Southwest, Southcentral, Southeast) established in 1982 by the Joint Boards of Fisheries and Game (see Figure 1). A figure on the front cover of each Catalog and Atlas shows the geographic area covered in that volume.

The Catalog is a numerically ordered list of the water bodies documented as used by anadromous fish. It also lists the quad map, latitude, longitude and legal description of the mouth and upper known extent of anadromous fish use for each specified water body.

The Atlas to the Catalog is a compilation of topographic maps which shows the specified anadromous fish-bearing waters and the known species and lifestage use.

Limitations

Location information (latitude/longitudes, legal descriptions) and graphic representations used in the Catalog and Atlas are derived from U.S. Geological Survey (USGS) quadrangle (quad) maps. ADF&G uses the most recent editions of these quad maps to depict as accurately as possible the locations of water bodies found in the Catalog and Atlas. The intent is to avoid any confusion when referring to a specific stream or lake. In some parts of Alaska, however, channel and coastline configurations have changed since the relevant USGS quad map was published, making it not entirely accurate for on-the-ground use. Locations listed in the catalog should be compared to the USGS maps, not to field-surveyed or photo-extracted locations. In cases where the water body configuration has changed, permits are required for the present water body, regardless of its actual distance from the mapped or legally described channel in the Catalog and Atlas.

In some instances, polygons are used to specify areas containing a number of water bodies supporting anadromous fish that are impossible to depict legibly and accurately on 1:63,360-scale maps. Generally used by juvenile anadromous fish for rearing, waters in these polygons are highly productive and are important for anadromous fishes. Any activity directly affecting waters in these polygons requires a Fish Habitat Permit.

Fisheries surveys are an important tool in managing anadromous fish habitat and sport, personal use, subsistence and commercial fisheries. Data are collected by various methods including aircraft, boat, and foot. Due to timing, water clarity, temperature, survey method or other factors, a survey for a particular species may fail to gather complete life phase information, or observe juvenile fish, non-targeted anadromous fish species, or the actual upper limit of anadromous fish use. Therefore, the upper points of stream reaches listed in the catalog and shown in the Atlas usually reflect the extent of fish surveys or known anadromous fish use in a particular water body rather than the *actual* limits of anadromous fish occurrence or of habitat use.

In addition, only a limited number of the water bodies in Alaska have actually been surveyed. Virtually all coastal waters in the state provide important habitat for anadromous fish, as do many unsurveyed tributaries to known anadromous fish-bearing waters. Anadromous fish often rear in small tributaries,

flood channels, intermittent streams, and beaver ponds. Due to the remote location, small size, or ephemeral nature of these systems, however, most have not been surveyed and are not included in the Catalog or Atlas.

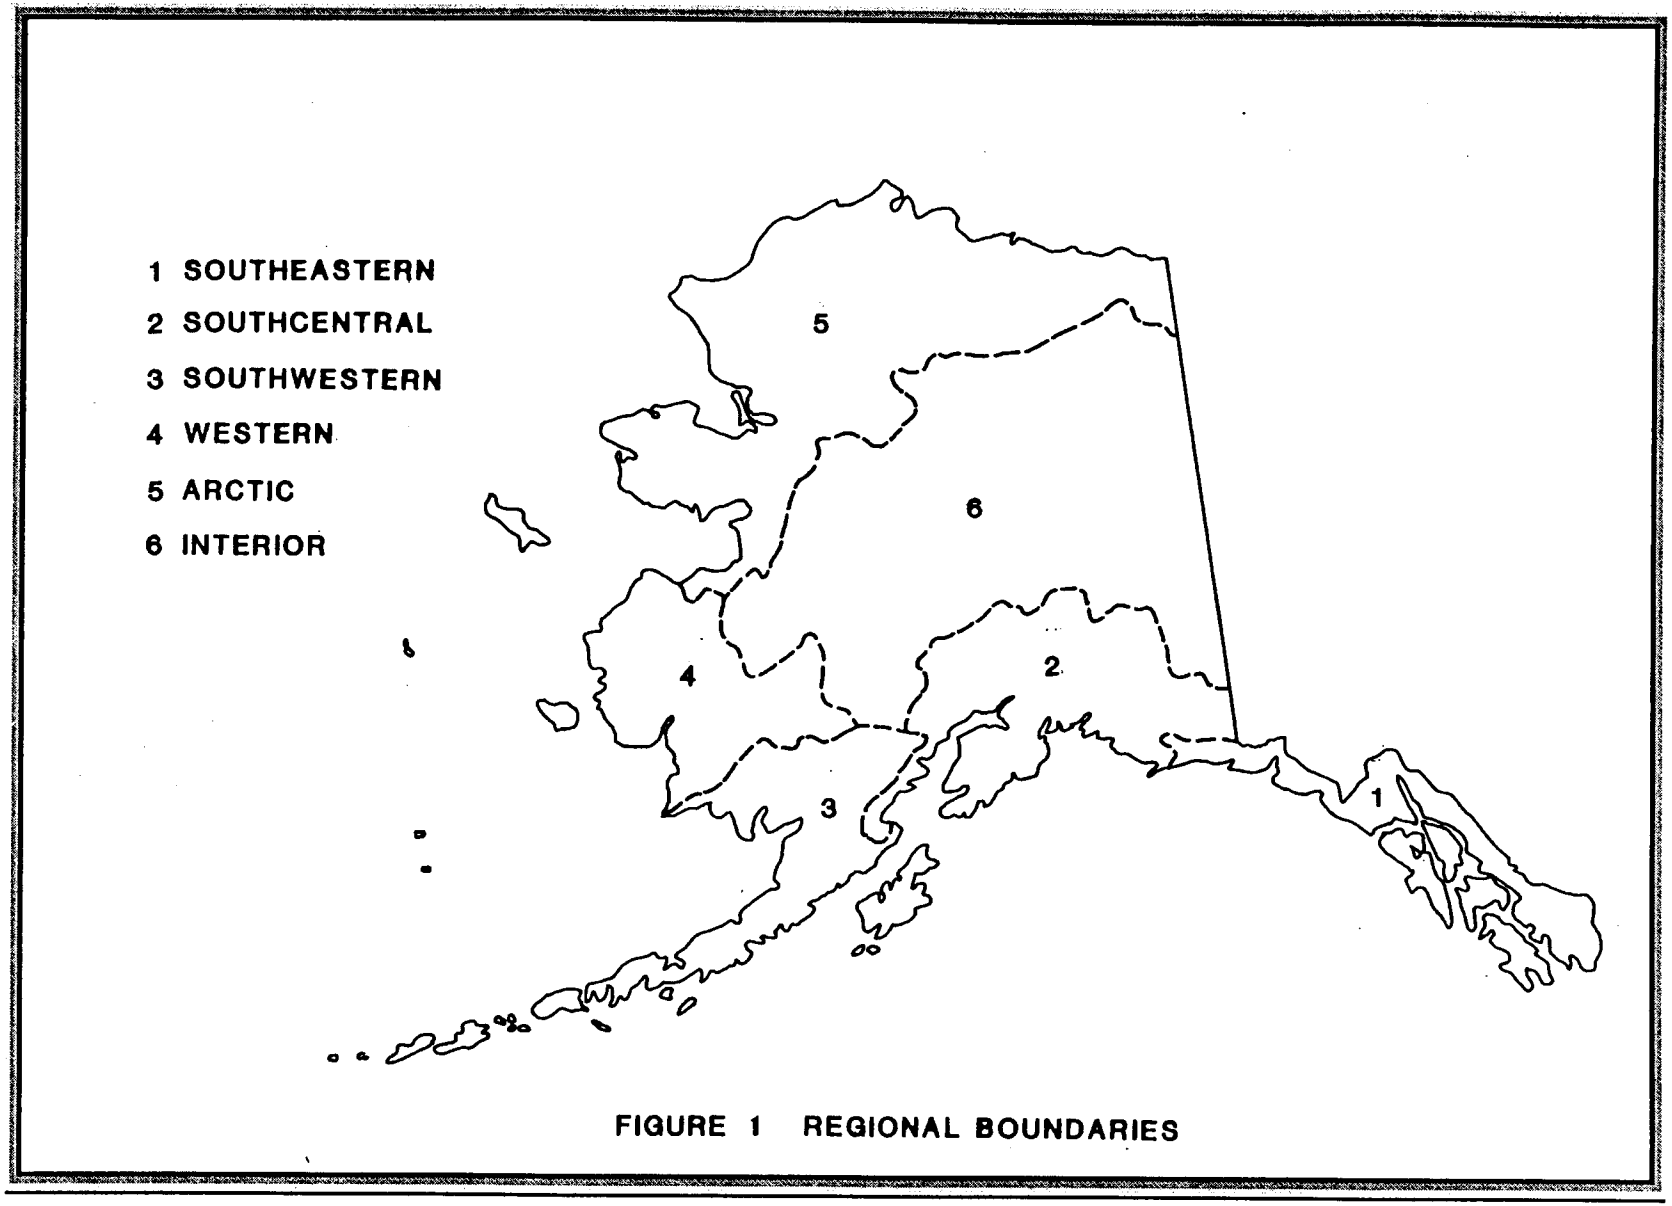

Figure 1. Catalog and Atlas Regional Boundaries

Interpretation of the Atlas

Alaska is depicted by 153 1:250,000-scale USGS quadrangles (see Figure 2). Most quadrangles of this scale are further divided into 1:63,360-scale inch-to-the-mile maps (*also* known as quadrangles). The Atlas contains the 1:250,000-scale quadrangles to help users locate anadromous waters information on the more detailed 1:63,360-scale map(s), if any exist for an area. Where inch-to-the-mile USGS maps do not yet exist (e.g., in parts of the Interior, Arctic Western and Southwest regions), specified waters are drawn on the 1:250,000-scale quadrangles.

Numbering of Specified Waters

Note: Examples given below refer to Figure 3.

All streams, rivers, and lakes specified in the Catalog and Atlas have a unique identifying number. The first six digits consist of a three-digit number and a two-digit number, separated by a hyphen. This number set is the 1982 ADF&G statistical fishing district number identifying the body of salt water to which the system drains. Although fishing district numbers used by the department's Commercial Fisheries Division have changed periodically since 1982, the numbering system in the Catalog and Atlas remains based on the 1982 statistical area boundaries in order to maintain a unique number for each specified water body through time.

First-order streams (which flow directly into salt water) are identified by a five-digit suffix added to the two-part fish district number into which the stream flows. For each first-order stream, this five-digit suffix begins with the number 1. For example, Big River (at the top of Figure 3) is "101-52-10100" (where "101-52" identifies the statistical fishing district and "10100" is the first-order stream in that district).

A stream branching from a first-order stream (i.e., second-order) carries the same base number (e.g., 101-52-10100) plus a four-digit number indicating that specific tributary. In the example, "2021" denotes the tributary that branches to the left (heading upstream) on Big River, making the entire number for this second-order stream 101-52-10100-2021. Third-, fourth- and higher-order streams are numbered in the same way by adding a four-digit number for each branch. The first digit for each branch sequence always indicates the stream order.

By convention, the last digit of a number sequence used to identify second- and higher- order streams will be even if the tributary branches to the right (heading upstream) and odd if it branches to the left. Due to limited space on maps, often only the number sequence of a specific tributary appears next to that tributary; however, the entire number sequence down to the statistical fishing district number can be determined by following the waterway. The Catalog lists the entire number sequence.

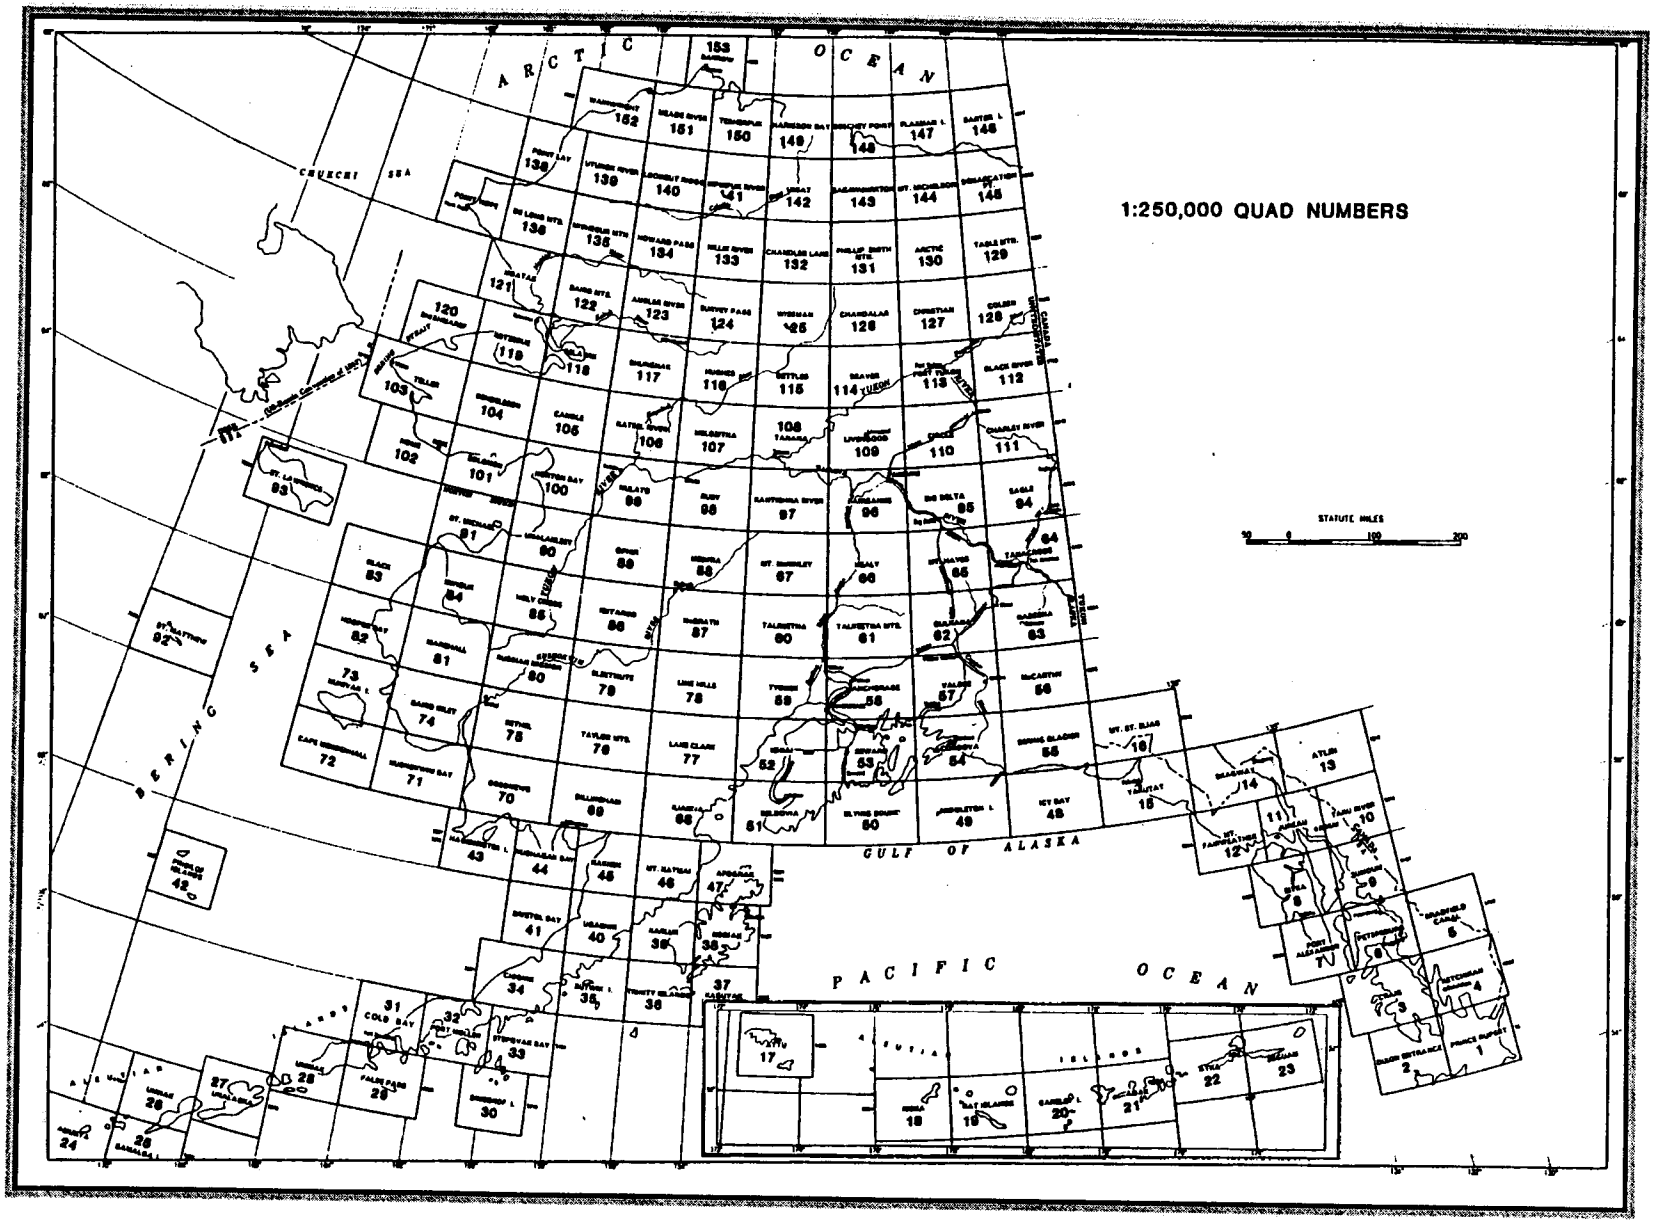

Figure 2. 1:250,000 scale quad names and numbers

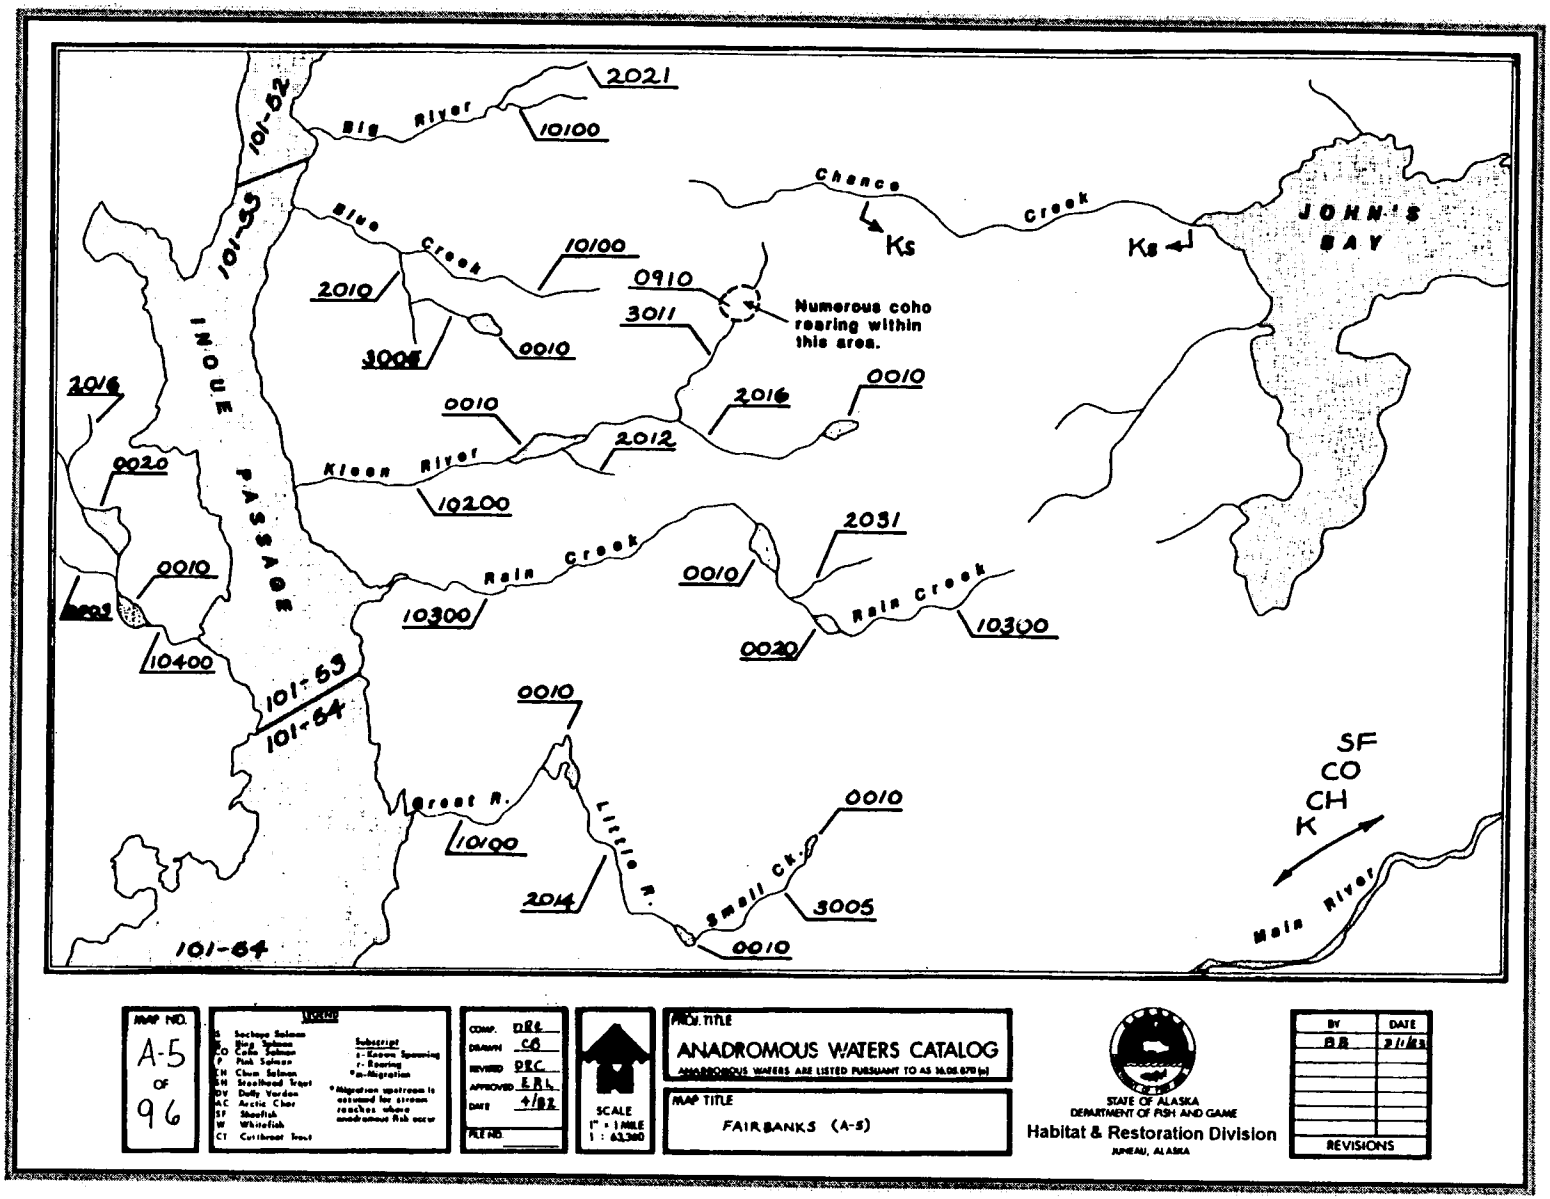

Figure 3. Examples of Atlas tream numbering

The number assigned to a lake begins with the number of the stream that drains from it, plus a four-digit number beginning with a zero. In Figure 3, a lake occurs along a third-order stream in the Blue Creek drainage. Its unique identification number, 101-53-10100-2010-3005-0010, consists of the third-order stream number (101-53-10100-2010-3005) plus the four-digit lake identifier (0010).

A four-digit number sequence beginning with 09 designates polygons. Used only in special cases, polygons will be numbered, whenever possible, with the stream number on which the polygon is located, followed by a 09xx polygon designation. In the example, a polygon adjoins a tributary to the Kleen River. The polygon's unique identification number would be 101-53-10200-2016-3011-0910, which is the stream number (101-53-10200-2016-3011) plus the polygon designator "0910."

Figure 3 shows four watersheds having multiple lakes and flowing to Inoue Passage. Each illustrates a different aspect of the water body numbering system. In the first example, a first-order stream is named "Kleen River," but the named river does not continue above the first lake. Kleen River is numbered 101-53-10200, for statistical fishing district "101-53" and first-order stream "10200." A lake identifier "0010" is added to denote the first lake upstream of Kleen River. Since all tributaries flowing into a lake retain the base number of the lake's outlet stream but add a *next*-higher-order stream identifier, the tributary to the first lake above Kleen River is numbered 101-53-10200-*2012*. Meanwhile, the headwater lake that drains into second-order tributary "2016" reflects that in its last two suffixes: 101-53-10200-*2016-0010*. Any streams flowing into this lake would be third-order and numbered accordingly.

In the second multi-lake example, Rain Creek passes through a series of lakes. Each lake is assigned the first-order stream number 101-53-10300, followed by a sequential and unique lake number, 0010 for the first lake, 0020 for the second. Tributaries to either Rain Creek or the lakes (none shown) would bear a second-order number after the base number.

The same numbering conventions apply to the third case, a system with unnamed streams (see left side of Inoue Passage): Each lake is numbered from the main channel, with an added lake number (101-53-10400-0010, for the first lake, 101-53-10400-0020 for the second lake).

In the fourth example, Great River, Little River, and Small Creek are first-, second-, and third-order streams, respectively. Each named stream is separated by a lake, to which it is a tributary. The lake above each tributary has the same number as its outlet stream but with an added lake identifier. In this example, the first lake (above first-order stream Great River) is 101-54-10100-0010; the second lake (above second-order tributary Little River) is 101-54-10100-2014-0010; and the third lake (above third-order tributary Small Creek) is 101-54-10100-2014-3005-0010. Alone the lake identifiers for these three lakes appears to be the same, however, combination with the outlet stream number provides a unique number for each.

Symbols

The alpha numeric in the lower left corner of the maps identifies the 1:63,360 scale quadrangle of the 1:250,000-scale quadrangle. (Numbers for the 1:250,000-scale quadrangles are identified on Figure 3.) The legend beneath each map lists letter symbols for each fish species and life activity. Some maps also include the symbol (♦) to depict streams for which the length of documented fish habitat is too short (less than 660 feet) to accurately map at the 1:63,360 scale. In most cases barriers to fish passage or limits of fish survey efforts account for the short terminus.

Arrows on the maps delimit the distribution of fish in a waterbody, where known. A single arrow drawn at the mouth of a stream or stream reach shows which fish species migrate upstream. Downstream-pointing arrows farther upstream indicate the highest point at which a fish species is currently known to occur (see symbols for king salmon spawning on Chance Creek, Figure 3).

A double-headed arrow is usually added to show that the range of a listed species continues onto adjacent maps (see notation for king, chum, and coho salmon, and sheefish migrating on Main River).

Interpretation of the Catalog

Water Bodies by Number

Each river, stream, lake, or polygon in the *Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes* is listed on two lines. The first line contains the water body number and information about the location of the mouth of the water body. The second line lists the water body name (if known) and locates the upper point. Column headings occur at the top of each page. For example, Grant Creek would be listed as follows:

Stream / Lake	Map Sheet	Lat.	Long.	Legal
101-75-10100	Bradfield Canal A-4	56 2 21	131 12 45	C 67S 92E 20
Grant Creek	Bradfield Canal A-5	56 6 31	131 20 40	C 66S 91E 33

In this example, the first line lists:

1. the water body number (101-75-10100);
2. the USGS map quadrangle containing the mouth of the water body (Bradfield Canal A-4);
3. the latitude-longitude of the mouth of the water body (56 degrees, 2 minutes, 21 seconds latitude; 131 degrees, 12 minutes, 45 seconds longitude); and
4. the legal description of the water body mouth, given by meridian (Copper River), township (67S), range (92E), and section (20).

The second line lists:

1. the water body name, if known (Grant Creek);
2. the USGS map quadrangle containing the water body's upper point, if different from the quadrangle containing the mouth (Bradfield Canal A-5);
3. the latitude-longitude of the upper point; and
4. the legal description of the upper point.

For purposes of data presentation in the catalog, lakes and polygons do not have mouths or upper points. Instead the location information contained in the first line reflects a point near the middle of the lake or polygon on the cited quadrangle map. If any portion of a lake occurs on several quadrangle maps, only one quad will appear in the first line. The lake or polygon name will appear on the second line if known.

Water Bodies by Name

To reference an anadromous water by name, use the alphabetical listing of those known named rivers, streams, and lakes as they are named on the USGS Quads in the back portion of the catalog.

Sources

Sources of information for the 1982 revision of the *Catalog and Atlas of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes* were the following:

ADF&G "Alaska's Fisheries Atlas" (1978);
ADF&G field notes from area and regional offices and various;
ADF&G individual reports;
U.S. Forest Service;
U.S. Fish and Wildlife Service;
Revised Anadromous Fish Stream Catalog of Southeastern Alaska (1977) by John Edgington, Robert Larson, Jim Eastwood and Paul Novak;
Bureau of Land Management survey notes; and
Index to Northslope Stream and Lake Surveys (1982) by Terry Bendock and John Burr.

Since the 1982 revision, the Catalog and Atlas have been revised regularly with information on anadromous waters being provided by various state and federal agencies, private companies, and individuals.

Update Procedures

Procedures are in place which provide for regular updating of the Catalog and Atlas. Water bodies, or particular stream reaches, can be added or deleted and the upper range of anadromous water bodies changed as more current surveys document the presence or absence of anadromous fish. Anyone can submit a proposal for additions or changes to the Catalog and Atlas. However, proposals from other than ADF&G staff may be subject to field verification prior to approval by ADF&G.

Proposals for revisions to the Catalog and Atlas should be submitted to the Regional Supervisor at the ADF&G Habitat and Restoration Division Regional Office for the region in which the water body is located (see contacts section, pg. 6). The proposed revision must include a nomination form, available through Habitat and Restoration Division regional offices, which lists the name and location of the water body, the fish species observed using the water body, the date fish were observed; the life stages (migration, spawning, or rearing) for which the water body is being used, if known; and any other clarifying information. The person submitting the proposed revision must sign the nomination form.

The location of water body and the upper known extent of anadromous fish use should be marked on a 1:63,360-scale USGS map or better. Field sketches or aerial photography are also helpful.

Changes to the Catalog and Atlas will be made in accordance with 5 AAC 95.010 and the regulation adopting procedures of the Administrative Procedures Act (AS 44.62). It is anticipated that the Catalog and Atlas will be revised approximately every 18 months.

DEFINITIONS

1. **"Anadromous Fish"** means a fish or fish species that spends portions of its life cycle in both fresh and salt waters, entering fresh water from the sea to spawn; these include the anadromous forms of pacific trouts and salmon of the genus *Oncorhynchus* (rainbow and cutthroat trout and chinook, coho, sockeye, chum and pink salmon), Arctic char, Dolly Varden, sheefish, smelts, lamprey, whitefish, and sturgeon.

2. **"Atlas"** means *An Atlas to the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes.*

3. **"Backwaters"** means a portion of the water body formed by an eddy along channel margins downstream from obstructions such as bars, rootwads, or boulders, or as the result of back-flooding upstream from an obstruction sometimes separated from the channel by sand or gravel bars.

4. **"Banks"** means the portion of the stream channel cross section that restricts the lateral movement of water at normal bank-full levels often exhibiting a distinct break in slope from the stream bottom.

5. **"Bed"** means the substrate, bounded by the stream banks, over or through which the water column flows.

6. **"Braided channels"** means the intertwined branches or secondary channels of a river or stream and characterized by the separation and rejoining of two or more channels separated by bars or islands.

7. **"Catalog"** means the *Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes.*

8. **"Distributary"** means a stream that flows away from, and does not rejoin, the main channel, and which usually flows to a sea, lake, stream, or other body of water.

9. **"Estuary"** means a semi-enclosed coastal body of water with a free connection to the sea and in which seawater is measurably diluted with freshwater derived from land drainage.

10. **"Lake"** means an inland water body, permanent or seasonal, occupying a basin or hollow in the earth's surface, which may or may not have a current or single direction of flow.

11. **"Mean high water"** means a tidal datum used in referring to tidelands or the tidally affected portion of the stream, that is equal to the average of all high tides over a 19-year Metonic cycle, as established by the National Ocean Service of the National Oceanic and Atmospheric Administration.

12. **"Mean lower low water"** means a tidal datum used in referring to tidelands or the tidally affected portion of the stream, that is equal to the average of the lower of the two low tides of each day over a 19-year Metonic cycle, as established by the National Ocean Service of the National Oceanic and Atmospheric Administration.

13. **"Migration"** means the predictable, purposeful, or seasonal movement of fish, unrestricted by other than natural influences.

14. **"Mouth"** means a line drawn between the seaward extremities of the exposed tideland banks of any stream channel(s) at mean lower low water; a stream or river may have more than one mouth by virtue of having more than one channel that empties into a receiving body of water.

15. **"Permit"** means the written approval by the commissioner of ADF&G or the commissioner's authorized representative, in the form of a Fish Habitat Permit issued by a regional or area office of the ADF&G Habitat and Restoration Division, of plans and specifications as required by either AS 16.05.840 or AS 16.05.870.

16. **"Pollute"** means altering the physical, chemical or biological properties of a stream, river, or lake to the extent that the water fails to meet the Alaska water quality standards set forth in 18 AAC 70.010 - .110.

17. **"Polygon"** means a geographic area of numerous water bodies or wetland areas that can not be accurately mapped at the 1:63,360 scale and which are important for the spawning rearing or migration of anadromous fish. These polygons are listed in the Catalog with single point identifiers and delineated on the Atlas maps by a dashed line boundary. All waters within these polygons should be considered specified anadromous waters.

18. **"portion of the bed(s) and banks, up to the ordinary high water mark"** means (1) in the non-tidal portion of a river, lake, or stream: the portion of the bed(s) and banks up to which the presence and action of the non-tidal water is so common and usual, and so long continued in all ordinary years, as to leave a natural line or "mark" impressed on the bank or shore and indicated by erosion, shelving, changes in soil characteristics, destruction of terrestrial vegetation, or other distinctive physical characteristics; (2) in a braided river, lake, or stream: the area delimited by the natural line or "mark," as defined in Part 1 above, impressed on the bank or shore of the outside margin of the most distant channels; or (3) in the tidally influenced portion of a river, lake, or stream: the portion of the bed(s) and banks below the mean high water elevation.

19. **"Rearing"** means the developmental life phase of a fish from fertilization of eggs to adult.

20. **"Regional and Area Office"** means the local area or regional office of the Alaska Department of Fish and Game, Habitat and Restoration Division. (Refer to the Contacts section of the introduction for office locations)

21. **"River"** means a stream of fairly large size flowing in a definite course or channel, or a series of diverging and converging channels.

22. **"Slough"** means (a) low, swampy ground or overflow channels where water flows sluggishly for considerable distances; (b) a side channel slough formed by channelization; (c) sluggish channel of water, such as a side channel of a stream, in which water flows slowly through low, swampy ground, or a section of an abandoned stream channel containing water most or all of the year, but with flow only at high water, and occurring in a flood plain or delta; (d) marsh tract lying in a shallow, undrained depression on a piece of dry ground; (e) term used for a creek or sluggish body of water in a bottomland.

23. **"Spawning"** means the deposition or fertilization of fish eggs, including preparation for deposition or fertilization.

24. **"Specified upper limit"** means the documented upstream limit of anadromous fish use as listed in the *Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes* or as depicted in *An Atlas to the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes.*

25. **"Specified Water Body"** means a river, stream, or lake, in its liquid or frozen state, its braided channels, distributaries, sloughs, backwaters, and estuaries, including the portion of the bed(s) and banks up to the ordinary high water mark, from its mouth to its specified upper limit as it is presently listed under 5 AAC 95.010 in the *Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes* or as depicted in *An Atlas to the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes.*

26. "Stream" means a natural or artificial watercourse containing flowing water at least part of the year, including a river, creek or tributary.
