IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:
Broad whitefish were radio tagged in the Miguakiak (Mayoriak) River (outlet of Teshekpuk lake) and Teshekpuk Lake in 2003, 2004, and 2005 and in the Meade River in 2005. See attached map, Technical Report NO. 06-04, and January 2007 project update for details and additional justification.

Nominations are based on relocation data obtained between 2003 and 2006 via fixed wing aircraft.

This nomination adds broad whitefish spawning to the Ikpikpuk River in an area upstream from the confluence with the Chipp River to just downstream from the Price River. Spawning also appears likely above the Price River in the Ikpikpuk as well as in the Chipp River. See attached reports for further discussion.

add broad whitefish spawning to 330-00-10900
