OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Broad whitefish (BDWF)	Summer 2004			8	<input checked="" type="checkbox"/>
Broad whitefish (BDWF)	Summer 2003			3	<input checked="" type="checkbox"/>
Arctic Grayling (AG)	Summer 2004			1175	<input type="checkbox"/>
Arctic Grayling (AG)	Summer 2003			1394	<input type="checkbox"/>
Slimy Sculpin	Summers 03 04				<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:** This Ublutuoch River Tributary is nominated from its mouth to the lake at the headwaters of the stream identified on the attached map. there is a direct stream connection from the mouth to the lake. Catch data are from "Baseline Surveys of Fish Habitats in Eastern NPR-A, Summary Data Report, September 2003" prepared by MJM Research, 1012 Shoreland Drive, Lopez Island, WA, for ConocoPhillips Alaska, Inc. and Anadarko Petroleum Corp and 2004 unpublished catch data from Moulton (Data are attached). The stream was identified as F01 in the MJM 2003 report and is F0401 in the 2004 data summary. The creek is nominated upstream from the net sites because fish were captured moving both up and downstream at the net locations and because radio-telemetry work conducted by our office in the vicinity of the creek (Ublutuoch River) (Morris, 2003, Tech Report 02-03), in the Teshekpuk lake region (in-progress), and in the Prudhoe Bay area (Morris 2000), clearly indicate that broad whitefish use these systems to gain acces to warm wetland ponds and lakes such as those at the headwaters of this creek. Broad whitefish move into these systems right at or just post-break-up, some remain in head-water lakes for the summer and/or winter, but many spend a brief period in the creek and make a mass exodus as temperatures change. Given the high numbers of AGs in the catches it is likely that most BDWFs had already moved through.  
Add new stream and lake w/ WP

Name of Observer (please print): William Morris  
 Signature: [Signature] Date: 11/9/2004  
 Address: AK, Dept Nat Resources, OHMP  
1300 College Road, Fairbanks, AK 99701

This certifies that in my best professional judgment and belief the above information is evidence that this waterbody should be included in or deleted from the Fish Distribution Database.
