OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Pink Salmon	7/22/1987	x			<input checked="" type="checkbox"/>
Chum Salmon	7/22/1987	x			<input checked="" type="checkbox"/>
Dolly Varden (adult)	7/29/1987			x	<input checked="" type="checkbox"/>
Dolly Varden (Juv)	7/29/1987		x		<input checked="" type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat, locations, types, and heights of any barriers; etc.

Comments:

On July 22, 1987 an aerial survey (helicopter) of the Cobblestone River was conducted. Five hundred pink salmon and 10 chum salmon were counted in a reach extending from 1 mile downstream of the Oro Grande Creek confluence to the mouth. The coordinates shown on the map indicate the upper limits of pink and chum salmon spawning.

On July 29, 1987 adult Dolly Varden (365 - 590 mm FL) were caught at (N 65.01 deg; W 165.50 deg; NAD 83) in moderate numbers using hook and line gear. Dolly Varden fingerlings (47 - 114 mm FL) were captured using electrofishing gear. Fish of this size were abundant at the same coordinates given for adult Dolly Varden.

Since GPS technology was not available at the time of this survey (1987) the coordinates were estimated off the original topographical map used during the survey.

Observations made in 1987

Name of Observer (please print): Carl F. Kretsinger
 Signature: _____ Date: 9/28/2006
 Agency: Bureau of Land Management
 Address: 1150 University Ave.
