OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Broad Whitefish	1981 (Bendock and Burr 1984)			See Below	<input checked="" type="checkbox"/>
Broad Whitefish	Netsch (1977), Hablett (1980)			See Below	<input checked="" type="checkbox"/>
Broad Whitefish	Moulton (2002)			See Below	<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:**  
The Kalikpik River (West Fork) is nominated from the upper boundary of cataloged anadromy (red creek channel) to the farthest connected upstream lakes in the Pik Dunes area. The general area of interest is outlined in black on the attached map. All lakes sampled for fish connected to the West Fork of the Kalikpik River have been identified to contain anadromous broad whitefish. The channels nominated are in blue, lakes nominated are denoted by red circles (sampled lakes) or blue polygons (inference). Blue polygon labeled lakes and associated channels are all directly connected to portions of the system with documented use or are passed through by fish when moving to upper areas with documented use. Most lakes sampled associated with the West Fork also support, lake trout and various whitefishes.

Add new stream & lakes w/ WP  
Extend Kalikpik R.
