OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Chum Salmon	7/30/1987	1			<input checked="" type="checkbox"/>
Dolly Varden (juv)	7/30/1987		1		<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

**Comments:**  
 On July 30, 1987 an aerial survey (helicopter) of Fall Creek was conducted. One chum salmon was observed in the lower one mile of the stream at N 65.07 deg; W 165.84; NAD 83. One juvenile Dolly Varden was captured (75 mm FL) after 170 seconds of electrofishing at this same location.  
 Since GPS technology was not available at the time of this survey (1987) the coordinates were estimated off the original topographical map used during the survey.  
Only one fish of each species.  
Observations approx. 20 yrs old
